and magnitude; then it suddenly the variations in a fixed period of 331 of our museums. days, 15 hours, 7 minutes,

the sun, we need not be alarmed test will happen many years hence. there should be a collision in our time. and the distance thereby calculated.

ing stars were really fixed stars and overwhelming annihilation.

WESTMINSTER ADDRY

How mysterious are some of the phe- tion with our atmosphere to a hear so nomena observed in the heavenly nodies intense that, in a few seconds from the How can we account for the variations first impact with the uir, they are reof some of the wars? As an example solved into gas. The average weight of the star Algol, in the constellation Per. these little bodies is estimated at about seus, for I days, 13% hours is a star of two ounces, but occasionally much larger decreases, and in 3% hours is diminished continue in an incandescent state for savcroases in brilliancy, and in a further presenting a most brilliant appearance. period of 19 hours again ariains its max. These are popularly termed meture. And imum. All this pakes place in 2 days, 21 occasionally yet larger bodies, of metallic hours, 49 minutes. Another star, Mira, origin, which have been wandering in the constellation Cetus, for 5 months through space for ages, come within the light gradually increasing for I months plungs, with deafening roar, into the and for 15 days it is equal to a brilliant soil. These are the meteorities, or "thunstar of the second magnitude, repeating der bolts" which may be seen in many

How absolutely regular and immutable We are accustomed to regard the so, als the laws which govern the move called "fixed stars" as being absolutely ments of the heavenly bodies! The earth stationary in the heavens, this, how, performs its journey of \$89,00,000 miles are in rapid movement. As an example, minutes, is seconds and % hundredths of Arcturus is calculated to move through a second, never varying probably the space at the productous velocity of no hundredth part of a second, and, from less than 197,000 miles an hour, or 51 miles, year to year, and from age to age, trayper second. In a century, therefore, this cilling over the exact position, relatively great star traverses no less than one hun. to the sun, it had previously traversed the rhighter star Vega, which is now and absolute punctuality that astronosuch a brilliant spectacle in the zenith, mers can calculate with unfulling accubut as that star is calculated to be more racy, and without the error of a fraction than 115,000,000,000,000 miles distant from of a second, astronomical events which

as even supposing Vegu to be advancing fixed and immutable laws would involve towards the sun at the same terrine us in overwhelming and appalling ruin. rate, the crash woul not take place until But He who formed these laws can also but may be reckoned as one of our tain fixed time, known not even to the neighbors, another bright star angels, but only to Himself, some such Capella, being reckoned to be more than divergence will take place; and this earth four times her distance. But the vast of ours will be burned up and destroyed; hody of the stars are plunged in the and, udging from what we have seen illimitable, fearful abyss of space, in. in other parts of the universe, we can finitely more profound and incal-utable assume that the final catastrophe will be distances, it being ony of the very near, caused by the impact of some great body est stars that the parallax can be taken. In space, whose course will by the Almighty flat be directed towards the A celectial phenomena which can given earth. Perhaps even at this moment the "shooting stars." It was more than on to involve, at the fixed moment, will the uneducated that shoot. world and all it contains, in fiery ruln

falling from their position in the "Seing that all these things shall be A BLESSING TO THE BABIES OF THE heavens, and a brilliant display such as dissolved, what manner of persons ought that of Nevember, 1895, (which will be we to be in all holy conversation and repeated in 1000, giver rise to consider, godilness; looking for and hasting unto able perturbation amongst the ignorant, the day of God, wherein the heavens. These brilliant visitants, however, are being on fire, shall be dissolved, and the the distribution of pasteurized milk, dethe sun, and through which the earth a third in the night in the which the will become general in the large cities Traveling by Steamboat has Been Made travels in the months of August Arai heavens shall pass away with a great of the United States. While this benev November, which rushing through space noise, ad the earth also and the works at an infinite speed, are raised by tree that are therein shall be burned up."
