FARM TOPICS

EASTERN OREGON FARM NOTES
From Department Industrial
Journalism U. S. C.

Federation in Demand

All fields of federation wheat should be carefully rouged for mixtures as certified seed of this variety will be much in demand next year. The increased price obtainable for good seed wheat will more than pay for the extra labor required.

How to Irrigate Spuds

Potatoes are best irrigated in such a manner that the water does not stand around the developing tubers. Ridges should be high and wide and the furrows narrow and deep to allow subbing without water standing around the plants.

Time for 30 day Spray

Because of the rapid advance of the season since the arrival of warm weather, the 30 day spray for codling moth will be due about June 5th to 12th. In many instances it will be possible to combine the usual 15 day spray with the 30 day spray and save one spraying.

Arsenate of Lead Gets Saw Fly

A spray of arsenate of lead, 2 lbs. to 100 gallons, on the foliage of the loganberries and raspberries is needed now where saw-flies are prevalent. An angle nozzle is necessary in order to reach the under surfaces of the leaves. To determine if the pest is present, before considerable damage results, examine the newer foliage for the small shot-like holes in the leaves. A careful examination of such leaves will show a small, light green, spiny caterpillar, rather hard to detect when young.

Cultivation Gets Morning Glories

The only known way to control morning glories in eastern Oregon is to keep them bladed off deeply and often enough that no leaves get above ground, thus starving the roots. If leaves get above ground for only a few days they will store up enough food to last for several weeks. Deep blading makes fewer cultivations necessary.

Clean Seed Wheat Pays.

If rye mixtures and volunteer bunches of wheat are pulled out of the part of the field to be sowed for seed, higher grading wheat for next year will be assured. The higher the grade, the better the price.

Solution for Cabbage Maggots

Corrosive sublimate, 1 to 1000, (that is 1 ounce to 12 gallons of water, applied at the rate of one-half cup about the base of cabbage, cauliflower and similar plants will give effective control for root maggots. Three applications should be made at 10 day intervals.

Dodder Killed By Sunburning

Dodder patches in alfalfa fields should be carefully cut out before haymaking time as the mower sickle often carries the dodder to new places in the field. After cutting, the patch may be sprinkled with crude oil or kerosene and burned, as that is the best way to insure the death of the parasites.

FARM WANTED—Wanted to hear from owner of a farm for sale. Give lowest price, and full particulars. L. Jones. Box 551, Olney, Ill. 11p

Wild Grass Reduces Crops

Tickle grass, needle grass, devil grass or wild chest as it is variously called, is a bad roadside weed in the then spreads to the neighboring field wheat and vitalia country. It matures early, the heads drop off, turn purple, and soon ripen. The seed and reduces the next years crop.

Movable Fence Easily Made

The best and handiest fence for hogs, dairy cattle or horses is made of good grade 26 inch woven wire stretched to well braced end posts and lightly stapled to heavy oak stakes driven between. Two men and a team can put up 100 to 150 rods of such fence a day and it is more durable and easily moved than any other type.

Leaf Worm is Troublesome

Current and gooseberry leaf worms are becoming troublesome in some sections by working on the leaves of these plants which are sometimes seriously defoliated by their depredations. A spray of arsenate of lead, two pounds to 100 gallons of water, applied now will control them. An angle nozzle is necessary in order to get the spray to the under side of the leaves.

Seed Fallacy Exposed

The old fallacy of changing seed potato stock is again being worked in Oregon. The best growers are getting good certified seed and sticking to it. Station circular No. 25 will aid anyone in growing and saving their own seed. This practice will save a lot of money now going to the seed potato shippers.

Russian Weed Dangerous

Russian Knap Weed, introduced in imported alfalfa seed, is a dangerous perennial weed which should be killed out where ever it makes its appearance. Great care should be taken to see that no alfalfa seed sown contains any of the knap weed seed.
