Jokes

It was a lesson on punctuation, and Edward was half asleep at his desk.

"Now," said the teacher, "If I say, 'I must leave as I have an engagement—By the way, what time is it?' I place a dash after engagement because the sentence is broken off abruptly."

At that moment she caught sight of the dozing boy.

"Now then, Edward, you are not listening. What was I saying?" she asked him.

"Please, Mrs. Crowder," said Edward, you said 'dash' because your engagement was broken off abruptly."

Mr. Lee in Science Class:
Scientists say that sleeping out-doors makes one beautiful. Can you explain it Doris?

Doris—(after some thought)—
No, but at last I know how to account for the hobo's charming complexion.

Mrs. Crowder:
If a cat in a well climbs up two feet and falls back one, how long will it take her to get out?

Maymie:
I have little or no interest in such a cat.

Mr. Mulkey—Frances, why were you late?
Frances—School started before I got here.

Truman—"I put a tack in teacher's chair yesterday."

Ethel—"Did you? I'll bet he won't sit down in a hurry again."

Truman—"No, and neither will I."

"Professor," said a graduate trying to be pathetic at party, "I am indebted to you for all I know."
"Pray do not mention such a trifle," was the unflattering reply.

Doris—"Pat was the goal of my ambition."

Dorothy—"Well, dear."

Doris—"F—F—ather kicked the goal."

OREGON PUSHES FORWARD IN COOPERATIVE MARKET

More Than Seven Million Dollars Worth Handled Last Year by Farmer Organizations.

The six state-wide cooperative marketing associations of Oregon now in business sold last year for their numbers more than 7 million dollars worth of farm produce. These associations are:

- Oregon Growers Cooperative association.
- Pacific Cooperative Poultry Producer.
- Pacific Cooperative Wool Growers association.
- Oregon Cooperative Hay growers.
- Oregon Cooperative Grain growers.
- Oregon Mint Growers Cooperative association.

The report of a committee on marketing that was adopted at the annual conference of the college extension service in October has been published and is available to those interested in this phase of successful farming. United States department of agriculture officers, extension men, county agents and station men joined in the report.

The marketing situation is first analyzed, plans, methods and results being submitted. Difficulties and how to prevent them is another phase.

Programs of work for producers, business men and extension specialists outlined, following a summary of accomplishments.

Cooperation with existing marketing agencies is advocated.

Producers, business men or others needing the report may get a copy on request to Paul V. Maris, director of extension, O. A. C., Corvallis.

BETTER CROP AND TILTH BY STRAW AND ROTATION

Grain straw disked in to the land in a manuring experiment started last spring at the Oregon Experiment station resulted in better moisture and tilth during the summer than was obtained on an adjacent plot that did not have the straw application. The yield of clover hay was increased 1.47 tons, giving a total yield at three cuttings of 6.83 tons an acre. The yield of four check plots averaged 4.36 tons. All the plots received two irrigations which made possible a good second and good third cutting.

Manure disked and plowed in, is giving better yields than where it is disked in after plowing or used as a top dressing. In this experiment, straw can be scattered out and disked and plowed in, in the fall or it may be spread thinly after seeding as a top dressing.

Beans in a manured rotation gave a yield of two and one-third bushels per acre over unmanured beans, in the same kind of rotation on the same soil. The gain amounted to \$7 per acre.

SMALL POTATOES MAKE CHEAP FEED FOR PIGS

Cull potatoes, either raw or cooked, make an excellent food for swine. Cooking greatly increases the food value. It is always desirable to feed grain with the potatoes—one pound to every four pounds of cooked potatoes, or one pound of grain to two pounds of raw potatoes. At this season of the year, and particularly this year, there are considerable quantities of cull potatoes which may be readily turned into money by feeding to swine. If the grain and potatoes are the only feed given a small self-feeder containing tankage or fresh fish meal will be found a profitable investment if placed where the swine may have free access to it. —O.
