As the crowd dispersed the Skoubo family sang "Home, Sweet Home" in Danish.

FOREST SERVICE ANNOUNCES SALE OF TIMBER IN IDAHO

A sale of lodgepole pine from the Moose Creek district of the Targhee National Forest in northeastern Idaho is announced by the Forest Service, United States Department of Agriculture. The stand in question is estimated to contain 1,800,000 railroad ties and some saw logs and mine timbers.

The timber, which is very old and contains considerable defect, was sold at the rate of 8 1-2 cents for each railroad tie, 50 cents per thousand board feet for saw logs, one-fourth of a cent per linear foot for mine timbers, and 25 cents per cord for fuel wood.

The total estimated volume to be cut in terms of board feet is 62,000,000. The selection or partial cutting system will be followed and the brush disposed of as is the usual

is the inspiring roar of Old Ocean and the charm of its many beaches where those glorious VACATION haunts are. It will be a great surprise and delight to see the vast improvements that have been made to insure the pleasure of visitors to

practice of the Forest Service in cutting this type of timber. All of the young and thrifty trees will be left standing and only the mature trees will be removed.

FARM POINTERS

Farmers in some 1,200 counties kept accounts of the expense, labor, farming enterprises for 1922, according to reports to the United States Department of Agriculture, and by means of these accounts made analyses of their business, with the assistance of their county agricultural extension agents, to determine how to increase their net incomes over a period of years.

Foods containing two per cent to five and one-half per cent crude fiber are suitable for fattening pigs. Foods running ten to fifteen per cent fiber are bulky concentrates satisfactory for cattle or horses but not for pigs unless mixed with large quantities of more concentrated feeds.

Lack of sunflower palatability seemed in test by the farm crops department to be due to lack of proper fermentation. It can be overcome by adding 20 to 25 per cent corn to the sunflowers when put into the silo. The dairy department has not tested this out in its investigations.

For red spider mite control sulfur in some form is the standard. A liquid is generally used but dust may be effective when temperature is high and the mites have not spun their webs too tightly.

Wilted potato plants should be rogued out of the field designed for certification. If it is a case of plain wilt the plants on each side are best taken out, as the disease spreads through the soil and is almost sure to infest plants closer than two feet.

The cherry fruit fly comes out of the ground as Royal Ann cherries are turning red—just about this time. This is the only time it can be controlled—while it is buzzing about the tree and licking up the honey dew. The fly is two-thirds the size of the common house fly, dark with yellow head and legs and cross band or picture on the wings. The following sweetened poison bait spray will "get it." Lead arsenate a half pound; molasses or syrup—never honey—two quarts; water 10 gallons. This is enough for about 50 trees.

Walt Mason says: "Oh, every fly that skips our swatters will have 5,000,000 sons and daughters and countless first and second cousins; of aunts and uncles, scores and dozens and fifty billion nieces—so knock the blamed thing all to pieces." And isn't it the truth? All together, swat, swat, swat.
