BOARDMAN, MORROW COUNTY, OREGON, FRIDAY, FEBRUARY 8, 1924.

OIL TO COMBAT SCALE

Some of the commercial fruit dis tricts of Washington, Arkansas, and Missouri have, in the past few year experienced the same discouraging results with the use of lime-sulfu for combating San Jose scale as ha been the experience of the past a son here in the Walla Walla Valley Incestigators at the Washington Experiment Station are of the opinion that the abundance of scale in that district-the Clarkston area-is pro-bably largely do to a natural vigor possesed by the scale as evidenced by its positive tolerance to lime-sulfur. Judging from the careful manner in which some of our infested orchards were sprayed last spring, we can readily believe that the findings of the Washington Station apply epually as well to the Walla Walla Valley as to the Clarkston area only a short distance to the north of us. Whether or not this condition will be repeated this spring remains to be seen, but such has been the experience of the Growers of the Ozark regions for the past three years. In our or a district we might do well to prove by their experience.

During the summer of 1921 entire orchards were wiped out by ravage of the scale in Arkansas. The U.S. Bureau of Entomology came to the rescue with the introduction of oi emulsions used in the orange districts of Florida for citrus scale. Carefu checks of results showed nearly on hussed per cent control of scale the oil as compared with only With eighty per cent control using lime sulfur. There was some doubt a that time as to the safety of using oil on the trees year after year but reports as late as September of the past year agrees as to its success.

Repeated use each year on citrus trees in Florida has shown no ill efon the bark. Whether or no it will prove equally as safe on apple prune, peach, or cherry trees year in and year out can not yet be deter mined.

Observation have shown that the engine--oil emulsions used in these experiments are too strong for the leaves of the stone fruits such a prunes, peaches, apricots, and cherries but are harmless to the leaves of the apple excepting on very hot days -over 90 degrees temperature.

Thus it has been found that, al though their use on the stone fruit, must be confined to the dormant sea son of the tree, they may be used in the "delayed dormant" season o. the apple trees .- the period just fol lowing the dormant season and it which the buds are unfolding, ex posing the young leaves. Apple or pear trees, then can be freed from the scale, leaf roller, aphis, and spid er-mite all in one spray by waiting aphis, and spider-mite provided the

Noted Army Chaplain Pleads for Babies

Rev. Dr. John W. Beard, pastor of the Mount Tabor Presbyterian church, Portland, chaplain of Portland post of the American Legion and chaplain of one of the companies of the famous 91st Division overseas, is a strong champion of the campaign to save German children from starvation and never loses an opportunity to say something for that cause.

"We fought and conquered the German militarists," said the noted chaplain, "but, as Major-General Henry T. Allen, commander of the American troops on the Rhine during the occupation, said, 'We never fought children.' We helped win the war as such, but, as when we were fighting the enemy, we bound up his wounds if captured, we now shall bind up the terrible wounds inflicted by war's awful fury against those little ones who suffer so. Let's help feed them, by all means."

Air in Rooms Usually Is Too Dry for Health

Most authorities agree that the factors that distinguish good from bad air are proper temperature, proper humidity and adequate movement. The tem perature of rooms for health is about 72 degrees Fahrenheit, Most Americans like the temperature much higher and complain of feeling chilly when It is at this level.

Why? The principal reason is that the air is too day. Dry air means that excessive evaporation of moisture takes place from the skin, mouth and nose, and this evaporation takes heat away from the body. The worst combinations between temperature and humidity are cold damp air, warm moist air and excessively dry nir artificially warmed.

The comfort zone lies between GS and 70 degrees Fabrenheit, with a humidity between 30 and 55 per cent. The average indoor room in winter has a humidity between 15 and 22 per cent, and to offset the great loss of body heat which this causes the temperature is kept far too high .- Hygein.

One of Jock's Tricks

from work, found a young owl which

Civil War Artillery Man Meets His Target SAVE GERMAN CHILDREN

In wars soldiers aim to get the Strong Oregon Committee Works For enemy. But when a war is over a soldier is glad his shot missed the target . For the purpose of raising \$100,000 as he comes face to face with an in Oregon as a part of a fund of enemy he missed,

C. Stuart Patterson, the veteran lawyer and bank president, told friends a many who are facing starvation befew days ago of a personal experience of that kind,

Mr. Patterson was a member of that Philadelphia battery which embraced so many men, who afterward became distinguished, including besides himself John G. Johnson and "Hans Breitmann," celebrated humorist, says Girard in the Philadelphia Inquirer. In the Gettysburg campaign, Mr.

Patterson's battery was sent to Carlisle. The guns were posted in the centers of the town where now runs the railroad.

Gen. "Baldy" South, in elvillan dress, was on the job and strolled out to reconnoiter the position of the Confederate mivance, Returning to the town he walked up

to the Philadelphia artillerymen and said: "There is the enemy, half a mile in that direction. You may begin firing." It was in that engagement Mr. Pat-

terson was wounded. Years afterward he met Gen. Fitzhugh Lee, who said:

"Had you almed your shots a few feet to the left of where they first fell you would have killed Gen. 'Jeh' Stuart and myself. We had a close cull."

"That is one time," replied Mr. Patterson, "I am glad I completely missed the mark."

Wanted the Rest of It

The bouseholder, answering a knock at the door, discovered a poor Jew who the previous day had begged a walstcoat from him.

"Does the kind gentlemans remem her," said the Jew, "that he gave me a valateout ye terms? Vell, I found five-pound not - to der teocket." "Upon my word," said the house

older, "you are an honest man. Cominside, sir." While the Jew was enjoying the

duss of wine and eigar immediately found for him, the householder said "Of course, you have brought the vaistcoat back?"

> "No," replied the Jew. "I haf comto beg for der coat and trousers."

Old Helicopter Model

A model of a belicopter from plans drawn 80 years ago by Sir George Cayley was constructed recently by Paul Gerber, custodian of airplane models in the National museum at Washington. The design, although conceived years before an airplane flew, is strikingly similar to those of recent helicopters, and aeronautical engineers assert that with a few modifications based on modern aircraft principles a large machine construct ed on the original plans undoubtedly would fly .- Popular Science Monthly.

Needing Heat!

First Leviathan Was Failure

The first attempt to provide transattantic travelers with a vessel that, in size and magnificance, would be a fonting botel, was made in the building of the Great Eastern. The launchng of this huge ship, for some time salled the Levinthan, was commenced November 2, 1837, but owing to the difficulty of moving the enormous weight, the vessel was not finally ationt until early in 1858.

The secret of managing so large a tinor had not yet been learned, and the Great Eastern was from the first a white elephant to her owners. Her only real service was in the laying of Atlantic caldes. She made her last voyage 35 yours ago, and was then disposed of as junk. The ploncer Leviathan had a length of 692 feet and a tonnage of 27,000 .- Detroit News.

BIG PACKAGE

until the delayed dormant period and in the summer can be sprayed with the same material for scale aphis, and spider-mite provided th work is done in the heat of the day at times of extreme weather.

Certain grades of lubricating oils. emulsified with a solution of a case in spreader in water, compose the only ingredients of the stock solution This solution will not corrode the parts of the spray rig, does not inritate the skin as does the lime-sulfur can be used with alkali water without gumming or forming a sludge in the spray tank, the oil will not separate and come to the surface when used in a tank which has also contained lime-sulfur, spreads out evenly on the bark of the tree, and can be made by the grower at approximately one-third the cost of commercial lime sulfur.

Directions for preparing these lubicating-oil emulsions may be obtained from the CountyHorticultural In spector at Milton. In time for the dormant spray on the stone fruits in March a considerable puantity will be made and put out at cost to any who wish to give it a trial. This will be continued throughout the season as long as there is a demand for it Arrangements will be made for it distribution at that time on the Umatilla Project also.

Meeting at Irrigon

A number of club people from Umatilla went to Irrigon last Saturday night to a joint meeting of the clubs. An interesting meeting was held and the need of a new bridge across the Umatilla river, and the ways and means to get it were fully discussed. An address was made by Mr. Perley, fuel expert for the O-W. R.& N.Co., in which he told of the needs of the railroad and of the farmer. Samuel H. Boardman of Boardman also was present and told of his efforts to have trees planted along the state highways. The highway commission is acting with him in this matter and has furnished 2000 trees to be planted at once.

After the regular business meeting a lunch was served and a pleasant social hour followed, then dancing until a late hour. Those from Umatilla were Mr. and Mrs. Roy Paulu, Mr. and Mrs. B. S. Hughes, Mr. and Mrs. W. R. Nugent, Mr. and Mrs. W. P. Llewellyn, Mrs. C. C. Peck, Mr. and Mrs. Carl Brownell, D. R. Brownell, E. C. Brownell. Art Hammond was present with the railroad officials, Mr Perley, fuel expert, and Walter Guilds, assistant superintendent.

had failen from its nest. He picked up the injured bird, carried it home, fed it, and at last placed it in a cozy corner of the kitchen fireplace. In the early morning Jock's mother

came down into the kitchen to get breakfast ready for the family, and was startled by the strange object. But die soon recovered from her alarm. for she was accustomed to the many tricks of young Jock.

"That's our Jock at his pranks again!" she smilled. "He's gone and put a beak on the kitten."

IRRIGON AND UMATILEA DELE-GATION GO AFTER NEW BRIDGE With a delegation from Irrigon and Umatilla of such large proportions that the county commissioners met the bridge caravan in the circuit court room Tuesday and listened attentively to the plea for the new Umatilla.

The commissioners lent a very sympathetic car to the plea of the delegation and there was not the slightest note of opposition to the construction of the palpably needed bridge across the Umatilla river.

However, the county hasn't the noney for the work, nor can the funds be raised right now.

The commissioners promised to try to get the state to advance the costs of a new bridge and let the county repay its half as soon as it could, and with the favorable attitude already manifested by the state commission. we have every reason to feel that this proposition will be accepted.

The estimated cost of the bridge is \$60,000 for one level with the highway and \$40,000 for one high enough to be safe from the back waters of the Columbia but not up to the grade of the highway.

The need of a new bridge is not gainsaid and with both the state highway commission and the county court in favor of it, everything points to an early solution of the difficulties in the way of financing the construction.

Everyone who attended the meeting is buoyed up with hope of the ultimate and not far remote action on this important link but at present eyesore of the highway.
