In hill selecting next year's potato seed hills that show green and look vigorous later than the average are recommended by the experiment station for improvement in the Oregon potato crop. The leaves should be normal for the variety with no unusual wrinkling or mottling, indications of mosaic. Mosaic leaves have small areas less green and more yellow than the healthy leaf. Sometimes these leaves appear to have thin spots in them. Plants with uniform, green, smooth leaves are the best. They may be staked now and dug later or dug now and put into crates for storage on cooling out. Seed selection pays in the commercial field and is particularly valuable for next year's seed plot.

The outlook for exhibits at the Pacific International Live Stock Exposition at Portland, Ore., is extremely good this year. A number of famous herds from the East and middle west are coming, without fail, and others signify their intention of showing at the great Pacific slope event. Among the herds promised is that of Milking Shorthorns, owned by Donald Woodward of LeRoy, N. Y. It is expected that J. O. Singmaster will be out with his fine Percherons, and very likely will bring some of the other great draft horse breeders with him. The special train which brot priceless animals across the continent last year created such favorable notice and made such extraordinary time that it is highly likely to be duplicated this fall. This feature bids fair to become an annual event, and each year the train, like the Exposition, will be "bigger and better."
