You'll like our clothes. Pauserud's. 46-tf

PEPPERMINT PARAGRAPHS
Growing of mint in large tracts on the Klamath reclaimed land is now assured. Land that is suitable for celery, onions, etc., is not always best mint land, but the best mint land is always the best celery and onion land. Only 17,500 acres of mint in the United States now, and Wrigley alone consumes the mint oil from 12,000 acres. There will be several hundred acres of mint land in production within a year.

The reclaimed land belonging to L. Jacobs, and comprising over eighteen quarter sections is all the best kind of mint land.

CHARGED WITH VIOLATING POSTAL LAWS IN THE CONGRESSIONAL RECORD

WASHINGTON, D. C., Oct. 25.—Republican Leader Mondell today introduced a resolution calling for the expulsion of Representative Blanton, of Texas. The resolution charged that Blanton had inserted matter in the Congressional Record that was unfit for publication and in violation of the United States postal laws. It was agreed to bring the matter up for consideration Thursday of this week, owing to the absence of Representative Blanton today.

NORMAL INCOME TAX SECTION PENDING BILL WITHOUT RECORD

WASHINGTON, D. C., Oct. 25.—The normal income tax section of the pending compromise tax bill was adopted today by the senate without a record vote. The section provides for a continuance of the present 4 per cent tax rate on incomes of \$4,000 or less and 8 per cent on incomes exceeding \$4,000. An increase of from \$2,000 to \$2,500 in exemption for married men with incomes of \$5,000 or less, provided for in the pending bill, was adopted. Married men also may be allowed an additional exemption of \$400 instead of \$200, for each child.

A collection of birds stuffed by Theodore Roosevelt, while a student at Harvard, is now owned by the University of Indiana.

REIMER ADVISES ON SELECTION OF APPLE EXHIBITS

(Continued from Page 1)
well-grown fruit of the variety in shape, size and color. A Newtown, a Spitzenburg, a Jonathan and a Delicious each have a characteristic form; hence in selecting get specimens as near the characteristic type of the variety as possible. The size of the fruit should be typical of well-grown fruit of the variety, not too large nor too small. Some people have the impression that very large fruit is most likely to win first prize. The latest fruit seldom wins because it is not typical. A Newtown the size of a cocoon is interesting, but it is a monstrosity, not a first-class fruit. Newtowns and Spitzenburgs which will pack from 100 to 150 per box are more representative of that variety than larger or smaller fruits. The specimens should be well colored for the variety. A typical Newtown is greenish or greenish yellow. At least 75 per cent of a Spitzenburg, a Jonathan or a Delicious should be covered with red with the remainder of the fruit an attractive yellow.

Uniformity
Most exhibitors fail because the five specimens on the plate or those in the box lack uniformity. The individual specimens may be perfect, but there is too much variation between them. They may vary in size, form or color. A company of soldiers in uniform looks better than in civilian clothes; and a company uniform in size better than a lot of giants and runts mixed. In some orchards most of the Newtowns are roundish in form, and the orchardist should select all of this type. In other orchards most of the fruits are oblong and here this type should be selected. Don't place round and oblong or round and flat apples on the same plate or in the same box. Not only is uniform fruit of better appearance, it is a requisite in the modern commercial pack. In the recent pear show the final division in several of the exhibits, where the fruit otherwise was perfect, was won by the more uniform plates. You would not buy a box of cigars with long and short or thick and thin cigars in it.

Freedom From Defects
All specimens should be free from frost marks, spray injury, branch rubs, bruises, cuts, stem puncture or abnormal russeting. These are not part of well-grown fruit. Never permit a fruit without a stem or with a broken stem to go on exhibit. Such fruit looks like a rooster's tail or with a broken tail feather, not leave any portion of the spur or leaves attached to stem. These are parts of the tree and not the fruit. Leaves go well with bouquet, but not with edible fruit.

Freedom From Pests
The modern fruit grower free himself in producing fruit free from insect and fungous pests. The modern epicure also does not relish codling moth and San Jose with his apples. There is nothing repulsive to the fruit judge that is so repulsive to the modern epicure as a codling moth hole in plain view. But often the judge finds a codling moth hole and the excreta in the calyx where it is overlooked by the casual observer or careless exhibitor. This means a worm inside gnawing at the vitals of the apple and later disgusting the unlucky purchaser, and certainly injuring the market. Such fruit is a menace to the fruit industry, a reflection on the grower and a victory of a tiny codling moth over superior man. For this reason the stem end and especially the blossom end should be critically examined in selecting your fruit, and in case your eyes are not keen, use a hand lens. Remember that while the codling moth usually does not camouflage matters, he often digs in the most inaccessible places and in the most invisible manner. The fruit judge prides himself in finding such an enemy.

Examine the apple carefully for scab, since a scabby apple can no more win in a fruit exhibit than a scabby man in a love affair. Sometimes a scab is no larger than a pin-

head, nevertheless it is scab. If in doubt, throw it out. The judge will use a hand lens in examining such spots and he will not give you the benefit of the doubt. To summarize: Select fruit typical of the variety in size, color and type; all the specimens as uniform in size, color and degree of ripeness as possible; free from frost marks, spray injury, rubs, bruises, hail pecks, cuts, stem punctures and abnormal coloring; and, above all means, free from pests, such as codling moth, San Jose scale, scab, rots, blister mite, mildew and dirt.

Come to the exhibit room after the exposition, on a day which will be announced in the press, and learn why you received the prizes or failed. Remember that the chief object of the exposition is its educational feature. If we are not already producing the most perfect fruit in America, we should learn how to do so. We have the soil and the climate; all that is necessary is for man to do his part. Don't fail to make an exhibit, even if you have only one variety. Often the smallest grower produces the best fruit. The community and the industry need your co-operation. Show the valley what you can do, learn what others are doing. You will be well repaid.

FOUND—A yearling Hereford steer. Owner may have same by bringing charges. Phone 470-L.

WANTED—The loan of an oiler to heat the salvage room. Improvement Club. Telephone 370-R.

ugly hole made by the codling moth or the fiery red blotches painted by the San Jose scale. The judge is unmerciful when he scores such fruit. It is admitted that no fruit grower will exhibit fruit with a conspicuous codling moth hole in plain view. But often the judge finds a codling moth hole and the excreta in the calyx where it is overlooked by the casual observer or careless exhibitor. This means a worm inside gnawing at the vitals of the apple and later disgusting the unlucky purchaser, and certainly injuring the market. Such fruit is a menace to the fruit industry, a reflection on the grower and a victory of a tiny codling moth over superior man. For this reason the stem end and especially the blossom end should be critically examined in selecting your fruit, and in case your eyes are not keen, use a hand lens. Remember that while the codling moth usually does not camouflage matters, he often digs in the most inaccessible places and in the most invisible manner. The fruit judge prides himself in finding such an enemy.

MYSTERIOUS PAINS AND ACHES

Make Life Hard to Bear For Many Ashland Women.
Too many women mistake their pains and aches for troubles peculiar to the sex. More often, disordered kidneys are causing the aching back, dizzy spells, headaches and irregular urination. Kidney weakness becomes dangerous if neglected. Use a time-tried kidney remedy—Doan's Kidney Pills. Hosts of people testify to their merit. Read an Ashland case:

Mrs. S. A. Eddings, 259 B St., says: "I know the value of Doan's Kidney Pills and gladly recommend them. Some time ago my kidneys were out of order. I became run down and had no energy. My back was weak and lame and ached dreadfully. The action of my kidneys was irregular, also. Doan's Kidney Pills soon relieved the aches and pains and put my kidneys in good condition." Price 60c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Eddings had. Foster-Milburn Co., Mfrs., Buffalo.

Co-operation with Business Men
ONE of the important functions of the modern bank is keeping in touch with its patrons in business, and letting them know market and trade conditions. The officials of the First National often are enabled to give valuable information to customers. Their outlook is broader and more comprehensive than that of private individuals.
