AND NELLIE M. BEAVER MARRIED

The home of Mr. and Mrs. A. M. beaver, on Iowa street, was the scene of a very pretty wedding last evening at 8:30 o'clock, when about 50 people gathered at the invitation of Mr. and Mrs. Beaver to witness the marriage of their daughter Nellie to Edward M. Stannard.

The affair was the culmination of an attachment dating back to the high school days of the bride and groom, a fact which gave the wedding a somewhat unusual interest for many of their friends. Ideal weather and a wealth of June floral furnishings combined with other happy circumstances to make the occasion a rare one.

Preceding the ceremony, Miss Florence Allen sang with appropriate feeling. De Koven's beautiful composition, "O Promise Me." Mrs. Helen Walker Mack, at the piano, contributed a delightful portion of the evening's musical needs.

Accompanying the opening strains of Mendelssohn's wedding march, the bridal party descended the stair, led by the Rev. C. A. Edwards, followed immediately by the four bridesmaids, and they in turn by the bride, escorted by her father. The groom and his best man, Mr. Meredith Beaver, met the procession under a floral arch, where the impressive ring ceremony was read by Rev. Edwards, and concluded by a short prayer offered by Mr. John Beaver. an uncle of the bride.

The bride was dressed in a lovely gown of white crepe and silver lace. with draperies and veil of plain silk net. She carried a bouquet of white roses and sweet peas, while her attendants carried pink roses with white.

Those who did honor as bridesmaids were the Misses Minnie Beaver and Amy Stannard, sisters of the bride and groom, and the Misses Winifred Spencer and Jessie Thatcher, intimate friends of the bride.

Following the ceremony delicious refreshments were served on the lantern-lit lawn, by Mrs. Beaver and her daughter, Mrs. Walter Herndon, assisted by Mrs. Stanley Robinett, Miss Calla Biegel and Miss Vida Bradshaw. This portion of the evening was enlivened by the arrival of a band of unbidden guests, who, after receiving royal treatment at the ice cream table, retreated in Rae, glass dish, Miss Duncan, Grants BIG LAKES COMPANY TO

their friends. They will make their home in California, whither they departed late in the evening.

PRIZE WINNERS AT

Following is a list of prizes, the donors and the winners of the same, the telephone company employes:

Medford; Elhart's drug store, perfume, Martha Foster, Ashland; Porter's confectionery, two boxes cigars, Mr. Vance, Medford; Dickerson's SHASTA DIVISION GETS PRIZE paint shop, furniture polish, Mrs. Aikins, Ashland; Stock's, picture. CIRCUIT WITH GRID LEAK RESISTANCE

Takes Place of "C" Battery-How Impedance of Flow Is Determined.

Fig. 13 shows a set of curves for a three-electrode vacuum tube circuit will flow when any given pressure containing a grid leak resistance as is applied depends upon how much shown in Fig. 11 instead of a "C" battery with the same symmetrical by the friction of the particles of alternating difference of potential ap- water against the sides of the pipe plied to the grid circuit.

There being no "C" battery poten-

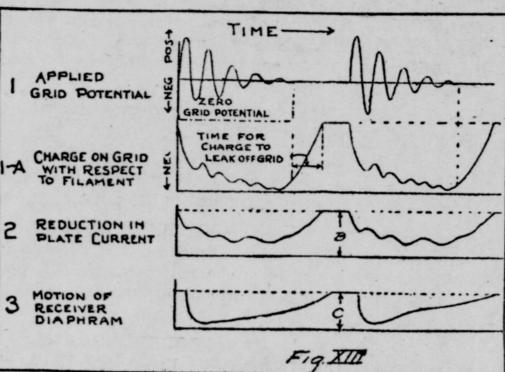

would soon collect a sufficient negative charge to reduce the plate current to zero and the tube would cease

negative charge to collect on the grid, resulting in a very small plate current reduction and weak response in the telephone receivers.

will be approached.

In any electrical circuit that has a difference of potential applied to it, the current that will flow depends 5 1/4 per cent interest. upon the "impedance" of that circuit; just as in the flow of water through BEND FIRM MAY INSTALL a pipe, the quantity of water that the flow through the pipe is impeded and against one another.

In the electrical circuit, the relatial applied to the grid, the grid in tion between these three quantities Fig. 11 is normally at zero potential is that the current which will flow with respect to the filament. As the is equal to the applied differences of positive half of the first cycle of the potential divided by the impedance, alternating difference of potential is where the current is in amperes, the impressed upon the grid circuit—see applied difference of potential is in Fig. 13-the grid is made positive volts and the impedance in ohms. On

with respect to the filament. Being | transposing this equation the impedpositive with respect to the filament, ance is equal to the applied voltage attracted and caused to give up their internally between the filament and white sweet peas, and were gowned negative charges to the grid. During the plate, when the grid is at zero in dainty pink organdie. All floral the next or negative half of the cycle potential, is an important constant of decorations were likewise pink and of the applied grid potential the grid is made negative with respect to the ternal plate impedance. filament but does not lose the electrons again. Thus a negative charge is built up on a grid during the positive portion of each cycle, the cumu- of the telephones that will give best lative effect of which is to produce a results when connected in the plate decrease of the plate current, during circuit of that particular tube. the period that the alternating differis applied to the grid,

If no grid leak were used, the grid which is determined by the design.

causes a certain number of electrons, divided by the current. The impedwhich are negative charges, to be ance of a vacuum tube plate circuit, The internal grid impedance of a

vacuum tube used in a radio set as a detector determines the impedance

It is then not only the resistance of ence of potential called a wave train a pair of telephones, but also the inductance and the distributed capacity After the alternating difference of of the winding that cause the maxipotential applied to the grid has mum current to flow in the felephones ceased, the grid does not immediately for a given change in grid potential. lose its negative charge. The grid The Internal plate impedance of a leak forms a high resistance path for vacuum tube varies only slightly with the negative charge of the grid to different plate voltage. It is more an leak off down to the filament slowly. inherent characteristic of the tube
