coarse and rough. This is a mechanical condition that we maintain in milling, as it influences palatability and digestibility materially. This friable mash allows the hens to eat it readily and is never pasty; also, the digestive fluids are able to work on the loose mass more efficiently, thus insuring higher digestibility. This is one thing, together with the superior quality of ingredients of the mashes that makes it possible for OLYMPIC egg mashes to produce better and more uniform results. There is no surplus of unavailable protein to overtax or poison.

ASHLAND MILLS

# Bond Weasure Indorsed

Believing it to be of vital importance to Jackson County and to Ashland, that the Ashland-Klamath Falls Highway be completed at the earliest possible moment, and knowing that Klamath County has voted \$300,000 for the completion of the Klamath end of this road. we, the directors of the Ashland Chamber of Commerce, urge every citizen of Jackson County to vote YES authorizing \$100,000 bonds for the completion of this road, and for building the bridge at Gold Hill.
