**ALWAYS A GROWING CONCERN**

Impossible to Set Boundaries That Shall Confine the Growth of the English Language.

William Shakespeare's vocabulary was about 15,500 words. John Milton needed only 8,000 different words for "Paradise Lost," while the Old Testament has fewer than 6,000 different words. Some people use only about 800 different words, and most of us get along with between 2,000 and 3,000. A few years ago some peasants in rural England, farm laborers, were found who used about 300. Prof. Max Muller (1823-1900), the great Oxford philologist, who was perhaps the greatest authority of his age on this subject, put the number of words in the English language at 100,000. "If we include all the words which have fixed places in the dialect of the country," says "The Book of Knowledge," "and include also many which we know were spoken in earlier times, we shall have to put the total at 400,000 for the English language." The number is constantly growing. When a new dictionary was made, some years ago, it was found that the new words necessary for use in relation to electricity and electrical appliances numbered over 4,000. A similar increase had taken place with regard to other arts and sciences.

**HOW TO FORETELL WEATHER**

Simple Observation All That is Necessary to Know What the Heavens Will Furnish.

To be a good weather prophet is often a great convenience to yourself and others. Here is a simple and reliable way of telling if rain is coming during the day. As early as possible in the morning go out and search the sky for the smallest cloud that is in sight. Keep this under close observation for five minutes or so and note whether it alters in size. If the cloud gets smaller one can be almost certain of a fine day. On the other hand, if it increases in size, rain will surely come in a few hours. Where the cloud remains the same size no special change in the prevailing weather is likely to take place. If the cloud increases very rapidly thunder is almost a certainty. In the summer, alteration in the size of clouds is connected with the state of the atmosphere. When the air is very dry and rain is unlikely, the clouds soon vanish; if the atmosphere is charged with moisture, the masses of vapor increase and this will soon be discharged in the form of rain.

**Oil-Well Adventure.**

An oil well that is being dug to any considerable depth usually has a twenty-inch casing in the upper part and a small, slender man could get down in one of that size. In fact, such a feat was recently performed near Los Angeles by Walter McCay of Taft, Cal., who is known as the "human gopher." A master rotary bushing had been lost in the well and the only way in which it could be got out without destroying the well was to send a man down after it. The tool was lodged at the 110 foot level. McCay was lowered into the well with a one-inch rope and wore a gas mask attached to an oxygen tank from which air was pumped to him constantly. It was necessary for him to make six
