Local and Personal

Marriage Is Reported—Edward O. Steiger and Miss Mary Agnes Bennett, both of Ashland, were married here last Monday, Justice Bagshaw officiating.—Jacksonville Post.

For the best enfil. Try Rose Bros. 74tf

For sale at Needlecraft Shop, baby doll sets, garden sets, bloomer suits. 80tf

Edwards to Serve Time—The supreme court at Salem recently affirmed Judge Calkins in the case of State vs. "Shine" Edwards, who appealed from conviction on bootlegging charge. Edwards was sentenced to serve three months in the county jail and to pay a fine of \$400. He is at Liberty on \$1000 bonds, and now resides at Weed, Calif. As soon as the mandate is received from Salem, he will be taken into custody.

Home grown almonds and walnuts, 25 cents a pound. Plaza Market. 85tf

Better be safe than sorry. See Beaver Realty Co. about your insurance. Phone 68. 287ti

Klamath Man Is Sentenced—Patrick Bishop, 22, who was arrested in San Francisco and brought back to Klamath Falls to answer to the charge of passing bad checks, was sentenced to the state penitentiary for three years by Judge A. L. Leavitt.

WIRE WHEEL SERVICE at Lee-don's Tire Hospital. Broken spokes replaced 25c. 84tf

Make your clothes a Xmas present of a cleaning and pressing. Ladies work a specialty. Ashland Cleaning and Dyeing Works. Phone 63. Auto delivery. 84tf

License Plates Arriving—Some of the Ashland motorists have received their new auto license plates for 1923, and are rejoicing over the nice clean appearance of the new plates. They are made with white figures and letters mounted on a dark blue background.

Narcissus bulbs, 15 cents each, at ELHART'S. 85-3

Complete sets for dolls at Needle-craft Shop—Coats, suits, caps, etc., reasonably priced. 80tf

Here to Visit Son—Mrs. F. E. Miller arrived in Ashland Friday for a visit with her son, J. V. Miller, and family of Hargadine street. Mrs. Miller has been staying with another son, who was employed by the Southern Pacific at Weed, but has now been transferred to Klamath Falls.

Why not buy her a Singer Sewing Machine for Xmas. \$5 down and \$3 per month will put one in your home. Singer Sewing Machine Co., 10 So. Fir St., Medford.

Last month the Automobile Specialist insured three trucks, six automobiles and 10 Fords. Phone 274-J. Yeo, of course. 84tf

Grandchild Had Croupy Cough "My grandchild could get no relief whatever from a very bad croupy cough," writes Peter Landis, Meyersdale, Pa., "until I gave him Foley's Honey and Tar. It is a great help for chest and throat trouble." Coughs, colds, croup, throat, chest and bronchial irritation quickly relieved with Foley's Honey and Tar. Contains no opiates—Ingredients printed on the wrapper. Stood the test of time serving three generations. Sold everywhere. 89tf

Leave for California—The F. L. Stanley family left Friday evening for Dixon, Calif., where they expect to make their future home. They lived at 129 Granite street, while in this city.

Fruit cake and mince meat is here. For citron, orange and lemon peel, raisins, currants, figs, spices, sugar, etc., Detrick's Groceries sells for less. 48tf

Our candy prices are right, quality considered. Rose Bros. 74tf

Returns to Trail—Mr. and Mrs. Ralph Dunlay, and baby have returned to their home at Trail, after a short visit in the city.

If you want the best there is in bacon, boiled hams, clipped beef, lard and shortening, get it at Detrick's. We sell for less. 48tf

New shipment of suits and o'coats just in. Will be glad to show them. Paulserud's. 84tf

Students Expected Tonight—Sunday will see many familiar faces in the city again, for students now attending the Oregon Agricultural college at Corvallis will, for the most part, arrive on the mid-night train tonight, or on an early train tomorrow morning. The college will re-open its doors on January 2.

Always see me first about your insurance; there's a difference; why? Ask me. Yeo, of course. 84tf

Eat better tamales at Rose Bros. 74tf

Tree Brings Elks \$1700—The Elks' Christmas tree at Medford netted the organization \$1700 in cash to add to the fund which the lodge will use to dispense Christmas cheer among the needy poor. Members from all over the county were present at the affair.

We will meet any and all bona fide subscription offers. ELHART'S—Reliable Agents. 85-eod-3

See our bargain windows for Xmas gifts. Studio Ashland. 84tf

De Molay Elects Officers—Grant Selby and Stan Sherwood, of Ashland, were elected junior counselor and treasurer respectively at a recent meeting of the Order of De Molay. A dance for members of the organization and their friends is planned for December 28, at which time the new officers will be installed.

If you want those hens to lay more eggs, get some cracklins, 3 cents per pound. Plaza Market. 85tf

Splendid music. Fine floor, Congenial crowd. Fair Ground Pavilion Dance, Saturday. Let's go! \$3-fr-s

Spends Vacation in Fresno—Al Beck, an employe of the city light department, expects to leave this evening for Fresno, Calif., where he will spend the holiday season visiting with a sister. Beck is driving down in his machine, and will return to Ashland before the first of the year.

Better insurance at reasonable rates. Billings Agency. Phone 211.

Our box candy assortment is the most complete in Ashland. Rose Bros. 74tf

Discharged from Hospital—Roy Coffmann, of Phoenix, who was injured during the county fair auto races, and who has been in the community hospital at Medford for the past three months, has been permitted to leave the institution and to return to his home. He is now able to get about a little with the aid of crutches, but may have to have another operation upon his broken leg before it is healed entirely.

The crowd will be at Jackson's dance Saturday night. Will you be there? 87-3

CRYSTAL JARRING CAN BE PREVENTED

Simple Shock Absorber That Was Devised by Operator on a Transoceanic Vessel.

One of the worst irritations suffered by the crystal detector operator is the frequent jarring out of good adjustment. Often the slightest vibration caused by a heavy footfall, slamming of a door or someone brushing against the table is sufficient to disturb the good point. The process of the readjustment has to be gone through again. This happens with such regularity that numerous schemes to avoid jarring the detector stand have been devised. Most of these were failures, and the phrase "Don't Jar Out Detector," became a standard joke. There is one scheme which will protect the adjustment from almost anything short of an earthquake.

This idea was first encountered on a shipping board vessel. The vibration on a ship is great, and for this reason galena cannot ordinarily be kept in adjustment, and is rarely used. However, on a vessel in transoceanic service the crystal, unless the very best possible, will not bring in a signal for days at a time when the ship is near mid-ocean, far from any land stations. This operator had rigged up a shock absorber for his galena detector as shown in the figure. Little explanation is necessary. A block of wood a foot square or smaller supports four large nails or wood posts between which are stretched rubber bands as shown. These bands support the detector stand. If the stand is heavy with a small base it will be top heavy; and the stand had better be mounted on a larger base. The rubbers should be only heavy enough to keep the stand from touching the block, so that there is plenty of flexibility to absorb all vibration.

Use a flexible cord for connecting the detector into the circuit so that it can be taken off the shock absorber and adjusted on the table. When a good adjustment is obtained, carefully replace the detector on the shock absorber and it will stay in adjustment almost indefinitely unless of course disturbed by the heavy signals or static.

In the case mentioned the detector would hold an adjustment through an entire watch, though the vibration from the engine was pronounced and in a heavy sea there were strong tremors and jumps. This ship rolled considerably, but although the detector

without the counteraction of the opposite half of the wave. The more perfect the rectification the louder the signal will be in the phones, because the resultant audible current is the difference between the two halves of the cycle. The crystal is not a perfect rectifier. It is merely a resistance which does not follow Ohm's law. It offers more resistance to a current flowing in one direction than the other. Suppose the positive half of the current is to be utilized, partially neutralize the positive current, reducing the strength of the signal.

A curve for a galena crystal is shown as curve No. 1, in Fig. 1. The curve will vary for every adjustment on the crystal. This graph represents a very good adjustment. The best signal will be obtained when the sharp bend in the curve is at the working point. In the case of the galena crystal this point would be at zero potential. At this point the rectification will be the highest.

Some crystals require a local battery and potentiometer to bring the working point to the proper point on the curve. Curve No. 2 is for a carbon-borandum crystal. To work this crystal most effectively the potentiometer would have to be adjusted to give a positive potential of about three volts. The dotted line for No. 3 is for an ordinary and is a straight line.

Longer Life for Your Tubes. For storage battery economy and longer life of the vacuum tube, it is always best to employ the minimum filament brilliancy consistent with adequate audibility of the signals being received. Nothing is gained by burning the filament above the temperature necessary for maximum regeneration, and white heat is seldom necessary to accomplish this, according to Radio Broadcast. By resorting to a two-stage amplifier in receiving from distant broadcasting stations, ample audibility can be obtained without excessive filament brilliancy. As a matter of fact, signal strength may well be sacrificed to purity of tone in voice and music, for after all it is faithful reproduction of sound rather than maximum noise which makes radio-telephone reception enjoyable.

Radio School for Army Flyers. A new army radio school for training air service radio operators and electricians has been established at Chanute Field, Illinois. The school was removed from Post Field, Oklahoma, and new classes for radio instruction are being formed. It will be equipped with all the latest radio devices, including apparatus for aerial work in both heavier and lighter-than-air craft. Enlistments for training in radio for the army air service are now being accepted at Chanute Field.

Vatican Uses Radio to U. S. The first use of radio by the Vatican was the recent transmission to the United States of a message from Pope Pius XI, through Mgr. F. Morgognini Dacia, papal pro-segretary of extraordinary ecclesiastical affairs, to James A. Flaherty of Philadelphia, supreme knight of the Knights of Columbus. The radio carried the formal approbation of Pope Pius of the Knights of Columbus, million-dollar American welfare campaign in Italy.

Big Chinese Program. The new radio program in China calls for the construction of four wireless stations. One in Shanghai is to be larger than any now in existence in this country. Completion of this station will mean direct communication between the United States and China.

RADIO FLASHES A good safety-first slogan for the radio fan might be "Live wire? Dead man!"

A couple married by radio a short time ago already are seeking a divorce, a report says. Sort of a loose coupling.

It is said that information broadcast from South America to manufacturers of motorcars in the United States resulted in large foreign orders.

A Western minister broadcast a talk upon the value of the right atmosphere in home life. The home life, like radio, often has static in its atmosphere.

Members of the regular army, organized reserves and National Guard in San Francisco will have the opportunity to buy some of the 10,000 army receiving sets at \$7.50 each. These sets were declared surplus stock and cost \$1,000,000. Buyers are limited to military men only.

A small piece of hollow brass tubing, such as often used for curtain rods, will make a good shaft for the rotor in a variocoupler. The two connections for the revolving coil are made by wires running through the hollow tube to the center, then through a hole to the windings. This connection will do away with sliding contacts in the variocoupler.

It often is difficult to make dials or knobs hold firmly in place, on such instruments as variometers, rheostats, etc., because the shafts are too smooth. This may be overcome easily by filing one side of the shaft slightly, making a flat surface. Place the tightening screw over this flat space. Adjust it firmly, and the dials will be held in place.

If it is for Ashland, we are for it. Read the want ads.

LITTLE TALKS ON THRIFT

By S. W. STRAUS, President American Society for Thrift.

THRIFT of effort is person efficiency, which depends largely on one's willingness to concentrate on one thing at a time.

Carelessness in the performance of a duty no matter how trivial it may seem constitutes one of the worst drawbacks to personal success. An old adage tells us with deep truth that anything worth doing, is worth doing well. There is no place in our progressive American life today for the slipshod, careless person. Those who merely shuffle along, dodging essential details, are out of place in our current life.

Opportunities to broaden and advance come only to those who prove their ability, step by step, and are willing to take infinite pains with each thing they do. Nature does not endow us with the genius of doing big things quickly and well. Progress must be acquired by diligent application and concentration, first upon the seemingly unimportant tasks and then on those of constantly increasing consequence.

Learn how to do well one thing at a time. This involves not only the feat of accomplishing the definite undertaking, but it is a lesson in accuracy as well.

The mistake often is made of trying to do too much or of endeavoring to advance too rapidly. As a result no forward steps are taken, time and energy are used up trying to correct mistakes made under pressure of undue haste, and a general condition of inefficiency results.

Study concentration. It is a shrift of energy which is just as necessary to our welfare as thrift of money.

It pays to read the classified page.

REALLY NOT MUCH TO IT

How High School Boy Made Discovery That All He Needed Was Just Confidence.

Arthur is a manly young chap who has just graduated from high school. He had secured a position in an office where several times he had been invited to go to lunch with his employer. He always declined the invitation.

From various bits of information the lad had let fall, mother believed the man was interested in her son and thought the boy ought to accept the invitation. "Why don't you go with him?" she asked Arthur one day at the dinner table.

"I'm afraid," he answered. "I might not know what to do. You know—I might do the wrong thing."

Now, mother had been very particular in the training she had given the boy and was proud of the result. She had perfect confidence in him. So with a serious face mother simply remarked: "Why, all you have to do is to keep your hat on, put your feet on the table, put your knife in your mouth, make as much noise as possible when you eat and—"

"Mother!" shouted Arthur, a look of amazement on his face. Then the humor of it struck him and there was much merry laughter.

Next morning Arthur informed mother that he had gone to lunch with the boss. "Everything was fine, and we had a good talk, too," he added.

"Were you embarrassed?" asked mother. "Of course not!" he answered in surprise. "Why should I be?" And mother, satisfied, smiled knowingly.—Chicago Journal.
