What Did I Get Out of It?

Have you ever asked yourself that question after spending more money than you knew you could afford? It's not a selfish reflection; it's really your conscience entering a protest against waste. You don't feel that way when you put your money into an interest-bearing account.

Don't let friction "warm up" your engine

A poor cold test oil will not lubricate your motor in cold weather. It congeals in the oil reservoir and is not responsive to the action of the pump. Therefore, while your engine is warming up, it is running practically without any lubrication. The result: worn bearings, scored cylinder walls, and drain on batteries.

Zerolene for Winter Lubrication

Zerolene No. 1, No. 3 and No. 5 flow freely at zero, so that the engine bearings get oil even when the motor is cold. The correct body of Zerolene will make starting much easier on your battery, eliminate the danger of burnt out bearings and noticeably increase the power and responsiveness of your engine. Consult the recommendations for winter lubrication as shown in the Zerolene Correct Lubrication Chart.
