Daily Fashion Hint

VERY CHIC AND SIMPLE

The designer of this frock in rose-color French eponge makes clever use of a picot, trimming of white pique. The vest is of rose organdy, hemstitched at the top, the picot edging outlining the open front, collar, and turn-back cuffs. There are any number of suitable fabric for a style like this. The selection of a suitable one depends, of course, upon the use for which it is intended. In one of the crapes or Egyptian prints it develops into a smart afternoon model. Medium size requires 3 1/2 yards 36-inch material. Pictorial Review Dress No. 1572. Size, 34 to 50 inches bust. Price 35 cents.

A meeting of the Hawthorne School Parent-Teacher Association will be held at Hawthorne school Tuesday afternoon at 3 o'clock. All patrons of the school are urged to attend. 19-1

RUBBER SUPPLY OF WORLD DECREASING

Los Angeles, Sept. 22.—What are the real facts behind the statement frequently made that Great Britain through the Stevenson act, is levying a tremendous tax on the automobile owners of this country?

H. E. Blythe, General Superintendent of the Goodyear Tire and Rubber Company of California tells the story.
As recently as 12 years ago 90 per cent of the rubber used in the world was wild rubber, the bulk of it coming from Brazil. About 10 per cent was plantation or cultivated rubber grown in British and Dutch possessions in the Far East.

Within five years that situation had exactly reversed itself. Today 95 per cent of the rubber used in the world is plantation rubber and five per cent is wild rubber.
The principle reason for this striking change was that wild rubber could not be obtained in sufficient quantities to meet the world's demands. The price soared to a dollar and two dollars a pound. The five-year average up to 1913 was \$1.30.

The automobile industry was developing by giant strides, and the demand for rubber quadrupled within a decade. Scarcity brought high prices, as it always does.

It is entirely due to the fortunate circumstances that English and Dutch planters had begun to plant rubber on a large scale around the year 1905-1906 that a very serious danger was averted in the development not merely to the tire business but to the entire automotive industry.
Three dollar rubber entering the market, however, and quickly dominating the market, the price stabilized, then came steadily down during the next few years reaching 55 cents in the spring of 1920, the lowest price that we had ever paid for crude rubber.

REAL ENTERTAINMENT TO BE SHOWN LEGION

INDIANAPOLIS, Sept. 24.—Little routine entertainment is likely to be afforded American Legion delegates and visitors to the fifth annual convention of the organization at San Francisco October 15 to 19. The Golden Gate City, more thoroughly interested in the entertainment of this group of veterans than in any previous convention, will afford many novel attractions, most of them never before offered by any legion convention city.

Aside from the actual business of the legion, the programme outlines many features. These include divisional reunions and gatherings of regimental and other units formed to perpetuate comradeship of the great war. Second in point of numbers to that of legion delegates is the convention of the American Legion Auxiliary, at which the women supporters of the legion will gather. The Forty and Eight Societies, the legion's "play ground," will attract a number of other delegates. None of these delegates are "interlocking" and must of necessity attract additional visitors to the city. Pre-convention estimates place the expected guests at 150,000.

San Francisco will do its utmost to entertain these guests. With the many scenic wonders so close by, side trips will be an attraction to the legionnaire will be unlikely to forego. Cities across the bay, the great military reservations and fortifications, the ocean and the proximity of California's scenic splendor will attract many guests. Chincoteague and Barbary Coast, though not to be seen in the light of the earlier days because of changes in the city, will afford unusual attractions for the visitors.

One project is the great memorial plaza, where the assembly hall in which the organization will be one roof, can be found accommodations for the largest conclaves, at work is located. Here, under Halls, committee rooms and gathering places will care for the legionnaires and auxiliaries in the one building.

The city's 250 hotels, of which nearly half have been placed at the disposal of the housing committee, will afford ample quarters for all visitors. These hostleries will not advance their prices, for, according to a city ordinance, owners are liable to lose operating rights and enjoy a jail sentence if found guilty of profiteering on convention occasions. Automobile tourists will find especial provisions made for them in a huge parking area, on one of the military reservations. Lights, water, community ovens, tenting facilities and every convenience will be provided those who live in this camp during the legion's week.

PEACH BLIGHT THREATENS

Peach blight is likely to play havoc with Oregon orchards this fall unless growers spray their trees at once after picking with Bordeaux mixture 6-6-50, reports H. P. Barris, plant pathologist of the experiment station. Twig and bud infection is sure to develop on unprotected trees with the first rains. Blight is responsible for more damage to Oregon peach orchards than any other disease, and conditions this season favor a more serious attack than usual. Directions for preparation of Bordeaux mixture will be sent by the college on growers' requests.

LEGION BACKING CIVIL SERVICE

WASHINGTON, Sept. 20.—The right of civil service employees who were veterans of the World War to retain their positions has been tested by American Legion officials in District of Columbia courts recently, and may be taken to the U. S. Supreme Court if necessary to protect the veterans' rights. The veterans' organization, according to leaders, is intent in its purpose to see that those former soldiers now employed by the government under civil service, are not discharged by administration officials without just cause and hearings.

The case in point is that of William D. Robinson of Virginia, an employee of the income tax division of the internal revenue bureau. Robinson was notified late in July that his services would no longer be required because of a reduction in personnel and on account of his efficiency rating. He appealed to the courts and was granted a temporary injunction restraining the bureau officials from discharging his until a final plea could be heard. It was said that this was the first instance that the government had ever been directed by the courts to keep an employee on the payroll. Arguments of officials in the hearing are expected to develop reasons for the proposed discharge of Robinson.

If the legion is successful in the fight for the retention of Robinson, it is expected that nearly 300 other ex-service men, formerly employees under civil service will seek reinstatement. Under the law, veterans are given preference in such positions, when possible.

SMALLEST MACHINE GUN DEMONSTRATED IN ROME

ROME, Sept. 20.—A machine gun weighing only eight kilograms, said to be the lightest ever built, was demonstrated here recently at a local arms manufactory. It fires 250 shots per minute and is designed to take Italian cartridges. The gun was invented by a Dane named Madsen. The demonstration was witnessed by numerous Italian naval and military officials, and the minister and consul of Denmark. The experiments proved all claims made for the invention.

INTERNATIONAL AIR RACE SET SEPT. 28

LONDON, Sept. 21.—An interesting test of aircraft construction methods will be provided by the race for the Schneider Cup, which is to be "run" at Cowes on September 28. Planes have been entered by the United States, Great Britain, Italy, and France, and the race is expected to afford a demonstration that will indicate which of the four nations has reached a higher stage of aircraft development.

The race is for seaplanes and flying boats, and eleven huge seaplanes have been entered. Three will represent America, three France and two Italy. The United States also has a reserve plane entered.

American aviators already have arrived at Cowes with their machines and are actively engaged in "tuning up" for the forthcoming struggle. All of the United States entries are of the naval seaplane type and will be piloted by American naval officers. The American entries are in reality land planes that have been converted into seacraft by the attachment of floats.

The most powerful of the American machines is the NW-2, with a Wright T-2 engine capable of developing 700 horsepower. This plane is of practically a new type and is expected to prove the "star" of the American fleet. In addition two CR-3 machines, equipped with 465-horsepower Curtiss engines, will compete for the United States Navy. The reserve machine, which will be used only in case of mishap to one of the other three, is a TR-3 seaplane, which is an improvement on the TR-1, which won the Curtiss marine trophy last year, attaining a speed of more than 112 miles per hour over a 160-mile course. The three planes expected to compete in the race, however, are reported to have reached a speed of 200 miles per hour.

England will be represented entirely by privately built and owned planes. The Government is according the race no support beyond a promise to buy the winning plane, if British, minus the engine, for approximately \$15,000. This offer is contingent upon the winning plane being of a new type.

England's chief hope apparently centers in a machine known as the Blackburn Pellet, built and entered by the Blackburn Aeroplane and Motor Company. This plane is constructed on what is known as the "sesquiplane" principle. It has two sets of planes, the lower ones carry the plane when it is on the water, and the upper ones much longer and constructed to give the flying boat its lift. Considerable secrecy has been attached to the building of this plane, but it is understood to represent the "last word" in British aircraft construction. It is equipped with a Napier engine designed to develop 550 horsepower. Its estimated speed is 175 miles per hour.

The other British entries are the Supermarine Sea Lion and the Sopwith-Hawker machine. The first named is the craft which won the Schneider Cup last year, with some changes in design calculated to increase its speed. It is equipped with a 450-horsepower Napier Lion engine. The Sopwith-Hawker plane is fitted with a 400-horsepower Bristol-Jupiter air-cooled radial engine.

Details concerning the French and Italian entries have not been received. The French are now engaged in a series of tests to select the planes that will represent that nation. It is understood, however that one of the French planes will be equipped with a British-Jupiter, which has been built under special license by a French firm.

Comparison of speed records in previous races affords an interesting indication of the progress made in aviation since the cup was first offered. The first race, staged in 1913, was won by France, with a speed of 150 sea miles, in 3 hours 48 minutes 51 seconds. It is confidently expected that a new speed record will be established this year.

CONNECTICUT KIDS MUST HAVE SCOOTERS LICENSES

HARTFORD, Conn., Sept. 20.—So numerous have gas-propelled scooters operated by children become that Connecticut motor vehicle officials are obliged to issue a warning that their operation must be limited to duly licensed motorists and the vehicles must be registered like a grown up's auto. Hereafter the poor little child will need a governess clinging to the end of the scooter if it goes outside private grounds.

FEMINIST LEADERS MEET NEXT MONDAY

Colorado Springs, Col., Sept. 22.—One of the largest gatherings of leaders in the feminist movement ever held in the West will convene here next Monday, September 24, when the National Council of the Woman's Party will meet to discuss further plans in the campaign for an amendment to the Federal constitution providing that "men and women shall have equal rights throughout the United States and every place subject to its jurisdiction."

Party leaders expect to have the constitutional amendment for "equal rights" introduced in Congress next December.

All State chairmen of the Woman's party have been invited to attend the meeting of the national council here, and a letter upon the political situation has been addressed to them by Alice Paul, vice-president of the party, reading in part as follows:

"Before your Senators and Congressmen return to Washington please endeavor to secure their pledges to vote for the proposed amendment. We suggest that you organize deputations to them from their constituents and arrange to visit them until their pledges of support are secured. The fate of the amendment when Congress assembles depends largely upon the effort that is made now to impress the Senators and Representatives with the deep concern of their constituents that the amendment should be acted upon favorably."

The council will perfect plans at the meeting here for securing the pledges of the 531 members of the United States Congress to act favorably upon the amendment.

Mrs. O. H. P. Belmont, of New York, president of the Woman's Party, who came to Colorado Springs to attend the party's ceremonial pageant in the Garden of the Gods, will preside at the council meeting. Mrs. Belmont has been for years a mainstay of the feminist cause in America.

In addition to Miss Paul, who has been in Colorado for some time, and Anita Pollitzer, of Charleston, S. C., national secretary of the Woman's

Party, a number of prominent suffrage and equal rights women workers will participate in the meeting of the national council. Included among these will be Maude Younger and Mrs. William Kent, of California; Sue White, of Tennessee, and Florence Bayard Hilles, of Wilmington, Del.

Decision will be reached at the meeting next Monday in what State the elaborate ceremonial pageant of the Woman's Party will be staged next. Sentiment favors a Southern State for the next presentation of the festival, and it is expected either Shreveport or New Orleans, La., will be the scene of the pageant, probably in October.

BOLD DEER EAT AIKEN GARDEN

Buck Captured But Let Go When Found Too Young To Be Killed

The deer hunters of the Ashland vicinity should be able to go out with only a club and easily bring in the limit if all the animals of the vicinity are as tame as a herd of several which jumped into the Harold Aiken garden on Holly St., early this morning and nearly succeeded in eating up all the vegetables of the garden before they could be chased away.

One young buck was rather badly frightened and tried to break his support around the six foot wire fence but was unsuccessful for so long that the children of the neighborhood gathered and finally were successful in capturing the young animal by hand.

After keeping him in captivity for several hours the party finally decided to give the buck his liberty and the last seen of him he was high-balling over the hill at a rate of speed which would soon bring him up with the rest of his herd.

According to the people of the vicinity the buck was so young that his horns were hardly showing or he would never have regained his liberty as his capturers are rather fond of venison.

Business in Medford—Mr. Aaron Andrews of Fairview Street made a business trip to Medford Saturday Mr. Andrews has a ranch near Medford that he visits often

The Best Test

THE best test of success is not how far you have advanced, but how much reserve you have laid up. The amount you have saved represents your actual advancement. Its size is the best test of your prosperity.

The Citizens Bank of Ashland
Ashland, Oregon

IT IS FUNNY

The way some minds work. Take for instance the mental attitude of the man who, hides a \$30.00 watch under his pillow at night, yet he parks his car on a dark street for hours at a time with a \$30.00 spare tire that has no protection.

The number of tires stolen is said to be appalling. The appalling thing is that so few are stolen when the opportunity is so great. Considerably more than half the cars that pass you daily are carrying spare tires and wheels that have no protection.

Every car owner should have at least two pad locks, one for his garage or tool box and one for his tire carrier. We have a full line of the Celebrated
