JUNE 26

THOU ART MY LAMP, O Lord: and the Lord will lighten my darkness. For by thee I have run through a troop: by my God have I leaped over a wall.—2 Samuel 22:29, 30.

SHOOTING AT THE SAME MARK

For forty-eight hours or more there has been witnessed in Ashland the inspiring spectacle of seventy-two men, from all walks of life and business pursuits, working together as one to bring to a reality a dream long cherished by the leading citizens of the community. For two days they have labored unceasingly. They have thrown personal time to the wind, neglected business and given their best to secure for their town an enterprise that is of decided importance to future progress. For three days they have sat down at a luncheon table, compared their work, reported results and applauded the results obtained by their fellows. In the campaign to finance the proposed new tourist hotel seventy-two individuals have been submerged into one impelling force that is irresistible. As this article is written, the outcome of this splendid cooperative movement is not known. Apparently victory will crown their efforts, yet failure is not uncertain. But irrespective of the outcome, the force that is driving Ashland ahead is stronger today than yesterday. Personalities and keen competition of the business world have been forgotten. Competitors have marshaled and unified their resources for a common cause and have typified team-work to a commendable degree, and they have all but learned the lesson that there is no greater force than that of the combined and harmonious efforts of the aggressive men and women of a community working to a definite end.

If no other result is accomplished the splendid men and women of Ashland have learned the value of shooting at the same mark, and in the future they will undertake projects of greater proportions not only, but they will win success. With so many aiming at the same purpose and striving for common good, results are bound to follow.

BLIND SINCE BIRTH

George Weinman, twenty-four years of age and blind since birth was the honor man at the annual commencement ceremonies of the great Northwestern University this month. He also passed the Illinois bar examination with high honors, and had won two scholarships while attending school. He is the oldest of six children whose father is a man of very modest means. Answering the ovations and thunderous acclamations given him by the four thousand persons present when he was led forward to receive his diploma, he said: "My mother is my eyes. She read my courses night after night for four years—and before than she read my high school lessons, and before that the grade school books."

We can vision that devoted mother, with six small children about her and burdened with household labors, yet finding time to read the lessons and be the eyes of her little blind boy. If one needs an example of devotion and sacrifice it may be found here. The inspiration of a mother's love shines through every step of our lives and few of us properly realize or reward the sacrifice which this devotion inspires.

BRINGING HOME THE BACON

Californians never overlook a bet. New York sat up and took notice when the California delegation arrived for the big convention. The parade down the streets was, of course, headed by a band and flooded out all the pyrotechnics. To cap the climax three pretty girls brought up the rear, throwing California oranges to the massed crowds of people along the way. It was million-dollar publicity brought to the highest point of perfection.

And why not? California has built a million-people city at Los Angeles by her marvelous publicity. With their so-called "sun-kissed" oranges and "sun-cured" prunes and other "sun"-processed products blazoned to the world in costly advertising, the Californians have about convinced mankind that the only genuine sun is the California sun and that all others are cheap imitations.

There is as much sunshine and there are better grapes at The Dalles or Grants Pass or Medford or Ashland than in California, but nobody in Oregon has broadcasted it to the country. Oregon pears and cherries and apples and prunes and walnuts and filberts, and flax for fibre, and long wool, and many other products, beat California and beat the world, but the world has never been told about it.

As for scenery and a paradise of beauty, no spot in the world beats the Willamette or the Rogue River valley in June, or Coos and Curry counties at any time, or the Columbia Highway forever. If they were in California, pictures of them would appear in every magazine in America and on every billboard and street car. But a lot of Oregon people do not even realize that these scenes of beauty are in Oregon.

The California spirit is admirable. It is a state without knockers. Every Californian is a booster.

And they bring home the bacon.—Oregon Daily Journal.

Talk about love at first sight, some of them fall in love without looking at all.

There are a lot of fellows who like to play the game, especially if it is played their way.

The paper which carries the best news and has the widest circulation is the dollar bill.

Then again, quite frequently, when a man gets in the public eye he merely sets up a slight irritation.

A real optimist is the man who gives his fellowmen credit for being a little better than he knows himself to be.

No decision of the public is required to tell you whether or not you are doing your duty to your community. Your conscience is a judge without a peer.

CONGRESS TO BE BUSY DURING SHORT SESSION

WASHINGTON, June 26:—There will be plenty for Congress to do in the short session starting in December.

So much was left undone when Congress quit on June 7 for the summer that a veritable stack of legislation, much of it of a controversial nature, will confront the legislators when they get back on the job.

The first important division of the new session will come on the the Muscle Shoals question agreement having been reached to vote on this on December 3. Two plans are pending, one by Senator Norris (R.) of Nebraska, for Government operation of the great nitrate and powder project in Alabama, the other, backed by Southern Senators, to turn the whole works over to Henry Ford. As Norris heads the Agricultural Committee of the Senate and as his proposal is the majority report of that committee, the test will come on a vote to substitute the Ford bid, carried in a minority report. The Ford offer already has received the approval of the House, acting upon the suggestion of President Coolidge, so with the Senate rests the final decision.

Scores of other important measures will crowd to the front as soon as the session gets underway. Among these will be the Deficiency Appropriation bill, which failed of passage in the first session, leaving the executive branch of the Government with no money to make initial payments on the soldiers' bonus, or to meet other pressing financial needs. The efforts of Western Senators to include a number of reclamation projects in this bill was the principal thing that caused its defeat before; but, with a whole session ahead, these reclamation projects can be taken care of separately and the bonus money granted.

The World Court problem was only nipped in the first session, and there will be a real fight over it this winter. Two plans are before the Senate—one by Senator Pepper (R.), of Pennsylvania, which provides for American entrance into a Permanent Court of International Justice divorced from the League of Nations, and the other by Senator Swanson (D.), of Virginia, for American adherence to the League Court, with the Harding-Hughes reservations. It is the Swanson plan that has the approval of President Coolidge, and he will make a determined effort to get Congress to act upon it.

Among other international problems confronting the Senate is that involved in the ratification of the new commercial treaty between Germany and the United States. This treaty was negotiated by Secretary of State Hughes as a standard for other commercial treaties of a type competent to deal with the usual trade conditions prevailing in the world since the war.

Farm relief legislation and abolition of the United States Railroad Labor Board will again be

urged by the insurgent bloc in both the Senate and the House. The House appeared to be ready to pass the Howell-Barkley bill to end the Railroad Labor Board, but the jam in the closing hours led Representative Barkley (D.) of Kentucky, the author, to withdraw it.

The Navy Department also will come forward with demands for the enactment of legislation to bring the American naval establishment up to the 5-5-3 ratio authorized by the Washington Armament Conference. A bill appropriating money to build new cruisers and other craft passed the House in the last session, but didn't get through the Senate.

Many of these problems, domestic and international, will be discussed by President Coolidge in a message to Congress shortly after the session opens.

At this early date it is impossible to forecast the contents of that message, because much depends upon whether or not the voters decide to permit Calvin Coolidge to remain in the White House after March 4 next.

But one thing is certain—the Presidential message will carry a strong and straightforward plea for economy in governmental expenditures, regardless of the outcome of the election.

SCIENTIST BELIEVES HE HAS CLEW TO LIFE AFTER DEATH

LONDON, June 26:—Asserting his belief that there is life after death, Sir Oliver Lodge, famous British physicist and scientist, has evolved, after a lifetime of investigation, the following theory: "It is evident that there exists a formidable principle, which is able to deal with atoms of matter (giving them life)."

"My working hypothesis is that they (the formative principles) are more closely associated with ether than with matter, that they act primarily and directly on the ether and only indirectly on matter, and that they are able to continue their other habitations when the material particles are worn out and discarded. "We are gradually learning that the greater part of the energy of the universe, and certainly all potential energy, belongs to the ether and not to matter at all. Atomic matter is one thing; the ether is another. They are related. The link between them is electricity. The ether is the fundamental thing."

Thus Sir Oliver has reached a line of thought, as regards the source of life, somewhat similar to that announced by Thomas Edison.

Continuing the British Scientist said: "Consequences Tremendous" "In this general way, there

CITY ORDINANCE HELPS ENFORCE STATE FIRE LAW

That the Ashland City Council, in banning firecrackers merely passed a local ordinance backing up an Oregon law is shown by an excerpt from the law which is printed below.

The Council has received much criticism as the result of the ordinance, which was passed to prevent the possibility of a big fire disaster, and to back up the Oregon law.

Section 1—The discharging, firing or use of firecrackers, rockets, torpedoes, Roman candles, or other fireworks or substances designed and intended for pyrotechnic display, and of pistols, canes, cannons or other appliances using blank cartridges or caps containing chlorate of potash or other explosive mixtures, is hereby prohibited. Provided, that the mayor or council of any city may order the public display of fireworks by properly qualified individuals. Provided also, that such a display or displays shall be of such a character and so located discharged or fired as, in the opinion of the chief of the fire department of such city, shall not be hazardous to surrounding property or endanger any person or persons.

Section 2—The sale of fireworks at retail is prohibited. The state fire marshal or his assistant, I would seek to account for objective metaphysical phenomena. Childishly simple as it appears, it may turn out not only to be true but to involve consequences of tremendous moment to mankind.

"The evidence for survival of life after death ought to stand on its merits, without being hampered by effete superstitions. I wish to deny and repudiate some of these superstitions in a forcible manner. "My first denial is of anything like resuscitation of a corpse. When we say that the facts uphold the doctrine of survival we do not mean that. "As to what becomes of the personality, that is a matter for investigation, a straightforward, scientific inquiry.

"To avoid misunderstandings I should like to say that I am referring to ordinary people and ordinary bodies. If there is a case for an exceptional body and for a different treatment in one particular instance so that one tomb was really empty, that is not a matter to which I wish to refer now."

Exide Gives Service

There is nothing in Exide that boasts; merely silent, dependable, more powerful service for every car and its owner.

We maintain a battery repair shop of equal quality.

Murphy Elec. Co.

Main - Plaza Ashland

ants may, at their discretion, remove or have removed, at the owner's expense, all stocks of fireworks or other combustibles exposed for sale, or held in stock in violation of these rules and regulations.

Section 3—These rules and regulations shall take effect and be in force from and after January 1, 1922.

Section 4—Any person, persons, firm or corporation, failing, refusing or neglecting to comply with the rule and regulations herein provided shall be penalized under Section 8, Chapter 169, General Laws of Oregon, 1921.

Section 5—Nothing contained in these rules and regulations shall affect any existing ordinance rule or regulation of any city, town, or municipality not less restrictive than these rules and regulations governing, the storage, sale or use of fireworks and other pyrotechnic displays, or affect, modify or limit power of cities, towns or municipalities in the state of Oregon, to make ordinances, rules and regulations not less restrictive than these rules or regulations governing the storage, sale, or use of fireworks and other pyrotechnic displays.

WEISER NAT'L BANK CLOSES ITS DOORS

WEISER, Idaho, June 26:—The Weiser National Bank closed its doors Saturday.

On its April 1st statement, the individual deposits of the bank, subject to check, were approximately \$340,000. The capital stock was \$75,000.

Put a Whirlwind on Your Carpet

And see the dust and dirt that comes out, without the nap. There is no brush to pull nap out.

WHIRLWIND is a vacuum sweeper with a pulling power sufficient to pull ivory soap percentage of dirt out of a rug.

Why pay tribute to a superstition?

ZEROLENE-LUBRICATED CARS WIN SIX OUT OF SEVEN YOSEMITE ECONOMY RUN TROPHIES

Does Zerolene "stand up"? The drivers of the four cars that won six of the seven trophies in the 1924 Los Angeles-Camp Curry (Yosemite) Economy Run say so.

Of the five Zerolene-lubricated cars entered in the race, four carried off prizes, including the sweepstakes won by the Overland, model 92. Six of the seven trophies offered went to cars using Zerolene. And incidentally, the oil consumption recorded by the official checks was remarkably small.

The sweepstakes winner writes:

"In spite of the intense heat to which the motor was subjected, when the ultimate check was made I found greatly to my surprise that the gauge showed absolutely no use of oil whatsoever. I attribute my success in winning the 1924 Yosemite Economy Sweepstakes greatly to the use of Zerolene in the motor and Red Crown gasoline in the tank."—Joe Bozzani.

Isn't it time to dismiss forever the superstition that there is something mysteriously "better" about eastern oils, merely because they cost more and are made in the East? Experienced drivers, out to make economy records, don't share that superstition—why should you?

Insist on Zerolene—a better oil—even if it does cost less.

Why Fuller Paints Are Better

They contain white lead, zinc and linseed oil, which when applied makes a perfect waterproof coating that preserves.

Some paints contain silica, to give it weight as though entirely of white lead. Silica is cheap, but it flakes out and does not absorb linseed oil. Some paints contain neutral oil, banana oil and other imitations, but none of them oxidizes to form a protecting coat and to hold pigments.

No wonder about Fuller Paints. They are made of good, the best, materials, the real substances to make better paints. Hence, cheapest in the long run.

J. O. RIGG
