CHAPTER SIX

something about the various tribes involved, and the sec- poles rigged for it. They had several methods for taking tically

The principal tribes with which we will have to deal lumbia and other large streams. Bancroft says: "When were known as the Rogue Rivers, Klamaths and Modocs, Shastas and Umpquas. 'Among th efirst four are found strong race affinities, and they speak dialects of the same language. Their localities adjoined, their intercommunication was frequent, and in time of war they often fought kets into which hot stones are dropped to make the water side by side. For settled description Mr. Bancroft's work on Native Races of the Pacific Coast is recommended. The four tribes mentioned lived and roamed over the con-

knows how to turn it on nor when to turn it off.

(Continued from November 11)

The amount of the wealth which is every year mistakenly invested by the people of this country in speculative, or worse than speculative, securities, reaches an alarming total. It is currently estimated that at least half a billion dollars per annum is lost by the people of the United States through the promotion of worthless securities by unscrupulcus men. If we include the vast amounts which are lost by people who are not necessarily cheated but whose judgment is unsound or who are misled through ignorance, the annual loss will aggregate at least a billion dollars.

The investor class in the United States has grown by leaps and bounds since the World War. It is known approximately twenty million people invested in the war bonds and a very large percentage of these were people who, prior to that time, had never invested money in anything and had never seen a bond or a stock.

In human society it is impossible to expect development or progress without the venturesome or speculative rature of human beings asserting itself. The typical American is venturesome and always ready to take chances, that is why America has been a fruitful field for the promoter of visionary schemes, for the seller of unsound propositions and for the unscrupulous peddler of more or less worthless securities.

Before dealing directly with the incidents it will be our business presently to record, it will be well to learn tions of country occupied by them. It will be observed that we can pay little attention to the line separating California and Oregon, for this line had no significance to the Indians, and that on both sides certain relations were recognized between these neighboring tribes. In fact no regular line had been established except that parallel

of northern California, inherited from Mexico.

GETTING THE GOOD OUT OF MUSIC

Of two evils choose neither has been the answer pusic lovers throughout the world to the contest between popular music and classical composition.

They like music because they like it. Also they find t at they like music that has certain preconceived metho'ls, rather than music that, like Topsy, "just growed." So, they have been getting both.
