THE FUTURE OF FOREST COMMUNITIES

Oregon has one-fifth of the remaining stand of virgin timber of the United States, or 395,776,229,000 board feet. She stands second in volume of annual cut.

Will it be stagnation - deserted logging camps, wrecked sawmills, bare and blackened hillsides? That is for Oregon's citizens to answer - her timber owners, her loggers, her lumbermen, her bankers, and all her citizens.

Outside of the Willamette Valley and valley lands in the southern part of the state, Hood River Valley, and what may be developed by reclamation in the eastern part of the state, Oregon's soil, topography and climate are best suited to growing timber; and timber is going to be a paying crop in Oregon.

What is the answer? To grow a second, a third, and other crops, to follow the harvesting of her virgin stands. When should this new or second crop be started? How can it be started?

It should be started now - Today. It can be started by protection of logged-off lands. Nature has been generous in the Douglas fir belt, and hardly less so in the yellow pine areas. If we humans will keep our fire, Providence, Nature, or the Lord Almighty, will not only start but keep the young forests growing.

That's why all protection agencies harp so much on fire! And that's why an American Forest Week is needed. This year it is from April 18 to 24.

INCREASED USE REQUIRES GREATER SERVICE.

Many people do not understand why, with increase in numbers of telephones rates should increase, when most other services grow cheaper as their use is extended.

To the prospective subscriber it appears that all that is necessary is to put a telephone instrument in his home or office. What actually necessary is, not only to install the instrument in his home or office, but to provide also the complicated plant which will make it possible for his telephone to be connected with any other telephone in the United States, or for anyone of the others to be connected with him.

Each new telephone means increased investment in plant, which is only in part represented by either the telephone instrument or the line running to the particular central office to which it is connected. Not only does this tend to a more than proportionate increase in the plant, but it also means increased complexity of operation.

The problem of furnishing service increases with number of telephones which can be connected, and it is obvious, when one considers the nature of the business, that the many factors entering into cost of furnishing service would increase more rapidly, if it were not for new economies constantly being effected by the telephone organization.

SENSITIVE TO SUPPLY AND DEMAND

In few industries can the working of the supply and demand law be seen so regularly reflected in prices, as in petroleum products; the buyer of petroleum products at retail can almost determine the price of gasoline by watching current prices of crude petroleum, so quick and intimate is adjustment of price relations between them.

The relationship between crude oil and gasoline prices is as close as that between cream and butter. The price of the refined product is bound to rise in proportion to the increase in cost of the crude supply.

STEWART'S WASHINGTON LETTER BY CHARLES P. STEWART. WASHINGTON - What goes on in Congress is about 90 per cent bluff. It's pulled off for its effect on the voters - or what the politicians believe will be its effect.

STUTTERING. MR. T-T-T-TRUE, THIS IS P-P-PACK-P-P-P-PACKAGE TEE-HEE!

MUTTERING. NOW, THEN - WHAT WERE YOU GOING TO SAY ABOUT THIS PACKAGE?

Confidentially they admit it. Publicly it isn't political good form to let the cat out of the bag. Once in a very, very long time, however, by some accident, the cat escapes, and then we find something out. That's what happened the other day during a Senate discussion of the so-called Italian debt settlement plan.

lement or no settlement.

That Copeland harbored this idea surprised nobody, but his candid expression of it did - so much so that, before they could stop themselves several other senators blurted out the information that they thought the same thing.

Copeland favors giving the easiest possible terms to America's war debtors, partly because he's sorry for the debtors, partly because he considers that, if we get anything at all, we'll have done well.

"One of the fond hopes of present-day American statesmen," he said, "is that the settlements we have made with foreign nations are to be carried out to the letter. Some may believe this. I don't."
