**A Word About Osteopathy.**  
Dr. Still called his new system osteopathy, Osteopaths, then being essentially anatomists locate a lesion caused by a bone or ligament or a contracted muscle compressing a nerve, a blood vessel or some organ and cure the trouble by removing the lesion.

Why there should be any opposition to the free practice of osteopathy is not clear except that some people are always too busy to stop the progress of the world. Harvey, the discoverer of the circulation of the blood, suffered ignominy and contempt at the hands of his medical brethren, and his practice dwindled to very small proportions. Galileo was put in prison for saying the earth moves around the sun. But those who trust themselves in the hands of an osteopathic physician can rest assured that he thoroughly understands the anatomy of the human body, and will soon be able to locate in the particular spot the lesion causing the mischief or disease, and that only such manipulations are exerted which will set the bones in their place or remove any obstacle or constriction and thus allow a free flow of blood and nervous energy. In these days of surgery, when it is sought to bring every possible disease in the domain of the surgeon the people should be glad to see simple manipulations triumph over difficult cases which even the surgeon's knife could not remove.

These remarks are offered in a friendly spirit, and not to antagonize any school of medicine; they are prompted by a love of fair play in the land of the free. After many years of medical studies from all possible standpoint, the writer, as a disinterested party not tied to any particular school, neither riding a favored hobby, is forced to recognize the positive fact that osteopathy is merely applied anatomy and physiology; and those who fight it do so either from ignorance or malice.
