DANGER IN OZONE.

While it Kills Some Germs, It May Be Injurious to Health.

That ozone is a most desirable thing, that it is a purifier of the air, a destroyer of noxious bacteria, a wholesome stimulant to the lungs, is a popular belief that cannot be banished too quickly.

Ozone is a poisonous gas. It is injurious to the throat and lungs, irritates the endings of the sensory nerves, corrodes the epithelial cells and causes indirectly changes in the blood which produce headache, depression and drowsiness.

The very latest word on ozone is in the form of two articles in the Journal of the American Medical Association. One by Dr. W. A. Sawyer, director of the hygienic laboratory of the California state board of health, and his coworkers, Beckwith and Stolfield, denounces the use of ozone machines in theaters, schools, offices and other places where it is desired to purify the air. The other, by Drs. E. O. Jordan and A. J. Carlson of Chicago, describes a long series of experiments with ozone performed by them.

So far as its effect upon bacteria is concerned, ozone is valueless in the opinion of all these experts. It undoubtedly does kill some germs, they agree; but, in the words of Drs. Jordan and Carlson, "human beings are injuriously affected by amounts of ozone far less than are necessary to produce even this slight bactericidal effect. * * * Ozone has no place in room disinfection."

Neither is ozone a deodorizer. It sometimes disguises odors, but more often paralyzes the olfactory nerves so that the nose is incapable of smelling them.

Ozone gives a certain "tang" to the air, a "tang" that may temporarily whip up a fagged brain. But Drs. Jordan and Carlson consider this no more beneficial than "a whiff of smelling salts or a puff of the cigarette."

Dr. Sawyer reports that ozone in concentration sufficient to kill typhoid bacilli in several hours will kill guinea pigs in an even shorter time.

Thus is another theory that has been taught as a fact in school textbooks on chemistry and physics—if it is not taught still—thrown into the scientific rubbish heap.—New York World.

Queer Wedding Effigy.

There is a curious custom still prevalent in the Bellary district of India in connection with the wedding ceremonies among certain Brahman families. Just prior to the close of the feasting a hideous effigy of a male figure, fantastically robed in rags, supposed to represent the bridegroom's father, is carried along the streets in procession under the shade of a sieve adorned with tassels of onions and margosa leaves. Every few yards during the procession the feet of the effigy have to be reverently washed and its forehead decorated with a caste mark by its living spouse, the bridegroom's mother. The bridegroom's other female relations have several mock attentions paid to them by the women of the bride's party.—St. James' Gazette.

Respect For Funerals.

A French friend of mine who has been staying in Glasgow for a short time is amazed, not to say shocked, at the indifference of the crowd during the passing of a funeral. They do things differently in France. Even in the crowded streets of Paris every one lifts his hat or cap at the sight of a funeral. In many cases the onlooker stands bareheaded till the cortege has filed past slowly. My French friend assures me that in some parts of his country one would run the risk of almost being assaulted if the obeisance were neglected.—Glasgow News.

Wonders of the Grand Canyon.

The Grand Canyon of Arizona, 7,000 feet deep and twenty miles across, with one side festooned with a million rainbows, makes the other valleys seem contemptible, while the cathedral, built of layers of marble, standing in the center of the canyon, ten miles around at the base and with its final tower twenty times as big as the dome of Cologne and far more beautiful, reduces St. Peter's to the dimensions of a molehill.—Newell Dwight Hillis.

Assumed Names.

A New York detective says there are probably at least 1,000 men in that city living under names assumed after reaching the age of twenty-one years, many of them respected and trusted citizens. He adds, "Men who have been unfortunate in other cities, who have committed some petty crime and want to hide from the world, come to New York to begin life anew, leaving their old names and reputations behind."

The Sea Serpent Myth.

It is possible, even probable, that the sea serpent myth started in all good faith. In the southern seas grow the gigantic algae, the largest of which measure from 400 to 600 feet in length. These when rolled on the beach form enormous cables several hundred feet long and as thick as a good sized tree trunk. Such cables washed out to sea by storms may very easily have given rise to the farfamed but yet undiscovered sea serpent.—New York American.

Gazelle Hunting.

Gazelles in Nubia are hunted by a powerful breed of hounds in build somewhat heavier than a greyhound. In spite of being far swifter than the hound the gazelle falls a victim from the nervous habit of constantly stopping to look back to see if it is pursued. It also expends its strength by taking great bounds in almost vertical direction thereby not only losing time, but exhausting itself, so that it is overtaken without difficulty.
