The Bunko Game.
 "You can't fool all the people all the time."
 "You don't need to. If you can fool half of the people some of the time you can make a good living."

Proving It.
 An editor said of a certain local politician: "We will not call him an ass. We will print his speech."

Do all the good you can and no harm where you cannot do good.

Catarrh Cannot Be Cured
 with LOCAL APPLICATIONS, as they cannot reach the seat of the disease. Catarrh is a blood or constitutional disease, and in order to cure it you must take internal remedies. Hall's Catarrh Cure is taken internally, and acts directly upon the blood and mucous surfaces. Hall's Catarrh Cure is not a quack medicine. It was prescribed by one of the best physicians in this country for years and is a regular prescription. It is composed of the best tonics known, combined with the best blood purifiers, acting directly on the mucous surfaces. The perfect combination of the two ingredients is what produces such wonderful results in curing catarrh. Send for testimonials, free.
 F. J. CHENEY & CO., Props., Toledo, O.
 Sold by Druggists, price 75c.
 Take Hall's Family Pills for constipation.

USING UP THE HOG

Not Even a Hair of Him Is Wasted by the Big Packers.

GOOD PROFIT IN THE OFFAL.

It Yields as Great a Financial Return as Do the Main Food Products of the Carcass—How the Various Parts of the Animal Are Utilized.

There is a use for everything that is removed from a hog. After years of experimenting packers have reduced their business to such a system that they realize as much profit from the offal as they do from the main carcass.

The meat of a hog is from 70 to 80 per cent of the live weight. The 20 to 30 per cent that is classed as offal makes the money for the packers. Exclusive of condemnations by government inspectors, about 17 per cent of each carcass is lost at various stages of dressing and by evaporation in processing and curing, so that really only about 60 per cent actually goes into cuts to be retailed to the consumer. The various cuts—hams, bacon, loins, spareribs and pork sides—are the main products.

Among the edible byproducts is peepsin, which is derived from the stomach of the hog. The liver is used for food as it is taken from the body, and it is also made into liver sausage. Brains are prepared in many ways. Tongues find their way into the making of canned and pickled meats. Hearts are used in sausage.

Tails, snouts and ears are rich in gelatin or glue, but most of them are sold for boiling with kraut and other vegetables and are much in favor with lovers of hotbed meals. Kidneys enter into the fresh meat trade or when the supply is too large are frozen or canned.

Neutral is a specially prepared lard, largely used abroad, and in this country an important ingredient in the manufacture of oleomargarine. Lard proper is not commonly called a byproduct of the hog; it is one of the primary products. About 15 per cent of the average hog goes into the making of lard. The demand for lard has increased greatly during the past few years. It is now used commonly in cooking in place of butter. Part of the lard is further processed into lard oil and stearine, the former used as a lubricant and for illuminating purposes, the latter entering into the manufacture of lard compounds, chewing gum, soft candles, fancy toilet soaps and other toilet preparations. Small quantities of blood are used in the making of blood puddings, but most of it is dried and ground into blood meal, a popular ration with poultry raisers as well as a feed for calves that are being fed on skim milk. Stomachs are used as sausage containers, the lining first being removed and used as a source of pepsin. The "black" or curly intestines of the hog are carefully cleaned, processed and made into chitterlings, an inexpensive food that is fried like oysters, much in favor with colored people. Seven per cent of the weight of the hog is represented in nonedible byproducts in the raw state, which are afterward manufactured into glue, soap, glycerin, blood meal, tanbark, curled hair and fertilizer. In the finished state these products represent about 4½ per cent of the hog's weight, the balance being lost in evaporation. The rinds from skinned hams and bacon, as well as the back skin of the hog, are saved. Pigskin is used in athletic goods. Hair enters into many lines of manufacture. A large part is used in the making of brushes, and the finer the bristle the higher priced brush is produced. It is also curled and used for upholstery. The waste waters are evaporated to a thick brown wax known as "stuck" because of its adhesive properties. It is used in the manufacture of fertilizer, as it has a high nitrogen content. Bones are used in making phosphates for baking powder and other compounds. They are also ground into poultry feed, and a large tonnage finds its way into the fertilizer trade. Bones are also burned for charcoal for use in the purification of sirups in the manufacture of sugar. Bone ash is used in making crucibles for glassmaking and metal refining. Tanbark is a bone and tissue substance that is taken from the tanks after the different parts are rendered for grease. It is used chiefly in stock and poultry feed.—Joseph M. Carroll in Country Gentleman.

"Sudden pain from over-strain"

Every Housewife or Mother is ever under that Nervous Strain which so often results in Headaches, Dizzy Sensations, Faintness, Depression and other Nervous Disorders.

Dr. Miles' NERVINE
 is Highly Recommended in Such Cases.

IF FIRST BOTTLE FAILS TO BENEFIT, YOUR MONEY WILL BE REFUNDED.

BADLY RUN DOWN.
 "I had become greatly run down and my nerves were in terrible condition. I had frequent headaches and became very weak and was unable to do anything. I bought a bottle of Dr. Miles' Nervine. I soon began to feel better, my nerves were quieted. I recovered my strength, and have since recommended Dr. Miles' Nervine to many of my friends who have used it with satisfactory results."
 MRS. FRANCES WHITLOCK,
 179 Broadway, Schenectady, N. Y.
