Leaves Myrtle Point 7 A.M. Coquille City 9:30 A.M.
Coquille City 1 P.M. Myrtle Pt. 4:00 P.M.
Daily except Sunday.

Woolen Mills Building.

Work on the Woolen Mills is going ahead now as rapidly as it can be driven. The pile-driver has been in operation since the middle of last week, and a space one bent wide has been driven, connecting with Ross's wharf and extending east to the east side of the Woolen Mill lot.

This space will form part of the wharf in front of the building. Today work was begun on the foundation proper and arrangements are completed to expedite the construction as soon as possible.

We received a note this week from M. R. Lee, who is at Rochester, Minn., and we learn that he and an expert from San Francisco are at work there getting the machinery for the new mill ready for shipment, which task will probably be finished in from four to six weeks.

The Company intends making a good job of the foundation and will put in a concrete bed for the boilers and engines to sit upon.

John Giles is in charge of the work now going forward, and is assisted by R. E. L. Bedillion, A. G. Erickson and Ernest Boak—Recorder.

Coal From Coos Bay.

Marshfield, Or., Aug. 30.—J. D. Spreckles, of San Francisco, has announced his intention to put a new first-class Coast steamer in commission to ply between Marshfield and Portland at an early date. While the new steamer will carry passengers and freight of all kinds, the primary cause for putting the vessel in service is to enter the Portland market with the products of Mr. Spreckles' coal mines at Beaver Hill. These mines are now producing 500 tons of marketable coal daily and have a capacity of 1000 tons daily the output being restricted to the demand. Mr. Spreckles recently put the Breakwater, a fine passenger, in service between this place and San Francisco, and in addition to its freight and passenger business it is carrying from 400 to 500 tons of coal to San Francisco every week. It is understood that the new steamer will be put into service as soon as Mr. Spreckles can secure location and construct bunkers in Portland—Oregonian.

He Secured One-Armed Student.

A plucky young telegrapher, in Boston, lost his arm and faced the fact that he must find a new means of livelihood open to one with his disabilities. Finally he chose engineering and began a correspondence course. Although he had but one hand, he offset this lack by several ingenious mechanical devices and made very satisfactory progress in his studies, completing his course in an unusually short time, and securing a position of large responsibility and good pay. Since that time he has been a consistent recruiting officer for the school—and all of the students he has enlisted are men who have suffered the loss of an arm.

Wagon trains of twenty-five wagons each, filled with quartermaster's supplies, are now daily leaving Washington, as in war-times, and are crawling along the roads of Virginia towards Manassas. Engineer, hospital, tent, ambulance, and other trains are on the move, giving the country a busy and picturesque appearance. The swearing is awful, and the small boy is delighted.

Senator Lodge is the literary mentor of the President. He has revised the letter of acceptance, which will be given to the public in a few days. This letter will be as good as a speech, and will inform those who desire to know, what are the latest conclusions which have been reached by Mr. Roosevelt.

Ex-Senator H. G. Davis, of West Virginia, says he belongs to the laboring class, and therefore is not hostile to it. Every man, he adds, is entitled to full compensation for his services after their kind.

A Correspondence School at Sea.

[From Success.]
"Politics," as the old saying has it, "makes strange bedfellows." With equal accuracy it may be said that "correspondence instruction makes strange beds." The first merchant ship sailing from Chicago to England carried among its crew a young correspondence student who secured his position directly as a result of the technical training gained by his studies. With him he took the instruction papers for another fall course, and his bunk on shipboard, was made one of the most novel and picturesque of student "dens." These floating study bunks are on all the seas from Cape Horn to the Arctic Ocean. One young student in the Yukon country writes that he cannot take his books and instruction papers on a certain expedition because of the certainty that they will be stolen, while another sailor student cruising off Honduras humorously complains that he suddenly finds his tuition expensive because the revolution of that energetic country has made twenty-five dollars represent sixty-one dollars, and, not having had a surplus on hand, he "feels the financial rise."

Fatal Accident At Allegany.

Wm. Dayton a logger, while working in Stimmerman camp about Allegany received injuries yesterday that resulted in his death about a half an hour after the accident.

The unfortunate man, in company with two others, was standing on a log near the landing when another log came flying down the chute toward them. They saw their danger and started to run. Dayton, in some manner, missed his footing and fell between the log on which he had been standing and the other and was carried the full length of the stationary log, having his legs and arms broken and being otherwise badly mangled.

A messenger was at once dispatched for medical aid, but the man died before assistance could be rendered him. T. J. Lewis, the undertaker, was at Allegany, when the news of the accident reached that place, he having gone there with the body of David McClay, and having some knowledge of medicine he immediately started for the scene of the accident with the intention of rendering first aid to the injured man, but the messenger of death was before him and the only help he could give was to prepare the body for the funeral.

The remains were brought to town this morning and will be buried under the auspices of the local Aerie of Eagles, of which order the deceased was a member of only one month's standing. The funeral will be held in the M. E. church at 2 p. m. tomorrow, and the remains interred in the I. O. O. F. cemetery. Rev. Chas. T. McPherson will conduct the services.

William Dayton was well known here, having resided on the bay and in Tenmile, where he owned a claim, for the past four or five years. He was a native of Wisconsin and about 45 years of age.—Post.

Sick Headache
"For several years my wife was troubled with what physicians called sick headache of a very severe character. She doctored with several eminent physicians and at a great expense, only to grow worse until she was unable to do any kind of work. About a year ago she began taking Chamberlain's Stomach and Liver Tablets and today weighs more than she ever did before and is real well," says Mr. Geo. E. Wright of New London, New York. For sale by R. S. Knowlton.

During the last fiscal year, ending June 30th, nearly nine millions of dollars worth of public lands were taken by home-seekers. These number 172,857. This is a vast number of farms to add to those already existing and shows that many people have gone west.

I find nothing better for liver derangement and constipation than Chamberlain's Stomach and Liver Tablets. L. F. Andrews, Des Moines, Iowa. For Sale by R. S. Knowlton.

NOTE AND COMMENT.

Judge Parker has authorized the stump during the campaign, with the exception, possibly, of three or four speeches in the great cities.

Postmaster General Payne expects next year to get two-cent postage from America to Europe. And when will he go in for a parcels post, such as they have in England, Germany, and all civilized countries?

Newport, Rhode Island, is talking of a million dollar hotel, also of a ball recently given by Mrs. O. Reichs, at which all the gentlemen had to appear in white satin breeches. The season is now said to be in full swing.

Because the Executive Board of the Philippine Commission at St. Louis called the twenty-five Visayan pupils, who were attending the model school, "little savages" they have struck and refuse to go any more. It seems they do not consider themselves savages in the American sense of that word.

Since the heavy frost in the Adirondack wilderness a few days ago, word comes from New Mexico that there has been a severe snow-storm in the Vegas mountains. It drifted from eight to twelve inches deep, and quite surprised passengers on the burning east who were on their way to the land of oranges and pulque.

After all Senator Fairbanks will skip about the country a good deal during September. He will make a speech in Maine, then rush out to Marion, Kansas, then back to Elmira and Saratoga, N. Y., and so on through New England. Ex-Senator Thurston of Nebraska, will also put on his seven league boots and do New York state.

Out in Australia the working men who have an eight hour day are now agitating for a six hour day. Their theory is that the productiveness of modern industrial society is so great and increases so rapidly that very soon it will not be necessary for any one to work. That has long been both a theory and a practice with the American hobo.

The Geological Survey of Washington contemplates making use of the Washington Monument for some novel wire-stretching experiments, in the attempt to ascertain the pressure of the force of gravity at the center of the earth. A Boston paper speaks of the monument as the highest structure in the world. The Bostonian's idea of the world must be very limited.

The Ute Indians of Alamosa, Colorado, have informed Senator Patterson, that they do not wish to have any further dealings with the United States, as Uncle Sam fails to keep his treaties. They decline to sell to the Government the cliff-dweller's ruins in the Mesa Verde country. The Indians are dogs in the manger. Now let us take them in the name and cause of archaeology.

Many people are wondering why so many eminent speakers of both the Republican and Democratic parties are so vigorously stumping Maine and Vermont when the only possible question in either of these states is as to the size of the Republican plurality. The reason is this: If the Republican plurality should happen to be exceptionally large it will be regarded as indicating a national Republican success. If the plurality is less than normal it may indicate a national victory for the Democrats.

Some of the Canadians are now pointing the finger of scorn at the United States. They claim that there is great activity in railroad building in their country, while the same business is dull in the United States. They add that they have no trust question to deal with, save and except as they purchase oil of the Standard Oil Company. And they jump all over Secretary Hay for calling the United States, "America." "Bless you," they say, "Canada is much the larger half of America!" As if one half could be larger than the other.

Already there has been a frost throughout the Adirondack region which nipped tomatoes, potatoes and apples. A weather bureau with an automatic apparatus for predicting early frost might be established on the top of one of the mountains.

The authorities of Mt. Vernon, New York, have found a way to put a stop to the use of soft coal by the locomotives running on the railroads through that place. They proposed to arrest the engineers, if it had to be done with the aid of the militia. The result is coke is burned while a train is running through that city and the smoke nuisance is abated.

Prof. Wiley, of the Department of Agriculture, has just issued a very interesting bulletin on the "Useful Properties of Clays." It seems the United States imports nearly two hundred thousand tons of clays each year, between one-seventh and one-eighth of the amount produced in America. There is no reason why the rich clay deposits of this country should not be developed to a point where there will be no further need of importing clays.

Many American newspapers are publishing a table giving the expense of carrying on the governments of the different nations of the world, and showing that the cost of the United States government is less than that of any other nation, being about one-third that of Great Britain. This shows what figures can do. The table does not at all take account of the fact that three-quarters of the expense of our government is borne by states, cities, counties and towns, instead of being charged up to a central exchequer as in the case of England, France, Germany, etc.

NOTICE.

I keep in stock Cigars and Tobacco. Also fresh candies, and nuts, fruits, etc. Milk Shakes, Lemonades and Soda. Our prices are right. We will use you right. Come and see us.
Respectfully submitted,
JAMES L. THOMPSON.
