Corroboration!

OF INTEREST TO COTTAGE GROVE READERS

For months Cottage Grove citizens have seen in these columns enthusiastic praise of Doan's Kidney Pills by Cottage Grove residents. Would these prominent people recommend a remedy that had not proven reliable? Would they confirm their statements after years had elapsed if personal experience had not shown the remedy to be worthy of endorsement? The following statement should carry conviction to the mind of every Cottage Grove reader.

Mrs. Ella Bisbey, 439 Grant Ave., Cottage Grove, Ore., says: "All I ever said praising Doan's Kidney Pills in previous statements, still holds good. I have great faith in this remedy and don't hesitate to recommend it. Doan's Kidney Pills gave me relief from kidney trouble. Another of my family was also greatly benefited by them."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Bisbey had. Foster-Milburn Co., Props., Buffalo, N. Y.

The Liver Regulates the Body; A Sluggish Liver Needs Care

Someone has said that people with Chronic Liver Complaint should be shut up away from humanity, for they are pessimists and see through a "glass darkly." Why? Because mental states depend upon physical states. Biliousness, headaches, dizziness and constipation disappear after using Dr. King's New Life Pills. 25c at your druggist.

WHY BLOSSOMED FRUIT FAILS TO SET

Unfavorable Climate, Disease and Poor Pollination Given as Causes.

When fruit trees blossom well but do not set their fruit either the climate, diseases, or pollination is apt to be the principal reason for failure, as explained by Professor C. L. Lewis, horticulturist of the Oregon station. These conditions were present to a greater or less extent last year and are likely to occur at any time, for which reasons growers should be on their guard to lessen the ill effects.

Heavy rains at blossoming time mean of course that bees are not flying and that pollination would not take place. Or a heavy frost may occur at about the time the fruit is in blossom and this often causes lack of setting of fruit.

Such diseases as scab of the pear or apple and brown rot of prune and cherry will sometimes destroy the entire crop. Insect pests also sometimes are destructive.

Lack of pollination may occur, however, with none of these unfavorable conditions present. Many of our trees are self sterile and require the presence of other varieties near them if pollination is to be secured. Lambert, Royal Ann, and Bing cherries are all self sterile and powerless to pollinate each other. Also Gravenstein and Spitzenberg apples and the Comice and Anjou pears are self-sterile.

Professor Lewis believes that the trouble with many of the isolated trees of Portland would be greatly overcome by having other varieties near them for pollination. This condition could be brought about in some instances by grafting other varieties into some of the trees or parts of trees. Those who are interested further in this matter may receive a copy of a letter on pollination now being prepared by the horticultural department of the College by making application. This letter will be ready in the near future and will give a list of sterile and fertile varieties and very comprehensive information on the subject of pollination.
