

Quick Acceleration

That's the medium boiling points in Red Crown—the middle links of the continuous chain—low boiling points for easy starting, medium boiling points for quick and smooth acceleration, high boiling points for power and mileage.

RED CROWN

The Gasoline of Quality

is a product of straight distillation, a real refinery gasoline—not a mixture—having the correct boiling points in a continuous unbroken chain.

Be sure and get Red Crown. At dealers everywhere and Standard Service Stations.

STANDARD OIL COMPANY

TALES OF THE TOWN

Mr. and Mrs. J. W. Buckley and Mrs. Buckley's mother, Mrs. Phillips, spent the Fourth at Tacoma. Mr. and Mrs. Buckley have returned home, but Mrs. Phillips went on to Colorado for a visit.

Everyone visiting The Fair wonders at the many items we have on sale.

Feed is high; get rid of the roosters; make a saving there. Give close attention to your egg gathering. I want good eggs and will pay extra for them. If you don't have time to gather your eggs regularly I don't want them, as every bad egg sent to market hurts the sale of several more. Spray.

Chas. Bruneau went into the Bohemia district yesterday.

Miss Pearl Thompson, of Tyge Valley, Oregon, is here as a nurse at the Cottage Grove hospital.

Reduced prices on trimmed hats for girls. Straw hats, one lot at the your choice. See them at The Fair.

George Bohlman so far forgot himself one day this week as to trade horses with a traveling horse trader. After the trader had departed, George decided he had been bested in the deal, took the constable with him, overtook the trader and got his horse back.

Ten-cent package hump hair pins, 5c at The Fair.

Miss Minnie Sharp underwent an operation for appendicitis Thursday at the Cottage Grove hospital. She is improving rapidly.

Mrs. Albert Ziniker, who was recently operated upon for appendicitis at the Cottage Grove hospital, went home Saturday.

Miss Marjorie Vaughn was in from Saginaw Tuesday forenoon.

Children's dresses at The Fair.

James Dunn, of Carrols, Wash., was here to spend the Fourth and visit a few days at the home of his mother, Mrs. Lydia Dunn.

J. I. Jones and family and son Frank and wife returned Sunday from an auto trip to Myrtle Point.

The Baptist Sunday school held a picnic yesterday at the city park.

Frank Knox and family visited in Eugene last Thursday.

Andy Nelson and son Ray and Will Edwards and son Herman left for Bohemia Monday.

Mrs. Brumbaugh, of Oakland, Calif., is visiting at the A. Rogers home.

KRYPTOK

GLASSES

The ONLY Invisible Bifocal

They make far view as plain as near view. They can do this for you comfortably because they have no lines or seams to obscure the vision.

For anyone who needs double vision glasses, there are none that can take the place of KRYPTOKS (pronounced kryptokks). They give you the pleasant, easy vision that you will appreciate, for there are no lines or seams or shoulders to annoy the eye.

SILAGE UNINJURED BY FROSTING OF CORN IN FIELD.

(By Horace Addis.)

Last fall much of the corn in the Willamette valley and elsewhere in the northwest was struck by a hard frost before it was mature enough for silage. Some dairymen countermanded orders for silage, because they considered the corn badly damaged and the general opinion was that the silage put up would be of much less than the average feeding value. To the surprise of dairymen generally this has proved not to be the case. I have visited a large number of the breeders and dairymen of the valley and find that the universal experience is that the frosted silage is better than expected while in some cases the declaration is made that the silage is as good as or even better than any they have had before. Whenever the corn was fairly well matured when the frost struck it, and especially if water was liberally used when putting it in, the silage is of excellent quality. One prominent Jersey breeder let his corn stand for two weeks after the frost struck it and he found that it matured considerably in that time. His silage is sweet and good and the cows eat it with relish.

Outside the fact that the fodder blades did not cut up quite as well as those of corn with more life in it, and as there is perhaps a very slight waste on that account, as the larger pieces of blades are not eaten quite so readily, there seems to be no damage to the silage and, in some cases, I have found the frosted silage sweeter, eaten more readily and the cows eating larger quantities than other silage in the same neighborhood put up before the frost, but put up rather green and therefore rather sour.

I have found the same experience in the few places I have visited outside the valley, and it would therefore seem that there should be less fear of frosted silage corn; that it is better to let the corn mature more and take the chance of frost than to put it in the silo too green.

SILO LOANS.

A Lane county bank recently ran the following advertisement:

Flour and corn meal prices continue to soar upwards. At present rate many of us will be using bran and other mill feed instead of flour. This means "hossy" will be cut out of her bran and shorts. Also the price of chopped grain will be too high priced to feed to "hossy" and dry hay doesn't produce much milk or butter fat. Let's conserve the grain supply for ourselves and give "hossy" nice, sweet silage. A silo will conserve your grain supply. More silos will mean a saving in grain, which means a net saving to the farmer in money and will increase butter fat production. We are prepared to furnish progressive, responsible farmers money with which to buy a silo. More silos mean increased dairy production. Talk over a loan with us.

Meat stew (inexpensive cuts or left-overs), with turnips or other vegetables including left-overs, and with rice in the stew or flour or corn meal dumplings; or fish chowder made from fresh, canned or dried fish, crackers, skim milk and onion, served with bread and butter, and fresh or stewed fruit.

Cowpeas boiled with pork and combined with boiled rice, served with a green vegetable or vegetable salad, and honey, brown sugar, maple sugar or date sandwiches.

The wise buyer patronizes the merchant who shows he is alive by his ads. in the local newspaper.

Making the Little Farm Pay

By C. C. BOWSFIELD

Farmers who followed the advice given in this department two years ago in establishing flocks of sheep have made money by the experiment. All who have sheep and lambs to sell are reaping liberal profits.

The market has seemed too high in recent months for successful feeding operations, and this is an argument in favor of maintaining a permanent flock, for, while it pays, generally speaking, to ship in and fatten lambs and yearlings, there are times like the present when prices get too high to make it a safe proposition. The clear money is in raising the stock. Sheep are thrifty animals, getting their living to a great extent in fields that would not do for cattle. It has been demonstrated time and again that mutton is produced much more cheaply than beef.

The wool produced by a flock of sheep will pay the whole cost of feeding and housing, leaving the increase for profit. It does not require a large farm to be able to turn off 100 head of sheep and lambs every year. This will give a net profit of \$500 to \$1,000. Two hundred or 300 head can be raised without much extra work. Farmers may succeed with sheep and clean up a tidy sum of money when they are not equipped to handle a dairy properly. For the amateur and those with small tracts of land sheep are one of the best features.

Two classes of men are making money from farm flocks of mutton sheep—

IT PAYS TO MAINTAIN A PERMANENT FLOCK OF SHEEP

one, those who are gifted with natural ability to select breeding animals and look after every detail that will add to the welfare of the flock; the other, those with a determination and who persistently study and labor until they acquire a working knowledge of the sheep business. Farmers on high priced land sometimes have the opinion that they cannot afford to keep sheep, supposing the land too valuable for that purpose. There are many flock owners, on the other hand, proving that farm land is never so high priced but that sheep can be kept and made to yield a handsome profit. If a farm contains a weedy field or rough bit of ground sheep will make it profitable. They are excellent for cleaning up fence corners and all the odd places about a farm.

There are numerous sources of profit in sheep feeding and raising, one of the advantages being that an interesting branch of industry is furnished for the winter months when ordinary work on the farm is light. Sheep raising also furnishes a convenient market for the odds and ends of surplus farm products, making it especially profitable in comparison with cattle feeding, as the sheep use a greater variety of home grown and cheap feeds. Choice of feeds depends to a large extent upon the condition in which the breeding flocks enter winter quarters. If in good flesh and having access to plenty of roughage, such as clover, millet, alfalfa, roots or corn silage, hardly any grain is necessary; but if the sheep are in a thin, weak condition no time should be lost in supplying them with hearty grain rations. Otherwise results at lambing time will be disappointing. To make the best gain sheep in winter quarters should be kept separate from lambs, rams and feeders. Weak, thin ewes should be separately housed or yarded so that they may get their share of the feed. Sheep will do best if not too closely confined or kept too warm. They need a dry yard for exercise, with a constant supply of water. In winter they require a shed that is dry and kept clean. One of the positive phases of profit is found in the valuable fertilizer which sheep supply.

The kinds of sheep best adapted to the needs of men who make meat production a branch of their farming are found among several popular breeds. Wool as well as mutton being a valuable consideration, it should not be entirely left out of attention even in calculating the profits of feeding. The general purpose types of sheep contain such well known breeds as the Shropshire, Hampshire, Oxford, Southdown and Dorset. Under conditions in the central states there is a large demand for sheep that will shear a good weight of fleece and still give a large mutton carcass. Such conditions are met by these medium woolled breeds.
