

MILLINERY OPENING

The Style Shop

Eugene's Largest Exclusive MILLINERY

ANNOUNCES ITS GRAND FALL OPENING OF
READY TO WEAR AND TRIMMED HATS

FRIDAY and SATURDAY SEPTEMBER 14-15

THE MOST WONDERFUL COLLECTION OF HIGH CLASS MILLINERY AND NOVELTIES EVER SHOWN IN EUGENE WILL BE READY FOR YOUR INSPECTION. NOW LOCATED IN OUR HANDSOME NEW QUARTERS IN THE OREGON POWER BUILDING, NEXT TO THE REX THEATER. REFRESHMENTS SERVED EACH AFTERNOON FROM TWO TO FIVE.

Hats Sensibly Priced Always

957 WILLAMETTE ST. PHONE 816 EUGENE

Society

If you know of a society item and do not inform the newspaper, it is your own fault if it is not printed.

The children of Mrs. R. L. Woolley gave her a pleasant surprise party September 4, the occasion being her seventieth birthday anniversary.

Little Irma Miller entertained a number of her friends at a lawn party Friday evening, the occasion being her eleventh birthday anniversary. She received several nice presents. Among those present were Laura Stewart, Bessie Jordan, Sara Stewart, Helen Stewart, Juanita Fields, Johnnie White, George White, Nellie Stewart, Johnnie Cummings, Arthur Stewart and Beth Bailey.

The Social Twelve club was entertained last Thursday afternoon by Mrs. George Kerr and Miss Esther Silby at the latter's home, the afternoon being spent in the usual manner and refreshments served. Guests of the club were Mrs. J. A. Wright and her guest, Miss Lora Fulton, of Chicago; Mrs. A. C. Dixon and daughter, of Eugene; Mrs. Whitely and daughter Esther, of Ashland; Mrs. K. K. Mills, Mrs. James H. Mills and Miss Leah Perkins.

The Constellation club meets at Masonic hall Thursday afternoon of next week.

The Emanon club held a business session last Thursday afternoon at the home of the president, Mrs. Elbert Bede. Light refreshments were served.

Mount View Society.

Mrs. F. J. Helliwell entertained Friday in honor of her mother, Mrs. Armistead, and her niece, Miss Hazel James. The day was spent in sewing carpet rags, a prize being offered to the one sewing the largest amount. Mrs. Kate Sears was awarded the prize. At twelve o'clock the guests were led to the dining room where they found a table loaded

Boys at the Fort Are Being Doped and
Innoculated Against Everything
but Homesickness; Sixth Co.
Always on the Map.

(Continued from first page)

the body to its last resting place. A. J. Armstrong arrived today and I obtained permission from the coast defense commander for him to take pictures inside the fort.

We are pretty proud of our base ball team. They have played three games of the series and won three. Sixth company is on the map extensively and all the time. We do not head in for anybody.

The Y. M. C. A. asked me for permission to put up a volley ball net in the street between Fourth and Sixth companies today and there has been a bunch of men playing there ever since it was erected. It is good exercise and the boys enjoy it.

The new Y. M. C. A. building is progressing rapidly and will be finished in a few weeks.

We are very much interested in our cantonments which will be commenced soon. We will be comfortably housed and the men will not have to go to the regular barracks to get a warm bath then.

Our pay has been postponed for a short time on account of the trouble in the quartermaster's office.

CAPT. LEE ROY WOODS.

FADS AND FANCIES

Put finely powdered salt on a candle that has burned down to a small piece and it will burn steadily several hours longer.

To test the healthfulness of mushrooms, stir them with a silver spoon while cooking. If there is any foreign substance in them the silver will turn.

Refuse and garbage can be wrapped in newspaper before putting it into the garbage can. In this way the inside of the can may be kept clean.

Rinse glassware in hot water after washing; then place in cold water in which a handful of starch has been dissolved. Drain and polish with a dry cloth.

Batter left over from hot cakes can be disposed of in two ways—it may go into gingerbread, or you can stir it into the mush when it is boiling.

When making cottage cheese do not drain the whey from the curd until it has cooled; milk that has been put to drain while yet warm will result in a tough, indigestible mass.

Buying and cooking for two is a difficult problem; yet many housekeepers have this problem to solve when they are least able to solve it on account of inexperience. For this reason there is much waste and much monotony in the bill of fare. Instead of cooking too large quantities of food and heating up the left-overs, just enough may be cooked for each meal. For instance, divide a can of vegetables into two or three portions and cook each a different way, and it is not necessary to serve the same vegetable two successive meals even in a different form. Thus, a can of tomatoes will furnish a dish of escalloped tomatoes, cream of tomato soup, sauce for meat or macaroni, or supply part of the makings of vegetable soup.

With the cost of everything entering into the making of a newspaper increasing, it is absolutely essential that all subscriptions be paid promptly.

POWELL & HEMENWAY

Bret Harte and the West.

The west is still an indelible term, and many things have been called western which more strictly were far western. The efflorescence of California in the brilliant satire of Bret Harte, to name him only who was first of the Californians, was an effect of the east in the new conditions of the Pacific slope. It had no root in the soil, and none of the poets who formed the San Francisco school of Harte's day were of California birth, much less culture. They were only western by sojourn.

Harte himself, who was first of them, had greater originality in his verse than in his prose, but he was born in and grew up in Albany. The literary atmosphere which he breathed in the west was, as it were, piped from the east, and his ambition was, as the generous expectation of his fellow exiles was for him, to suggest in his prose the literary art of Dr. Holmes—William Dean Howells in Harper's Magazine.

Toothbrushes.

The toothbrush, now an indispensable article of toilet, is but little older than the American republic itself. Not even Lord Chesterfield used one, for, writing to his son in 1754, he said: "I hope you take great care of your mouth and teeth and that you clean them every morning with a sponge and tepid water with a few drops of aromatic water dropped into it. I do insist upon your never using those sticks or any hard substance whatever which always rub away the gums and destroy the enamel of the teeth."

In "Henry Esmond" Thackeray made Lord Castlewood spend "a tenth part of his day in the brushing of his teeth and the oiling of his hair," and in doing so the novelist committed a double anachronism. Not only was the toothbrush unknown, but during the first half of the eighteenth century all fine gentlemen wore wigs and had no use for oil on their hair.—New York Sun.

Strange Proof of Heredity.

So far as his work is concerned we remember a rascally poet named Richard Savage for one solitary line—that in which he speaks of the "teeth transmit of a foolish face." It catches the notion of heredity and suggests the sort of wonderful family likeness of which one has just been told to the Royal Society of Medicine.

The first Earl of Shaftesbury, who died in 1453, was born with a physical peculiarity—the little finger and the finger adjoining on each hand had only one joint, the first two bones being united. The same abnormality affected all the toes except the big ones. Today in a direct masculine descendant of the first earl the same extraordinary formation persists. It was transmitted to him by his father and to his father from his grandfather and has come down unchanged through nearly 500 years, passing through fourteen generations.—London Standard.

Defining a Wife.

The pretty schoolteacher had asked her class for the best original definition of "wife," and the boy in the corner promptly responded, "A rib."

She looked at him reproachfully and nodded to the boy with dreamy eyes, who seemed anxious to say something. "Man's guiding star and guardian angel," he said in response to the nod. "A helpmeet," put in a little flaxen haired girl.

"One who soothes man in adversity," suggested a demure little girl.

"One who makes a man hustle," was the next suggestion.

"And keeps him from making a fool of himself," put in another girl.

"Some one for a man to find fault with when things go wrong," said a sorrowful little maiden.

"Stop there," said the schoolteacher. "That's the best definition."—Pittsburgh Chronicle-Telegraph.

Antiquity.

Antiquity! thou wondrous charm, what art thou, that, being nothing, art everything? When thou wert thou wert not antiquity—then thou wert nothing, but hadst a remoter antiquity, as thou calledst it, to look back to with blind veneration, thou thyself being to thyself flat, jejune, modern! What rhyttery lurks in this retroversion, or what half Januses are we that cannot look forward with the same idolatry with which we forever revere! The mighty future is as nothing, being everything; the past is everything, being nothing!—Charles Lamb.

Trying Experience.

"How was the play?"
"Rather dull."
"You didn't have any tense moments during the performance?"
"Oh, yes. A man weighing not less than 250 pounds climbed over me twice to go out and pull himself together for the next act."—Exchange.

Watermelons.

Small scales or blisters on the rind of a watermelon are said to indicate that the seeds within are turning black and the flesh maturing. As the ripening process advances the blisters increase in size and number until they cover the surface of the fruit.

Mother.

Most of all the other beautiful things in life come by twos and threes, by dozens and hundreds—plenty of roses, stars, sunsets, rainbows, brothers and sisters, aunts and cousins, but only one mother in all the wide world.—Kate Douglas Wiggin.

Strong One Way.

Wife—My husband is not well. I'm afraid he'll give out. Wife's Mother—Well, he may give out. He certainly never gives in.

The highest liberty is harmony with the highest laws.—Giles.

ORCHARD AND GARDEN.

Three thousand dollars will be offered in cash premiums at the great exhibit to be made next fall at Springfield, Mass., for choice vegetables of the various classes.

After a rain and before a hard crust forms is the ideal time to harrow an orchard.

If there are any feet caterpillars on your trees give them a quick singeing with a torch.

Mulch the celery. Four inches of horse manure will help to insure a crop.

Bordeaux mixture repels flea beetle on tomato and other plants. It also helps to control diseases.

Thin the parsnips. If left closer together in the row than four or five inches the roots will be smaller than they should be.

ORCHARD MANAGEMENT.

Summer Cultivation Necessary to Produce Fruit Profitably.

Summer cultivation of the orchard is necessary if a profit is to be made. In the opinion of F. S. Merrill, assistant professor of horticulture in the Kansas State Agricultural college.

Three methods may be practiced in the cultivation of an orchard. The first is the sod mulch system. This is practiced on bottom land or land high in fertility. On hard or fertile land are likely to produce a heavy growth of weed which prevents the formation of fruit buds. In order to overcome this a grass crop should be sowed in the orchard. The grass crop is mowed when necessary and allowed to remain on the ground.

The second method often used consists of sowing a grass crop in the orchard and harvesting the hay. This system is injurious to the trees and reduces the size and value of the fruit.

Where the topography and slope of the land will permit clean cultivation is advisable. It kills the weeds and conserves the moisture. Orchards cultivated in this manner will produce larger fruit than under other systems of cultivation.

Clean cultivation will keep down insect pests by destroying their hiding places and food supply. The buffalo tree hopper is less injurious in clean cultivated orchards because it removes their food supply.

KILL CABBAGE WORMS.

Spraying or Dusting With Insecticides Will Save the Crop.

Cabbage worms, the most destructive insect enemies of cabbage, cauliflower and related crops, begin their depredations in early spring and continue till the crop is harvested. Spraying with either paris green or arsenate of lead or dusting with pyrethrum after the heads form is recommended by the Ohio agricultural experiment station to control such pests.

Spraying with a pound of paris green in fifty gallons of water or with four pounds of arsenate of lead paste (half as much powder) in fifty gallons of water, along with two pounds of dissolved soap as a spreader and stickler, will kill the several species of worms on cabbage. This should be used whenever the caterpillars are numerous up to the time heads are half formed.

After heading begins one part of pyrethrum to four parts of fine lime or flour is preferable. This may be dusted over infested plants once a week when the leaves are wet with dew or rain. A fine material like road dust, lime or flour stops the breathing pores of cabbage worms and often is used alone as a means of control against these pests.

Heading is often delayed several weeks, and frequently plants are made nearly worthless by cabbage worms. The adults are commonly white butterflies or sober colored moths, while the caterpillars are about an inch long and green in color.

To Check Celery Blight.

Spraying with bordeaux mixture and destroying diseased parts will check the spread of celery blight. Bordeaux is made with four pounds of copper sulphate, four pounds of quicklime and fifty gallons of water. The use of this spray material is advised by the Ohio agricultural experiment station on young seedlings before transplanting and afterward as needed. For best results the leaves must be well covered with the spray in plant beds. Burning diseased plants and leaves aids in control of celery blight. Debris left on the plot may harbor the disease over winter.

Banish Weeds From Orchard.

Clean culture is generally regarded as the ideal method of caring for an orchard. Weeds rob the trees of moisture and fertility, harbor insects and rodent pests and render it difficult to get around in the orchard to prune, spray and to pick fruit. A weedy orchard is clearly an abandonment, and the arguments against weeds are overwhelming. The clean cultivated orchard presents a pleasing and well kept appearance, in striking contrast with a weed choked orchard, the earmark of a slovenly farmer.

Prevention of Gapes.

Gapes may be prevented by putting the chicks on clean, fresh ground. Soil may be kept fresh by turning it over at regular periods. Spraying the ground with a 2 per cent solution of sulphuric acid or a solution of two ounces of copper dissolved in a pail of water may prove effective.
