Spring clean to save energy

- Submitted by Pacific Power

Your business can benefit from a deep cleaning at least once per year, and spring is the perfect time. Deep cleaning not only enhances the appearance of your building, it can lower your operating costs as well. Here are wattsmart® cleaning tips from Pacific Power to save you energy and money:

Cooling system: Dust and dirt buildup in system components and ductwork can affect energy efficiency and lead to maintenance issues. Before the cooling season begins, have your system cleaned and inspected by a qualified professional.

Windows: Washing windows will improve the appearance of your building, brighten the indoor environment, and the added daylight - combined with dimming controls - can save money by reducing your need for artificial light.

Lighting systems: Dust buildup on lamps and fixtures reduces their effectiveness and lowers light levels. Cleaning lamps, fixtures and lenses brightens your facility and increases lighting efficiency.

Walls and ceilings: Cleaning or painting walls in small rooms will help to brighten the work area and enhance the effectiveness of natural lighting while improving productivity.

Outside: Sealing and weatherstripping doors and windows help increase comfort and the efficiency of your cooling system. For long-term savings, plant leafy trees near south- and east-facing walls. Trees can provide cooling shade in the summer and allow the sun to reach your building in winter.
