

## Beautiful plants abound at Pass Creek Nursery

Pass Creek Nursery is located at 2361 Umpqua Highway 99, 3 miles off I-5 (exit 162) on the way to Drain, Oregon.

Bob Nash bought the nursery in 1971 from Vern Thomas and ran it for 25 years. The business passed through several owners after Bob retired. In 2009 the nursery was sitting vacant and Travis Nash decided to try running the business with his family after 30 years of being a logger. With a lot of advice from his parents and a LOT of hard work, they made it through the first year and decided to try it again, and now they are starting on their eighth season. The nursery has been in the Nash family for three

generations. Grandparents Bob and Emily Nash still come by from time to time to check up on what's happening.

The nursery is open from the first of March to the Fourth of July. Their goal is provide healthy, vigorous plants for the garden and yard at reasonable prices with friendly, honest customer service. They grow most of the plants that we sell at their nursery. Hanging baskets and patio pots are a specialty. They custom design all of our baskets and patio pots.

Pass Creek Nursery has a full line of vegetable plants for the garden. They also carry a nice selection of fertilizers and insect sprays.

Pass Creek Nursery is open Monday through Saturday from 10 a.m. to 6 p.m., They are closed Sundays. For more information call us at 541-836-2699, or come on by and see what they have to offer for your gardening needs.

## N-Hance renews, conserves and preserves

Americans use a staggering 27 percent of the wood commercially harvested worldwide. A significant portion of this wood is harvested in an unsustainable manner, making the impact on forest ecosystems that much greater. To minimize this impact and to be environmentally conscious, we need to reduce the amount of new lumber used, reuse wood that has already been harvested, and buy wood that was harvested in an environmentally conscious manner to minimize the impact on the forest ecosystems. N-Hance provides the eco-friendly solution of renewing your existing wood surfaces. N-Hance is Dust Free

### Why is dust-free air important?

Sanding can have serious potential health risks if attention is not paid to safely controlling the dust particles. Sanding dust is particularly dangerous because very fine particle sizes produced by sanding can become permanently trapped in the lungs and potentially result in a variety of unwanted conditions.

### How does N-Hance reduce my exposure to indoor dust?

Airborne wood dust is a hazard that you do not have to live with. The N-Hance revolutionary process eliminates most sanding, which simply means no dust. With N-Hance there is no need to cover your furniture or electronics and seal off rooms or vacate for days. Our dust-containment system allows you to breathe easier in your home or office.

N-Hance uses high performance, low VOC water-based polyurethane finishes. By reducing the Volatile Organic Compounds (VOCs) in our products we reduce the compounds that enter the atmosphere and have been found to be related to the reduction of Ozone. VOC exposures are often associated with an odor and with adverse health effects. Concentrations of VOCs are consistently higher indoors (up to ten times higher) than outdoors. VOCs are emitted by a wide array of products including: paints and lacquers, paint strippers, cleaning supplies, pesticides, and building materials to name a few.
