LORANE NEWS

• It was a great day in Lorane on Sunday, Aug. 12. A small turnout at the community potluck at the grange, but a large number attended the annual fire department ice cream social. It was wonderful to visit community members and former Lorane residents.

Many enjoyed the dunk tank, the bounce house, fire truck rides and rides in the EPUD bucket lift with music by Kyle and Jim.

A large crowd gathered beside the Lorane Family Store to see the unveiling of the mural painted by long time Lorane residents and artists, Karen Pidgeon and Alix Mosieur. The painting depicts flora and animals in our valley.

Bruce McDonald and Gary Thompson, life-long Lorane residents, helped unveil the mural with the help of Jim Edwards (store owner) and Jim Bailor, also long-time residents.

As you drive through our community, you need to

Latest water samples show clean water in CG system

The City of Cottage Grove's water production staff, along with assistance from city consumers, collected water samples from 40 regulated city homes last week, per Oregon Health Authority requirements.

The water samples collected were sent to an independent laboratory to be analyzed for the potential presence of lead and/or copper.

Twenty-seven of the 40

homes tested did not test positive for any amount of lead in the water and all of the tested homes' results tested below the regulated Maximum Contaminant Level (MCL) of 15 parts per billion.

The MCL is to be enforced at the 90th percent point of all the homes tested. The homes' lead level results at this 90th percent point, in this round of homes tested, equaled four parts per bil-

lion.

Test results for the presence of copper in the water of the homes tested graded equally as well as that for lead. The MCL for Copper is 1.3 parts per million (or milligrams per liter).

The homes' test results for copper at the 90th percent point equaled 0.023 parts per million. The testing for the presence of lead and copper in the city's drinking water at these regulated

city homes will be repeated again in three years per regulatory regulations.

The City of Cottage Grove is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components.

Lead in drinking water is primarily from materials and components associated with service lines and home plumbing.

When water has been sitting for several hours, the potential for lead exposure can be limited by flushing the tap for 30 seconds to two minutes before using water for drinking or cooking.

The City of Cottage Grove maintains a continuous corrosion control program for the drinking water.

The pH of the water is tested daily to ensure our water is not corrosive to plumbing components.
