Figures of Presidential Election of 1896, and Congressional Election Following, with Reference to Next Year's Campaign.

UTAH! COLO KANSAS ARIZ. H. MEX. TEXAS

Map Showing Election Results of 1896, Republican States Shaded.

Republican Vote, 7,104,779; Representing 271 Electoral Votes. Democratic Vote, 6,502,925; Representing 176 Electoral Votes.

The Republican view is quite different. They prophesy McKinley's re-election on the following grounds:

1. McKinley's successful administrational committee met and indorsed the Chicago platform of 1896 and Mr. Bryan, who was present. Mr. Bryan at present has control of the machinery of the party, and there seems little doubt of his renomination. Some of the leading gold Democrats of 1896 are announcing their opposition to the platform and candidate once more, but the exact amount of opposition within the party cannot be determined for some time.

Mr. Bryan's friends lay claim to success on the following grounds:

1. Most gold Democrats will vote for Bryan either because they do not like the treatment they have received from Republicans or because they are opposed to imperialism.

2. Many former Republicans will vote for Bryan because they are opposed to trusts and imperialism and because they think free silver would help the situation.

3. A reaction against an administration always sets in, and in normal times it is virtually impossible to re-elect any Pres-

4. Bryan is better known than in 1896, fear of a punic no longer exists and this country is able to establish free silver on Its own account and maintain it.

tion of civil and military affairs. The prosperity that has come from

the Dingley tariff and the gold standard. 3. Gold Democrats will not support Bryan and the Democratic party cannot be made to unite on any one.

The study of election figures of 1897 and 1898 is interesting at this time. No one will claim that they necessarily foretell the result in 1900, but they do give a pretty correct idea of what the Democrats must overcome in order to win. The two diagrams given herewith show the results of the elections in 1896 and 1898, the Republican States being shaded. It will be noted that McKinley carried a compact body of States covering the northeast section of the country and Oregon and California in addition. These States represented a total of 2.1 electoral votes, Bryan capturing one in California and one in Kentucky. The vote for the two leading candidates was:

being the largest vote ever cast in a presidential election. These totals vary slightly from some other estimates, as some persons count the votes of the highest electors and some the lowest, while of the result in 1806 the difference being

tal plurality was little more than his plu- ifornia. ralities in New York and Pennsylvania combined.

There were few State elections in 1897, and in none of them were the changes important except that New York and Kentucky went Democratic.

In 1898 there were State elections in all but a few of the States and in all the congressional districts. The diagram above shows which States were carried by each party, those by Republicans being shaded. It will be noted that the Democrats gained over 1896 only two States-Kentucky and Minnesota-and the latter only on the governorship, where fusion elected a popular Scandinavian by 20,000 plurality, though the Republicans carried every congressional district by pluralities aggregating over 32,000.

On the other hand, the Republicans gained Washington, Wyoming, Kansas and South Daketa, which have twentyone electoral votes, the same as Kentucky and Minnesota. The total vote in 1898 in the various States foots up as follows: Republican, 5,499,065; Democratic, 5,427,224.

The vote in the electoral college represented by these States are: Republican, 272; Democratic, 175, or within one vote

NATURE'S WAR PAINT.

scores of birds.

memorates.

was himself.

What Mr. Bryan must have to win is forty-nine more electoral votes than his party carried last fall. In all probability he must have fifty-eight votes, for Minnesota can scarcely be imagined as a sure Democratic State. As to where these votes would come from in case of Mr. Bryan's election, those interested in the subject may figure out for themselves with the aid of the above maps and the following table, which gives the electoral vote of each State:

Alabama veces	
Arkansis	8 Nevada
California	0 New Hampables
Colorado	4 New Jersey1
Connections	6 New York
Delaware	3 North Carolina I
Florida	4 North Dakota

knowledge of the delightful legends of

is fear, and that's about right. That doesn't mean that one is to go about in a state of cheerful id ocy, caressing every buzz saw he comes across in the absurd idea that nothing can do him harm. That would be invoking the foolkiller, who does sometimes eatch up with such people. It means the practical application of the idea that there are two things one need not worry about-what he can help and what ha cannot help. If a thing can be helped, it's help and not worry that it needs, and if it cannot be helped, it is high time that the "incident be closed," as the diplomats say.—Chicago Drovers'

means of horseless carriages. Experi-

of mall car to be operated automatically can be fixed upon as the style of greatest utility. But in the cases where cars have been used a general type has been used. Capacity for the storage of bundles of letters is a prerequisite. The express wagons used have great storage capacity. They are electric cars with storage batteries as motors. In the mail cars the same general plan has so far been carried out.

real thing. But the Government has these wagons is that the rear trucks had its attention called to the fact that carry nearly all of the carrying capacity. The gearing will be rigged much like a four-wheeled hose reel of ments so far seem to demonstrate the light steel, with a space back of the forward trucks for the placing of the battery or whatever kind of motor is to be used. The vehicle back of this will hang low as the ordinary mail wagon does, thus providing a receptacle for the collections. The machine can be operated by one man, as is the case at present. He will sit in the box seat in front, where the motor and steering gear will come close to the hand. When the vehicle is stopped for any purpose he can dismount and take on or discharge his collections as readily if not more so than he does now while his nag is browsing on the grass plats near the curb.

> Strength and lightness are the two essentials in the construction. Recent experiments seem to demonstrate that the automobile can be used on country roads with as much success as the bicycle can.

eye was arrested by a case which apparently contained a gray, duck-like bird facing its own ghost. The "no thirty-inch wheels with pneumatic passage" barrier precluded closer inspection, and for five minutes I stood staring at the case, unable to make out what that wraith-like, almost invisible bird-form might be. I had given it up, when the descrip-tive tablet, which had been pushed
