NOTICE FOR PUBLICATION.

United States Land Office, Roseburg, Oregon, June 8, 1900.

Notice is hereby given that in compliance with the provisions of the act of Congress of June 3, 1878, entitled "An act for the sale of timber lands in the States of California, Oregon, Nevada, and Washington Territory," Michael Keibelbeck, of Saginaw, County of Lane, State of Oregon, has this day filed in this office his sworn statement No. 1078 for the purchase of the NE 1-4 of Section No. 14, in Township No. 22 S, Range No. 2 W., and will offer proof to show that the land sought is more valuable for its timber or stone than for agricultural purposes, and to establish his claim to said land before the Register and Receiver of this Office at Roseburg, Oregon, on Saturday the 1st day of September, 1900.

He names as witnesses: J. I. Jones, Phil Phillips, Phil Spong, Jack Lewis, of Cottage Grove, Oregon.

Any and all persons claiming adversely the above-described lands are requested to file their claims in this office on or before said 1st day of September, 1900.

J. T. Bridges, Register.

NOTICE FOR PUBLICATION.

United States Land Office, Roseburg, Ore., June 19, 1900.

Notice is hereby given that in compliance with the provisions of the act of Congress of June 3, 1878, entitled "An act for the sale of timber lands in the States of California, Oregon, Nevada, and Washington Territory," William H. Whitney of Eugene, County of Lane, State of Oregon has this day filed in this office his sworn statement No. 1116, for the purchase of the SE 1-4 of Section No. 8, in Township No. 20 S Range No 1 W, and will offer proof to show that the land sought is more valuable for its timber or stone than for agricultural purposes, and to establish his claim to said land before the Register and Receiver of this office at Roseburg, Oregon, on Saturday the 1st day of September, 1900.

He names as witnesses: D. C. Matthews, J. M. Griffith, Oregon, Geo. E. Carr, of Zion, Oregon, Geo. A. Whitney of Eugene, Oregon.

Any and all persons claiming adversely the above-described lands are requested to file their claims in this office on or before said 1st day of September, 1900.

J. T. Bridges, Register.

NOTICE FOR PUBLICATION.

Land Office at Roseburg, Oregon May 8, 1900.

Notice is hereby given that the following-named settler has filed notice of his intention to make final proof in support of his claim, and that said proof will be made before Register and Receiver at Roseburg, Oregon, on June 22, 1900, viz: Eugene E. Finney, on his H. E. No. 9193 for the SE 1-4 NW 1-4 Lots 5 & 6 & NE 1-4 SW 1-4 Sec. 2, T. 22 S., R. 3 W.

He names the following witnesses to prove his continuous residence upon and cultivation of said land, viz: Ali S. Powell, Isham Barnett, A. H. Powell, J. Taylor, of Cottage Grove, Oregon.

J. T. Bridges, Register.

MINES & MINING.

The Fifth of a Series of Articles on the Geological Construction and Formation of Mineral Zones.

[CONTRIBUTED.]

The prolonged subsidence during which the coal measures were accumulated were at last brought to an end by a series of great terrestrial disturbances, whereby the lagoons and coal-growing swamps were in a great measure effaced from the geography of the earth. So abrupt in some regions is the discordance between the coal measures and the next series of strata that geologists have naturally been led to regard this rock as one of great chronological importance, serving as the boundary between two distinct systems; nevertheless, so far as the evidence of fossils go, there is no such interruption of the geological record as might be supposed from this stratigraphical unconformability, many of the carboniferous types having survived the terrestrial disturbances.

To the various rocks of the system the name of Permian was given, from the Russian province of Perm, where they are well developed. They consist of red sandstone, marls, conglomerates and breccias, with limestone and dolomites. The sandstones are usually bright brick red in color, owing to the presence of earthy peroxide of iron, which serves to cement the particles of sand together. The shales or marls are colored by the same pigment. So characteristic is this red color of the rocks that they form part of a great series of strata originally known as NEW RED SANDSTONE.

Volcanic action showed itself during the Permian period in many parts of the world, but with less activity than during the carboniferous period. The great series of red strata heretofore mentioned as overlying the carboniferous system was called the New Red Sandstone, to distinguish it from the Old Red Sandstone which underlies that system; but the progress of geology on the European and North American continents eventually proved that, notwithstanding their general similarity of lithological character, two series of rocks had been comprised under the general title of New Red Sandstone. The older of these, separated from the rest under the name of Permian, was placed at the top of the great succession of Palaeozoic formations. The younger division was called Trias, and was regarded as the first system in the great Mesozoic or secondary succession.

When we ascend into the Trias, though the physical conditions of depositions are much the same as in Permian time, we meet with a decided contrast in the organic remains. A new and more advanced phase of development presents itself in that richer and more varied assemblage of plant and animal life which characterized Mesozoic or secondary time. The word Trias has reference to the marked three-fold division of the rocks of this system. They consist of bright red sandstones and marls or clays, with beds of gypsum, anhydrite, rock salt, dolomite and limestone. These rocks, so closely resembling the Permian series below, had evidently a similar origin.

The system which follows the Trias has received the name of Jurassic, from the Jura mountains, where it is well developed. It contains the record of a great series of geographical changes, which entirely effaced the inland basins and sandy wastes of the previous period.

The flora of the Jurassic period is marked by the same general character as that of the Trias, ferns, conifers and cycads being its distinguishing elements. Cycads now abound, and here we find the first evidence of our pines and firs. This vegetation flourished luxuriantly over a vast area, which grew so densely as to give rise to thick peaty accumulations which now form beds of coal. It went far northward, for its remains have been abundantly preserved in Spitzbergen, where a number of cycads have been found among them. These plants unquestionably grew and flourished within the Arctic circle, so that, though the climate of the globe was already beginning to immerge from the greater uniformity of Palaeozoic time, the Arctic regions still enjoyed a temperature like that of subtropical countries at the present time.

WAS IT A MIRACLE?

"The marvellous cure of Mrs. Rena J. Stout of Consumption has created intense excitement in Cammack, Ind." writes Marion Stuart, a leading druggist of Muncie, Ind. She only weighed 50 pounds when her doctor in Yorktown said she must soon die. Then she began to use Dr. King's New Discovery and gained 37 pounds in weight and was completely cured." It has cured thousands of hopeless cases, and is positively guaranteed to cure all Throat, Chest, and Lung diseases. 50c and \$1.00. Trial bottles free at BENSON DRUG CO., Cottage Grove.

AN EPIDEMIC OF DIARRHOEA

Mr. A. Sanders, writing from Cocoanut Grove, Fla., says there has been quite an epidemic of diarrhoea there. He had a severe attack and was cured by four doses of Chamberlain's Colic, Cholera and Diarrhoea Remedy. He says he also recommended it to others and they say it is the best medicine they ever used. For sale by BENSON DRUG CO., Cottage Grove.

For a fine assortment of fishing tackle and sporting goods GRIFFIN & VEATCH Co. are the leaders.
