If refused to shaped plece of extra heavy sheet from scribes the original project framed by ment to be temporary, until the will be Rear Admiral Taylor, and heed the words of the priests who or steel, strong enough to hold the pets up to the cylinder. The efficacy of the machine depen is almost on this plece of-steel or iron. It must be stiff enough to hold the pens up to the cylinder and still springy enough to allow them to go through without splitting the peas. Then make a box or frame in which the cylinder rests. This is not Important only in so far that it holds up the cylinder, but any old thing that

will do that will accomplish that end. The handle is represented on the cylinder, but I would recommend that power of some description be used, as 1 know from personal experience that it requires a good deal of muscle to make it go when it is full of pen vines. I ground out five acres of peas with mine .-- Dave B. Miller, in St. Louis Globe-Democrat.

A COW PLA HITLERS

#### Unprofitable Orcharis.

There are a great many orchards about the country that are being abandoned because they are unprofitable. three days shipping was nearly at a standstill. Skagway steamers were forced to seek shelter and the steam-times out of a hundred, to the wrong methods of the owner. There have been recent reports of the abandonment of peach orchards in Georgia, and that, too, right in the heart of the region famous as a profitable peach country. Successful peach growers in Georgia give their trees and the soil in which they are planted constant, intelligent care, and as a result their venture is profitable. The owners of the unprofitable orchards set out the trees, and after a year or two gradually abandon them to their fate. It is true they may occasionally fertilize the soil, and per-

are afflicted with galled shoulders, especially during the warm weather, suffor from ill-fitting collars, Even an old collar can be adjusted by the metisod mentioned. Galled shoulders may be avoided by taking off the collar each night and washing it thoroughly. This removes all of the perspiration and the dust on the collar.

### Home-Mate Wintmills,

The home-made windmills seem to be most plentiful in the State of Nebraska, along the broad valley of the Platte river, and from Omaha west to the State line; for over five hundred miles they are to be found in great numbers. They are often crude in appearance and of comparatively low effilency, but the aggregate amount of work they do is by no means insignificant. They will pump water for the stock and house, run light machinery about the farm, and sometimes furnish water to irrigate small tracts of land. The most important feature in the construction of these home-made mills is cheapness, hence the ingenuity of the farmer is shown by the use of odds and ends, which he works into his mill to save the purchase of new material. Old wire and bolts, scrap lumber and old poles, neglected parts of buggles, mowers and reapers, cranks, chains and sprocket wheels, all find their way into these strange windmills. Many of the mills have cost their makers nothing at all but time, others have cost \$2 or \$3, and occasionally in the case of the more elaborate ones the cost may run to \$25, \$50 or \$75, but \$2.50 is the fair average for a very large number .- U. S. Geological Survey Bulletin.

Swellel Jaws in Sheep. There has been considerable complaint of late years by many sheep raisers that some of the animals are troubled with swellings under the jaw, and when such swellings were lanced only water came from the opening. Such swellings are of a dropsical nature, and the trouble is termed anaemia by veterinatians. The term anaemia, indicating as it does a lack of blood in the system, should point out to the sheep raiser the probability of there being something wrong in his system of feeding. True, the trouble may come from some internal parasite, such as the stomach worm, but the chances are it is due wholly to poor feeding. When the swellings appear on the jaws of the sheep the animals should at once be put on a better ration, such as a mixture of ground oats, bran and oll meal. This ration should be given three times a day, and a teaspoonful of a mixture of equal parts of dried sulphate of iron, ground gentian and ginger root should be given in the feed for each sheep. Of course, the usual roughage should not be omlitted from the ration .- Indianapolis News.

Winter Spraying of Fruit Trees. In sections of the West the growing of cherries has developed into a promising industry, but during the past season the trees have suffered much from fungous diseases which caused the folinge to drop. The only relief from this trouble comes from spraying, and during the winter the cherry and plum grower can put up a stiff fight against the trouble and do much toward overcoming it. The proper solution is four pounds of blue vitriol to each fifty galons of water. Less solution will be needed during the time the foliage is off the trees, hence the work is less ex-The pensive than summer spraying. spores of the fungus are lodged about the buds on the trees and are easily reached with the insecticide after the foliage is dropped. Two or t lugs during the winter, the last one just before growth starts in the spring, will do much toward ridding the orchards of fungous diseases.

## and frightened his family, until they the other side of the cell and refused called for police protection. to answer them. MOST MAY ESCAPE. Certificate of Reasonable Doubt Granted by Supreme Court Judge. New York, Oct. 31 .- Justice Mc-

Lean in the supreme court, today paper, in order to stay his sentence of 12 months' imprisonment for the 'Murder vs. Murder," which appeared the day of President McKin-1 y's assassination. Justice McLean s ys the only proof to support the judgment is that Most purloined an article expressing certain sentiments, written, by another half a century ago, and published it as his own, "in paper professedly of some circulation, but which circulation is shown by the sale of but a single copy, that purchased by the police, probably for the purpose of prosecuting." He fur ther says that it may be doubted reasonably whether the judgment, even

or Salonica. the Gulf of Smyrna.'

Several morning papers confirm miles. This he accomplished by ridabout the matter.

#### Earl Li's Condition Grave.

Pekin, Nov. 4 .- Li Hung Chang's foreign physicains tonight pro-nounced his condition grave. He has had hemorrhages for the last two days. His death would probably affect the negotiations as to Manchuria, which he had been conducting with M. Paul Lessar, Russian minister to China.

## City Marshal Killed.

Levy, colored, this afternoon.

#### Blizzard at Butte.

Butte, Mont., Oct. 31 .- Butte was struck by a blizzard early this evening. The temperature dropped suddenly nearly 25 degrees, and a fine enow, almost of the character of hail, began falling. The wind, which blew a gale, was bitterly cold, and marched with the elaborately conthere was considerable suffering in various portions of the city where no provision had been made for the appearance of winter at such an early date.

#### Big Orange and Lemon Crop.

San Francisco, Oct. 31. - The orange and lemon shipments to the of general satiafaction prevails in consequence.

The island commands under very trying conditions. In the entrance to the Dardenelles and one instance broke a trail through snow waist deep for a distance of 100

Washington, Oct. 30 .- Sunday was ment board has issued a statement the 43d anniversary of the birth of

head and breast and her recovery is dustry pay by simply setting out trees, doubtful. Three neighbors were all it is time that they turn over a new ecame necessary literally to tear the Exchange. clothing from her.

#### Gun at Army Fort Exploded.

Leavenworth, Kan., Oct. 30 .- By an explosion of a Colt's automatic firing gun at Fort Leavenworth today, Captain Menoher and five men of the Twenty-eighth battery of field artilery were wounded, three severely. Omstireysen. The British lost 28 men killed and 55 wounded. The Boers carried light British wagons. The Repblicans appear to have paid which struck and injured the men.

#### Boers Court Martialed and Shot.

London, Oct. 29 .- The South Afican mail brings news that several Boers who were captured wearing Khaki uniforms were court martialed and shot. It seemed also that Commandant Theron crossed the Cape line, west of Touwse river station, September 23.

#### Confident of Rescue.

Washington, Oct. 30.-The state department officials are more santo the successful outcome of the nication with the kidnapers, but the reports they have received from Spencer Eddy, at Constantinople, age the belief that they are about at

a point where direct negotiations can be opened with the brigands. Quick Way to Settle With Americans.

Washington, Oct. 30 .- As a quick way of adjusting the claims of the small number of American citizens who were deported from South Africa

painfully burned while extinguishing the flames. Mrs. Busler ran into the fruit growing is profitable only when it yard with her clothing ablaze and it is conducted on business principles .-

#### Wire Fence Conven ence. A wire fence always presents to those who understand the "power" of its

harbs a formidable appearance, and, in truth, is an unpleasant affair to cross, either by climbing over or crawling under, or between the strands. Happily, however, the accompanying illustration shows a convenient and

safe arrangement whereby such barriers may be crossed as often as desired, and that without any tension on the wires being lost by cutting a gateway.

It is simply a double stepladder, and can be constructed by any one at all guine than they have been of late as handy with tools in a short time, the railing consisting of gas pipe, the lower ends of which should be deeply inserted into the ground. Where a wire fence has to be crossed frequently in some out-of-the-way locality this device is of great value.

#### Fitting Horse Co'lars.

In buying a new collar, it is a good plan to have it fitted to the horse as nearly as possible, and then soak it in water over night. In the morning put it on the horse after wiping off all the

moisture, and then adjust the hames at top and bottom snugly so as to bring the leather collar to the form of the animal's neck and shoulders in a perand the Transvaal as a military ne- feet fit. While the leather is wet it among the claimants. This proposi- of the horse, and will remain in that grass, with the cows frantic to get at that nine out of every ten horses who condiment.

#### Top-Dressing Meadows.

In many sections there is a strong prejudice against the fall top-dressing of meadows, the claim being that the effect of the dressing is lost before growth begins in the spring. This is an assumption that is scarcely warranted in most enses, for even if stable manure is used as a dressing it is fair to assume that the grass roots will get the benefit of at least a portion of it, enough to make it pay for the application. A mixture composed of one-third muriate of potash, one-third fine bone and one-third nitrate of soda is an ideal one for top-dressing meadows. An application of 500 pounds of this mixture to the acre seems expensive, but when It means better hay and more of it, is It not profitable even though it figures up at the rate of about \$3 for each ton of hay?

New Industry for Farmers.

In some sections where there are a number of breeders of poultry for the fancy market the chicks are farmed That is, they are placed in the out. hands of farmers who can give them plenty of range. Many breeders pay a stated rent per acre for the range occupled by the chicks; others work with the farmer on the share plan. This method is adopted because breeders understand that they can obtain better and stronger fowls when they are raised on the range than in any other way. It is certainly fair to assume that If the farmer will set about learning the principles of poultry raising he will succeed in the work, for he has everything in his favor and lacks only the knowledge of the requirements of poultry.

#### Salt the Cows Daily.

Do not omit the daily allowance of salt to the cows. Salt not only is an appetizer, but it is an aid to digestion and especially to digestion of the protein elements in feed. The old fashion of taking a measure of salt once or twice a week and scattering it on the it, is not the best way to supply this
