

# SISTERS OF CHARITY

Use Pe-ru-na for Coughs, Colds, Grip and Catarrh—A Congressman's Letter.

In every country of the civilized world Sisters of Charity are known. Not only do they minister to the spiritual and intellectual needs of the charges committed to their care, but they also minister to their bodily needs.

With so many children to take care of and to protect from climate and disease, these wise and prudent Sisters have found Peruna a never failing safeguard.

Dr Hartman receives many letters from Catholic Sisters from all over the United States. A recommendation recently received from a Catholic institution in Detroit, Mich., reads as follows:

Dr. S. B. Hartman, Columbus, Ohio: Dear Sir:—The young girl who used the Peruna was suffering from laryngitis, and loss of voice. The result of the treatment was most satisfactory. She found great relief, and after further use of the medicine we hope to be able to say she is entirely cured.

—Sisters of Charity. The young girl was under the care of the Sister of Charity and used Peruna for catarrh of the throat with good results, as the above letter testifies. Send to The Peruna Medicine Co., Columbus, Ohio, for a free book written

by Dr. Hartman. The following letter is from Congressman Meekison, of Napoleon, Ohio: The Peruna Medicine Co., Columbus, Ohio:

Gentlemen: "I have used several bottles of Peruna and feel greatly benefited thereby from my catarrh of the head, and feel encouraged to believe that its continued use will fully eradicate a disease of thirty years' standing."—David Meekison.

Dr. Hartman, one of the best known physicians and surgeons in the United States, was the first man to formulate Peruna. It was through his genius and perseverance that it was introduced to the medical profession of this country.

If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case, and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of the Hartman Sanitarium, Columbus, O.

## THREE USEFUL TRAPS.

How to Make and Set a Deadfall, and Some Other Traps.

Here are directions for making some of the more simple deadfalls and other traps:

One of the best and most certain deadfalls for bear and other large animals is made as follows: Select some favorite haunt of the animal and construct there a pen of large stakes. These should consist of young trees, or of straight, strong branches, about three inches in diameter, and should be of such length as to reach a height of four or five feet when set in the ground. The width of the pen should be about three feet, its depth about four feet, and it should be roofed over with cross pieces of timber to prevent the bait from being taken from above. A straight log, about eight inches in diameter and six feet in length, should now be rolled against the opening of the pen and hemmed in by two upright posts, one on each side, directly in line with the sides of the pen.

In order to understand perfectly the arrangement of the rest of the trap, we will give a rough drawing of it, with the pieces in place as they should appear when set. Drive a post (A), at the upper end of which you have cut a notch, with its flat surface down, into the ground at the left-hand back corner of the pen, leaving three feet above ear

FIG. 2. STICKS FOR FIGURE-FOUR TRAP.

ground. Another post (B), having a notch near the top, with its flat surface uppermost, should be driven into the ground at the outside right-hand side of the pen, and on a line with the first. A third post (C), with a notch at its upper end, should be planted outside the pen on the right-hand side, and in a line with the first. Now get a forked branch about three feet in length, and fasten a square board across its ends. At the junction of the forks bore an auger-hole. Into the treedle (D), insert about three feet in length (E). Next, procure two poles (L and B), and you are ready to set the trap.

Pass the pole (D) between the stakes of the pen, laying one end in the notch of the post (A) and holding the other beneath the notch of the post (B). The second pole (E) should then be adjusted, one end being placed in the notch (C) and the other caught beneath the projecting end of the pole (D). The deadfall, which should consist of a log some fifteen or twenty feet in length, should now be placed in position across the front of the pen, one end resting on the ground and the other elevated and resting on the projecting end of the last pole adjusted (E). The treedle should next be placed in position over a short stick of wood (F), and the upright stick at the base, secured beneath the edge of the latch-pole (D). The deadfall should then be sufficiently weighted by placing heavy logs against its elevated end; and, having this, the trap is set.

The best bait is honey, which no bear can resist, and this should be placed on the ground at the back of the inclosure or smeared on a piece of meat hung at the end of the pen.

This is the most effective deadfall for bears, because the animal, in seeking the tempting feast of honey, passes beneath the suspended log, and, resting his heavy front paws on the treedle, pushes up the upright stick, thus forcing the latch-piece from the notch and releasing the heavy log, which, if sufficiently weighted, will fall on his back with enough force to kill him.

This is one of the oldest as well as most useful of all the traps which can be made. It is ingenious, easy to make (consisting of but three sticks), and easy to set. It possesses the added advantage that it can be used in a variety of ways, from the supporting of a heavy deadfall to a light box for catching small game alive.

I am giving two illustrations, one of a trap set and supporting a heavy stone as a deadfall for

large animals, and another of the three sticks used in setting it. These sticks, of course, are of no regulation size, but should vary according to the size of the trap you wish to set; they should all be square, however, and from a half inch to an inch in thickness.

For animals the size of a rabbit the following dimensions will answer: The bait stick (A) should be about nine or ten inches in length, one end pointed, and the other furnished with a notch as indicated. The upright (B) should be a little shorter; one end beveled and the other square. About three or four inches from the square end, and on the side next to that beveled, a square notch should be cut, one-third of an inch deep and just wide enough to relieve the bait stick (A) without holding it fast. The third stick (C) should be seven or eight inches in length and have one end whittled to a bevel, the other being notched as shown in the cut.

To set the trap, place the upright stick (B) with its pointed end upward. Rest the notch of the slanting stick (C) on the summit of the upright, placing the stone or box, or whatever you may choose to use for the trap, on its end. Now by hooking the bait stick (A) on the beveled end of the slanting stick, and fitting it into the square notch of the upright, the whole will catch and hold itself in position until the bait stick is disturbed. The bait should be placed on the sharpened end of this stick, and always project beneath the trap.

This is one of the best and simplest

traps for securing small animals alive. It is simply a long square box about two to two and a half feet in length and about nine or ten inches square, each end supplied with a heavy lid working on two hinges. To each of these lids is fastened a slight strip of wood so long that when the lids are opened level with the top of the box will nearly meet over the top. In the middle of the box on the top, at the point where the two sticks come together, bore a small hole a third of an inch in diameter. Tie to the end of each strip of wood a couple of inches of string with a large knot at the end.

The method of setting this trap is simply to open the lids until the strips of wood are parallel with the top of the box; drop the knotted ends of the strings through the hole and secure them there by lightly plugging the hole from the inside with a stick, to which a piece of bait is attached. When the bait is seized the stick is at once loosened and withdrawn from the hole, releasing the strings and allowing both lids to fall shut once. On the outside of each end of the bottom boards should be fastened a tin catch. This is simply a piece of tin some two inches in length. One end is bent out at a sharp angle and the other fastened to the box, so that when the lids fall the bent end will snap over and securely hold them shut.—L. W. Brownell, in *Montreal Star*.

Like everything else, there are good seeds and bad seeds. Seeds that grow and seeds that don't grow; seeds that yield and seeds that don't yield, and a little thought given now to the selection of the seed you'll need, will be found time well spent, though realized much better at the harvest if you select the world-famous Ferry's Seeds—the kind that always yield. For nearly half a century Ferry's Seeds have been known and sown wherever good crops are grown, until farmer and gardener alike have learned to depend upon their wonderful reliable growing and yielding qualities, year after year, to the excitement of all others.

Unfortunately the seed business seems to afford a means for many unscrupulous people, who aim to blind the unwary to quality, through little-known price and beautiful claims; who in reality have nothing to substantiate their claims, no reputation at stake, no past record as proof. It is better to pay a little more for the seed and be assured of a great deal more at the harvest by sowing Ferry's Seeds. The 1905 Seed Annual, which is sent free, will be found unusually interesting and instructive. Write for it today. Address D. M. Ferry & Co., Detroit, Mich.

Conservation of Energy. "What was your idea in having Bertha learn typewriting?" "Well, she was always drumming with her fingers, and I thought she might as well do it to some purpose."

THE "PERFECT" LAMP. Stewart & Grant, Portland, Or., Placing a Wonderful Lamp on the Market.

The "Perfect Match-Lighter" lamps advertised in our columns today by the Stewart & Grant Lighting Co., of Portland, Oregon, are well worth the attention of all householders and storekeepers. The inventors, having had years of experience in using, selling and repairing all standard makes of gasoline lamps, have carefully designed this "Perfect" lamp, so that the defects of other lamps have been avoided and many important improvements substituted. Everbody interested should send to Stewart & Grant Lighting Co., 43 Third Street, Portland, Oregon, for pictures and full description of this new "Perfect" lamp. Sales agents are wanted in every city and town in the United States.

Canadian Holidays. Canada has the most holidays of any British colony. Including Sundays, Canadians have ninety-five holidays yearly.

ABSOLUTE SECURITY. Genuine Carter's Little Liver Pills.

Must Bear Signature of *Dr. Wood*. See Pac-Simile Wrapper Below. Very small and as easy to take as sugar. CARTER'S LITTLE LIVER PILLS. FOR HEADACHE, FOR DIZZINESS, FOR BILIOUSNESS, FOR TORPID LIVER, FOR CONSTIPATION, FOR SALLOW SKIN, FOR THE COMPLEXION. PURELY VEGETABLE. CURE SICK HEADACHE.

Corrected Wheat for little Fets; Flaked Pine for Dot; while "Bub," The infant Spratt, is waxing fat On Battle Creek Near-Grub. Chicago Tribune.

An Old Enemy. Persons who rise in the world are not always as frank about their former place in life as good sense and humor might lead them to be. Dean Hole, in his book of reminiscences, "Now and Then," tells a little story of one whose humor did not desert him in time of prosperity.

A footman who had begun life as a doctor's boy grew interested in the study of medicine, and spent his leisure hours reading medical books. He came to the United States, worked hard as a student and as a physician for many years, and attained a large practice. After some years of absence he returned to England. Seated one day at luncheon with those whom he had formerly served, he suddenly astonished the company by holding up the mustard pot and addressing it with, "Hast thou found me, O, mine enemy?"

Afterward he explained that the only reproach he had incurred from the lady who was then at the head of the table was evoked by the neglected condition of the mustard pot.

Instead of His Throat. Sharpe—Still, he has a correct ear for music. Wheelton—Well, that might do him some good if he sung through his ear.

Words Celestials Don't Know. There is no word in the Chinese language that conveys an intimation of what we term public spirit, nor is there a synonym for patriotism.

When a man and his wife have denied themselves that their daughter may enjoy an extended visit in some other town, she often rewards them by spending her first evening after she returns relating how she hated to come back.

"Dr. August Koenig's Hamburg Breast Tea," writes Mr. F. Batsch, of Horicon, Wis., "enabled me to get rid of an obstinate cough; we feel very grateful to the discoverer of this medicine."

Blameless. Amateur—When I stand on the stage I see nothing, and I am conscious of nothing but the role I am playing. The audience disappears entirely. Friend—Well, I can't blame the audience much for disappearing.

The Kind of Seeds That Yield. Like everything else, there are good seeds and bad seeds. Seeds that grow and seeds that don't grow; seeds that yield and seeds that don't yield, and a little thought given now to the selection of the seed you'll need, will be found time well spent, though realized much better at the harvest if you select the world-famous Ferry's Seeds—the kind that always yield. For nearly half a century Ferry's Seeds have been known and sown wherever good crops are grown, until farmer and gardener alike have learned to depend upon their wonderful reliable growing and yielding qualities, year after year, to the excitement of all others.

Unhappily the seed business seems to afford a means for many unscrupulous people, who aim to blind the unwary to quality, through little-known price and beautiful claims; who in reality have nothing to substantiate their claims, no reputation at stake, no past record as proof. It is better to pay a little more for the seed and be assured of a great deal more at the harvest by sowing Ferry's Seeds. # I Coughed

"I had a most stubborn cough for many years. It deprived me of sleep and I grew very thin. I then tried Ayer's Cherry Pectoral, and was quickly cured." R. N. Mann, Fall Mills, Tenn.

Sixty years of cures and such testimony as the above have taught us what Ayer's Cherry Pectoral will do. We know it's the greatest cough remedy ever made. And you will say so, too, after you try it. There's cure in every drop.

Consult your doctor. If he says take it, then do as he says. It's his best recommendation. Leave it with him. It's your money.

CONSUMPTION. About 500 B. C. Anaxagoras of Ionia was born. When he grew up in wisdom, he was the first to teach the course and cause of both solar and lunar eclipses and to give his followers rules whereby they could distinguish planets from fixed stars. He was punished for declaring that the sun was not a God.

CONQUERS PAIN.

20 MILLION BOTTLES SOLD EVERY YEAR. Happiness is the absence of pain, and millions have been made happy through being cured by Dr. James Olin's RHEUMATISM, NEURALGIA, TOOTHACHE, HEADACHE, LAMENESS, SCALDS, BURNS, SPRAINS, BRUISES and all pains for which an external remedy can be applied. It never fails to cure. Thousands who have been declared incurable at baths and in hospitals have thrown away their crutches, being cured after using Dr. James Olin's. Directions in eleven languages accompany every bottle.

Canadian Holidays. Canada has the most holidays of any British colony. Including Sundays, Canadians have ninety-five holidays yearly.

# Sleeping Volcanoes

A thin, vapery smoke, lazily ascending from its crater may be the only visible sign of life in the sleeping volcano, but within is a raging sea of fire, molten rock and sulphurous gases. Those who make their homes in the peaceful valleys below know the danger and, though frequently warned by the rumblings and quakings, these signs of impending eruption go unheeded. They are living in fancied security when the giant awakes with deafening roars and they are lost beneath a downpour of heated rock and scalding ashes.

Thousands of blood poison sufferers are living upon a sleeping volcano and are taking desperate chances, for under the Mercury and Potash treatment the external symptoms of the disease disappear, and the deluded victim is happy in the belief of a complete cure, but the fires of contagion have only been smothered in the system, and as soon as these minerals are left off will blaze up again. Occasional sores break out in the mouth, a red rash appears on the body, and these warning symptoms, if not heeded, are soon followed by fearful eruptions, sores, copper colored spots, swollen glands, loss of hair and other sickening symptoms.

Mercury and Potash not only fail to cure blood poison, but cause Mercurial Rheumatism, necrosis of the bones, offensive ulcers and inflammation of the Stomach and Bowels.

The use of S. S. S. is never followed by any bad results. It cures without the slightest injury to the system. We offer \$1,000.00 for proof that it contains a mineral of any description. S. S. S. is an antidote for contagious blood poison, and the only radical and permanent cure known. It destroys every atom of the virus and purifies and strengthens the blood and builds up the general health.

We will mail free our special book on Contagious Blood Poison, which gives all the symptoms of the disease with full directions for home treatment. Medical advice is furnished by our physicians without charge.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

Gentlemen: For over four years I suffered greatly from a severe case of contagious blood poison. I went to Hot Springs, staying there four months at a big expense. I then consulted physicians, who prescribed Mercury. Nothing did me any good, in fact, the treatment proved more harmful than beneficial. I mentioned my case to a friend, who told me that S. S. S. had certainly cured him. I at once commenced its use, and in six months could find no trace of the disease whatever. This was about two years ago. I continued S. S. S. for some time to make sure of a permanent cure, and I own truthfully say I am entirely well.

D. M. SANDERS.

THE SWIFT SPECIFIC CO., ATLANTA, GA.

FIG. 3. DEADFALL OF FIGURE-FOUR TRAP. large animals, and another of the three sticks used in setting it. These sticks, of course, are of no regulation size, but should vary according to the size of the trap you wish to set; they should all be square, however, and from a half inch to an inch in thickness.

For animals the size of a rabbit the following dimensions will answer: The bait stick (A) should be about nine or ten inches in length, one end pointed, and the other furnished with a notch as indicated. The upright (B) should be a little shorter; one end beveled and the other square. About three or four inches from the square end, and on the side next to that beveled, a square notch should be cut, one-third of an inch deep and just wide enough to relieve the bait stick (A) without holding it fast. The third stick (C) should be seven or eight inches in length and have one end whittled to a bevel, the other being notched as shown in the cut.

To set the trap, place the upright stick (B) with its pointed end upward. Rest the notch of the slanting stick (C) on the summit of the upright, placing the stone or box, or whatever you may choose to use for the trap, on its end. Now by hooking the bait stick (A) on the beveled end of the slanting stick, and fitting it into the square notch of the upright, the whole will catch and hold itself in position until the bait stick is disturbed. The bait should be placed on the sharpened end of this stick, and always project beneath the trap.

This is one of the best and simplest

traps for securing small animals alive. It is simply a long square box about two to two and a half feet in length and about nine or ten inches square, each end supplied with a heavy lid working on two hinges. To each of these lids is fastened a slight strip of wood so long that when the lids are opened level with the top of the box will nearly meet over the top. In the middle of the box on the top, at the point where the two sticks come together, bore a small hole a third of an inch in diameter. Tie to the end of each strip of wood a couple of inches of string with a large knot at the end.

The method of setting this trap is simply to open the lids until the strips of wood are parallel with the top of the box; drop the knotted ends of the strings through the hole and secure them there by lightly plugging the hole from the inside with a stick, to which a piece of bait is attached. When the bait is seized the stick is at once loosened and withdrawn from the hole, releasing the strings and allowing both lids to fall shut once. On the outside of each end of the bottom boards should be fastened a tin catch. This is simply a piece of tin some two inches in length. One end is bent out at a sharp angle and the other fastened to the box, so that when the lids fall the bent end will snap over and securely hold them shut.—L. W. Brownell, in *Montreal Star*.
