CHAPTER XXI.

Sedge Hill was more desolate after Mury Holland had departed. Though Miss Holland have it not, she had been the rating agent of that house, for good or will for a longer period than that from which the opening of our story dates. A foriorn little woman, set forever under aspirion by an adverse fate boyond her power to resist, she was still to be missed when she had passed from the home into which Simon Culwick's charity had in-

stalled her.

The news reached Thomas Eastbell
when Wills had brought him his lunch
into the picture gallery after he had rung
for it, not before. It was strange what s small amount of respect he had gained from the servants during his stay, and with what distrust he was regarded. In response to one or two questions, the that Miss Holland had left Sedge Hill for

"And a good job, too," said Thomas Easthell frankly and inelegantly, "what did the old gal want with her about the place? It's full enough now of people who've no business here, although they're making themselves scarce by degrees. Where's that Culwick?"

"The round master, sir?"
"The young humbug!—the roung patter?" acreamed Thomas Eastbell with per acreamen tames seems that up about the roung master, or rou'll go next, if I have anything to do with this house—which I may have—which I shall have, mind rou—though everybody treats me had here."

Thomas Eastbell consumed his lunch with difficulty. He had no appetite, but it was necessary to keep himself up, the captain had said, and all his life he had believed in Captain Peterson. He fell sale-pa fifer his meal, and when he woks up he stared vacantly round, and fought hard to recollect where he was, and how lunc he had an invested was, and how lunc he had an invested was, and how lunc he had an invested where he was, and how hard to recollect where he was, and how long he had sat huddled in the armchair, an angular distortion in his comfortless

> EXPERIMENTS ON THE BRAIN. Electricity In Not Dangerous When a Mild Corrent In Used.

Experiments on the brain of a living noject with electric currents have been comparatively rare, as there has prevalled among physicians and physiologists the idea that such a course of experimentation was extremely dangerous. There have recently unblished, however, records of some experiments carried on by M. S. Leduc, with the object of using the electric current to produce sleep and of studyng the effect on the brain generally. In erry experiments it was shown that the brain is the best conductor of elec-tricity in the human body, being about .000 times more conducting than muscie. It was also observed that when continuous current was passed through the head frum one ear to the other, that the sensation of giddiness was produced and that objects appeared to revolve in the same direc lons as the current flowed. However, then the electrodes are placed on the orshend and neck and the current sent from back to front the effects are in-nocuous so long as a mild current is used, and in some mans may be bene-ficial. According to M. Leduc, the most satisfactory current is one of four millamperes at thirty volts, which is roken or interrupted 100 times a sec and for nine-tenths of the period of sterruption. The first effect noted was the disappearance of the faculty of speech, after which followed the oss of the motor faculties. Under ordinary conditions there is no affection of the respiration or pulse unless the surrent is increased, and then it may case. The patient is said to awaken netantaneously from the electric sleep and to experience a feeling of refresh-

Frankly Owned His Fault. Although there has been complaint f late about a growing lack of discipline in the ranks of the French army, he demoralization has not, it is believed, progressed seriously, as the folowing incidents, coming from a

French naval port, will illustrate:
A general holding a high command nade his appearance a few days ago at the barracks of an infantry reginent, which, in obedience to his orders, was promptly drawn up in the yard. Then he explained the reason in a brief address. He said that as he was walking in the town attired in mufti m the previous day a man belonging o the corps, who was the worse for iquor, accosted him rudely and asked him to stand him a drink, "Let him

step out of the ranks," he concluded. Immediately a bugier emerged, and, saluting, said: "It is I, mon general." The incident is characteristic and propos of it one is reminded of such an adventure which befell a certain French marshal, A grenadler, who was exasperated at some injustice that had been done him, pointed his pistol at him and pulled the trigger, but it did not go off. Without moving a muscle, the veteran cried: "Four days in the cells for keeping your arms in bad state."
