Copper Prospects.

Present high prices, the result of a
| generally decreased consumption and a
| bulky rising production which, the
| way is less than had been
| anticipated earlier in the year, indic-
| ates that copper mining dividends
| will be larger than hereinafter.
| Many mines that were opened
| while the copper boom was so
| much strong are finding their
| mining operations far more
| profitable than anticipated.
| As copper mining dividends
| are on the increase, the
| market for copper is
| strengthening.
