Lovers of baseball are enthusiastic over the showing made by Prof. Dunton as Pitcher for the "fats" in Friday's game. Many who never knew before, now understand why the professor is so strong on athletics in his school work—it is evident that, at no distant day he has been an athlete of no mean class.

Hundreds of people from the country are in Cottage Grove attending the Chautauqua and witnessing the sports and amusements provided by the town people. The numbers on the Chautauqua that have been presented have been well received by good crowds, and many believe the best is yet to come. Mr. Davis, the cartoonist will have the best hearing, as that class of work on the platform is new to many people, while lectures and musical programs are an old story. The entire program is good.

Euler's Wonderful Memory.
Leonhard Euler, who was born in 1707 and died in 1783 at St. Petersburg, where he spent his life as a teacher of great power and as a prolific writer, was an instance of the genuine mathematician endowed with almost superhuman powers. He left more than 200 manuscript treatises on his favorite subject, and the bulk of the works published by his academy between 1727 and 1783 were from his pen. In his old age he was totally blind. Then he carried in his memory a table of the first six powers of the "series of natural numbers up to 100."

It is related that on one occasion two of Euler's students attempted to calculate a converging series. As they advanced they found they disagreed in the result by a unit in the fifteenth figure. The question was referred to Euler, who decided to make the calculation. He did this mentally, and his result was found to be correct.

Ends of the Earth.

If you stand at the north pole you can look in only one direction—south. No matter how you may twist around on your heels, it is always toward the south that your eyes are directed. North as a terrestrial direction has vanished. You have arrived at the end of north. You are "where it lives." Or else we may say that north has suddenly sprung into the sky and is now at an unattainable distance directly over your head. A moment before your foot touched the pole north was straight ahead of you, and you had all the four cardinal points to choose from—east, west, north and south. Now three of them have vanished and south alone remains. The reverse is true at the south pole, where all directions on the earth's surface are alike north. In view of these facts we may speak of the north and south poles as the "ends of the earth." They are the two turning points, arrived at either one of which there is no choice left but to start toward the other.—New York Journal.

An Appropriate Sign.

Mrs. Smith—I see the contractor has put the sign "Sold" on the new house next door. Mr. Smith—Yes, and the sign "Stung" should be put on the buyer.—Kansas City Journal.

Empty hours, empty hands, empty companions, empty words and empty hearts draw evil spirits as a vacuum draws air.—William Arnot.
