How to Carve the Turkey.

Insert the carving fork at the small end of the breastbone, plunging it down so as to gain good command. First cut off the leg with the second joint; then the wing on the side farthest from you. Tip the turkey from you and take off the leg and wing from the side toward you. Next carve thin slices from each side of the breast; then remove the wishbone from the carcass. Cut through the ribs, first on one side then on the other. With a quick turn of the knife divide the front or breast from the back of the carcass. Now remove the fork, which has not been withdrawn from first to last. Divide the second joint from the drumsticks, and make two pieces of each. Then divide the back, lower and upper half, at the second joint. The turkey is now ready for serving.
