Is only expensive to people who are wasteful and careless. To you, who

are naturally careful, it does not

It is economical because it can be quickly turned off when not needed. With gas or kerosene there is the temptation to let light burn when not needed to save bother of lighting and adjusting. In some homes the electric light bills amount to only one or two dollars per month. You can probably get some kind of artificial light for less money than electric light, but does it save you anything when it limits opportunities for work and regreation—rules your eyesight—smokes your walls—mars decorations and increases household work. You could probably save a deflar tomerrow by going without your meals but it wouldn't be economy. It is not so much what you save, but how you save that counts.
