THE FRUIT CROP.

Some Ideas Worth Putting into Practice Next Season.

It is a mistake to suppose that fruit bearing plants will do their best if they receive attention only now and then. Irregular care will not amount to much. Moreover, the cultivator should, as soon as the bearing season is over, begin to consider what may be done to induce a better crop next year.

Many old plantations of raspberries and blackberries that are filled with dead canes and weeds can be so renewed and renovated that they will bear an abundance of fine fruit. To keep a berry patch in the highest state of productiveness the old canes should be removed after fruiting and the young growth of small canes properly pruned out and thinned in the row. If this is neglected next year you will have a small crop of inferior berries, good neither to eat nor to sell.

Blackberries and the red or darker varieties of raspberries require similar culture. In May begin to cultivate and

A Paying Investment.
Mr. John White, of 38 Highland Ave., Houlton, Maine, says: "Have been troubled with a cough every winter and spring. Last winter I tried many advertised remedies, but the cough continued until I bought a 50c. bottle of Dr. King's New Discovery; before that was half gone, the cough was all gone. This winter the same happy result has followed; a few doses once more banished the annual cough. I am now convinced that Dr. King's New Discovery is the best of all cough and lung remedies." Sold under guarantee at Belt & Cherrington drug store. 50c. and \$1.00. Trial bottle free.

der heads are covered with heavy wire, lath or narrow strips of any lumber handy. The receptacles to be washed first are placed in the cylinder and the box partly filled with water. The cylinder is then revolved by turning the crank. The mud will fall to the bottom of the box.

To clean the box the plug B is removed and water allowed to flow in until it runs clear.

A barrel may be used for the cylinder by boring it full of one inch holes. This device will allow the operator to wash and clean a large amount of vegetables in a short time and without having the hands in the cold water.

Prairie Hay Crop.

The prairie hay crop in the western two-thirds of Kansas promises to be heavier this year than for many years past. Prairie hay properly cured and taken care of has a feeding value greater than any other hay produced in this section except alfalfa or clover. Usually the grass is not cut as early as it should be. Prairie grass should be cut early to make the best feed. The first of August is none too early to begin haying. Prairie hay is also, as a rule, not as well stacked as it should be, and the percentage of loss on account of stacking is large. More prairie hay is fed to horses in the offices of the country than any other hay. Each year the value of bright, early cut hay is increasing. Poor prairie hay is of slow sale. This fact only serves to demonstrate that the feeding value of late cut and blackened prairie hay is not so great, and feeders will not pay as much money for it as for the bright hay. Hundreds of acres of Kansas land are set aside for the production of native prairie grass hay. To realize the greatest profits, either for feeding or through sales, it should be properly cared for.

Killing Sumac.

For killing out sumac a correspondent recommends a flock of sheep. First mow the sumac, then turn in the sheep. Sumac may be destroyed by persistent cutting after flowering season and before it sets berries, but sheep will do the work at less trouble and expense.

A Forcing Effect.

Fresh manure has a forcing effect and tends to produce stems and leaves at the expense of fruit and grain. It is therefore better for early garden truck, cereals and forage plants than for greens or fruit.

Keep It in the Bottle.

Bottled milk, being sealed with a cap, cannot absorb odors and should be left in the bottle until used, not emptied into an open dish.

When Trifles Become Troubles

If any person suspects that their kidneys are deranged they should take Foley's Kidney Remedy at once and not risk having Bright's disease or diabetes. Delay gives the disease a stronger foothold and you should not delay taking Foley's Kidney Remedy. Stafrin Drug Co.; M. L. Thompson, Falls City.

Within a month over 15,000 acres of land have been sold between Heppner and Wasco at an average of \$20 an acre. One tract of 2,040 acres sold for \$41,150.

Passed Examination Successfully

James Donahue, New Britain, Conn., writes: "I tried several kidney remedies, and was treated by our best physicians for diabetes, but did not improve until I took Foley's Kidney Remedy. After the second bottle I showed improvement, and five bottles cured me completely. I have since passed a rigid examination for life insurance." Foley's Kidney Remedy cures backache and all forms of kidney and bladder trouble. Stafrin Drug Co.; M. L. Thompson, Falls City.

The Amity condensed milk factory is already a success, and is doing good to many people.

How to get Strong.

P. J. Daly, of 1247 W. Congress St., Chicago, tells of a way to become strong: He says: "My mother, who is old and was very feeble, is deriving so much benefit from Electric Bitters, that I feel it my duty to tell those who need a tonic and strengthening medicine about it. In my mother's case a marked gain in flesh has resulted, insomnia has been overcome, and she is steadily growing stronger." Electric Bitters quickly remedy stomach, liver and kidney complaints. A TREACHEROUS TROUBLE

If You Suffer from Headaches and Dizzy Spells Do Not Mistake The Cause.

"The headaches and dizzy feelings that trouble so many persons, are often but symptoms of kidney complaint. Nature gives early warnings of every disease, if you would but note and heed them. Backache, twinges of pain when stooping or lifting, headaches, faint spells and urinary disorders are among the first warnings of kidney trouble. If these signals are heeded, there comes a steady, dull heavy aching in the back and loins, a noticeable weakness and loss of flesh, rheumatic attacks, weakening of the sight, irregular heart action, languor, attacks of gravel, irregular passages of the kidney secretions, sediment, painful, scalding sensation, druggish, bloating, etc. But there is no need to suffer long. Dean's Kidney Pills cure all kidney troubles. This remedy has made a reputation for quick relief and lasting cures.

Home proof is convincing evidence of the efficiency of Dean's Kidney Pills. Call at Belt & Cherrington's drug store and ask to see statements of Dallas people who have used this remedy.

LABOR SAVING DEVICES.

Machines That Simplify Two Common Forms of Farm Work.

A portable hay stacker or derrick for stacking hay in the field, such as shown in the illustration herewith, will be found not only very handy, but easy to construct, and it will do the work in as satisfactory a manner as

AN EXPENSIVE STACKER.

One of the most expensive hay stackers. The mast and the two side braces are 4 by 4 inches square. The sill may be the same, but will be better if made of a 4 by 6 inch stick. The bolt A holds the guide or sheave wheel in place, as shown at B. The two bolts C hold the mast in place and are removed when moving the derrick. However, if same is only moved a short distance it will not be necessary to remove the mast. Simply hitch a horse to the sill and drag the entire derrick where wanted. D is the switch block for lower end of hoisting rope and E the eyebolt, to which the block D is made fast with a short rope. A sling may be passed around the sill in place of the eyebolt E if necessary.

The sill should be from fourteen to sixteen feet long and the mast and two side braces from sixteen to twenty feet long. By boring several holes in the mast the same may be raised or lowered and made the proper height for both small and large stacks. The derrick should set at an angle of about forty-five degrees, leaning toward the stack, and have two guy wires or ropes at the rear and one in front.

The second illustration shows how a vegetable washer may be constructed. It will not only save much work on the farm, but will greatly assist in placing the vegetables on the market in better shape. The cut is really self-explaining. The size of the device will depend on the amount of vegetables to be washed. A box being built, the cylinder is made by cutting two boards from one or two inch lumber. These are made fast to the shaft and placed in the box, as shown, an opening being made in which the vegetables are passed in, as shown at A, which is held in place with hooks and eyes.

The end of the shaft is bent to form
