In the middle of a glass partition for the sake of controlling the temperature. "In one compartment I raise tomatoes and string beans along with roses and other flowers requiring a warm house. The second compartment is almost exclusively devoted to vegetables, though I usually try to have a few carnations on hand for the sake of their blossoms and perfume. "Almost every variety of vegetable that grows in our gardens may be successfully raised in the hothouse excepting green corn, peppers, eggplant and such subtropical plants. When it comes to money returns, tomatoes and lettuce are in greatest demand during the cold months and fetch almost any price that you choose to ask. "Last winter I sold a dozen tomatoes for a dozen dollars. They were nice, smooth fellows of a beautiful color, but not large. They were bought by a family whose country home is near mine and who were giving a luncheon, and fresh tomatoes were about the nicest and most expensive salad to be had. "That was during the first week in December, and those tomato plants had already been bearing a month. Properly managed tomato plants can safely be depended on to bear from November to June. "The plants should be put on the benches in the greenhouse in rather poor soil, as blossoms set much sooner in it than in rich earth. When the first crop is well on, manure should be added and the application continued all the winter and spring to induce new growth with fresh blossoms and fruit. "During the first two months it is necessary to fertilize the blossoms by applying the pollen with a camel's hair brush. When the plants get older it

THE HOME GREENHOUSE.

Easy to Have Fresh Vegetables in Winter.

"The old idea that only the extremely rich can afford to have fresh vegetables during the winter months is a mistake," declared a woman who has supplied her family with fresh vegetables for the last four winters and has sold enough besides to pay all the expenses of heating and working her greenhouse. "With only an ordinary

greenhouse and the same amount of care that is given geraniums, palms and other house plants an abundant supply of fresh vegetables can be had all the winter long. "I have a three-quarter span greenhouse eighteen feet long. It is divided

is only necessary for the vines every day or so, and the pollen will spread sufficiently. "When the vines grow too freely I prune them thoroughly. In some instances I prefer the one stem system of pruning, tying to an upright wire. The temperature of my tomato house is between 60 and 75 degrees. "Unless a person has tasted the string beans grown under glass he really does not know how delicious a common vegetable can be. I have found the Early Warwick the most desirable variety for growing in the greenhouse. It is extremely easy to grow, does not require a very rich soil and keeps the spruce a short time, usually from six to eight weeks. "The cooler half of my greenhouse the temperature ranges from 50 to 65 degrees. Lettuce, cauliflower and radishes are the three vegetables which are to be had there every day throughout the winter."

FALL PLOWING.

Facilitates Work in the Spring and Improves Seed Bed.

While little definite investigation has been carried on to determine the relative value of spring and fall plowing, yet the practice on many of our western ranches is to get as much as possible of the land to be seeded in the spring plowed during the fall. This foresight is considered especially essential in breaking new ground. Of course in the arid region of the country it is difficult to plow in the fall, and some farmers leave the work until spring in order that the land may be plowed much more easily after the snows and spring rains. One advantage in fall plowing is that it opens up the soil and admits the moisture from the fall and spring rains and winter snows more easily. In some cases, however, quite as good results are gained from leaving the stubble on the ground throughout the winter. A long stubble tends to prevent the snow from blowing and accumulates considerable moisture in the soil. Our spud and beet fields are dug up so much that they do not need autumn plowing, and such fields are always in the best tith in the spring.

One distinct advantage in fall plowing is that it facilitates work in the spring and tends to better preparation of the seed bed at that time. If large areas must be plowed in the spring the work is crowded by and not enough attention is given by way of preparing frequently it is quite late before farming operations can begin. It is therefore a decided advantage to have the ground plowed in the fall in order that it may be worked up rapidly in the spring with the disks and harrows. Another advantage for fall plowing is that it affords a good means of disposing of the manure. As soon as the spring is out and when it is standing in shock manure may be distributed over the field and as soon as the thrashing is done can be plowed under. The precipitation of the succeeding months beats down the soil and so tends to bring about decomposition in the manure. If the manure is left and plowed under in the spring it becomes with the rise of moisture later. The observations in many sections indicate that the very best way to dispose of manure is to get it on the ground and plow it down in the fall. Our modern traction plows and the introduction of the disk plow have done much to simplify fall and winter plowing in this country. It frequently occurs that we have a good rain or a snowstorm, after which the plowing can be done quite readily.

The Waugh Plum. For many years the curculio and various other pests made the culture of the plum practically unprofitable in America. Of late years, however, the insects destructive to this admirable fruit have become less plentiful, and now there have been introduced so many kinds that are proof against the ravages of the plague that the plum is fast resuming its original importance as a garden and orchard fruit. Plum culture has already reached a high stage of development on the Pacific coast, and since the new varieties from Japan meet their approval the number of growers all over the country has increased greatly. The modern plum is a great improvement over the old fashioned fruit of a half century ago. Some of the hybrids recently brought to public notice by American growers bid fair to become prime favorites. Among the most promising of these is the Waugh, a plum which has stood the test remarkably well and is in every respect a desirable acquisition.

A CLUSTER OF WAUGH PLUMS.

THE GUINEA IN DISGUISE. When on a trip to grandpa's farm you're always sure to meet The guinea with his hawk alarm—"Buckwheat! Buckwheat! Buckwheat!" If you should unto New York go You almost die of fright. When that same guinea whistles low: "Bob White! Bob White! Bob White!" But down at Philadelphia, too, He sounds the pheasant's drum; He scarce the daylight out of you With his "Trum! Tr-r-rum! Trum!" Now, at Atlantic by the sea He's tonton canvasback. Just fills your gizzard up with glee "To hear him 'Quack! Quack! Quack!'" O guinea, guinea, sakes alive, You used to cost but nil! But now you cost from two to five By changing your outfit. At home you dressed in polka dots, But now, full dressed in town, You're frilled in parsley and pink knots And sport a fine abateh gown. Killing Sumac. For killing out sumac a correspondent recommends a flock of sheep. First now the sumac, then turn in the sheep. Sumac may be destroyed by persistent cutting after flowering season and before it sets berries, but sheep will do the work at less trouble and expense.

BACKACHE IS KIDNEY ACHE
To Eliminate the Effect, You Must Remove The Cause.

Pain is nature's signal of distress, a warning that must not be ignored. Those sharp twinges in the back, those stab-like pains that follow any sudden twist or turn, are simple signs of hidden dangers in the kidneys. No trouble starts more easily, gains ground more rapidly, nor proves more often fatal than any disorder of the kidneys. All the outward appearances of health may remain until a terrible disease has taken root. Don't wait. The moment you feel any uneasiness, lameness or pain in the back, the moment the urine shows irregularity, either in its appearance, or in the quantity or number of the passages, begin with Doan's Kidney Pills. This remedy has been curing kidney troubles for seventy-five years, and never yet has failed to give relief if taken in time. It cures the kidneys, and thus cures backache, lame back, headache, dizzy nervousness, languor, scintation and all other symptoms of kidney troubles. Home proof is convincing evidence of the efficiency of Doan's Kidney Pills. Call at Belt & Cherrington's drug store and ask to see statements of Dallas people who have used this remedy. For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States. Remember the name—Doan's—and no other.
