

Pests and Gardens

Control of Caterpillars
 The caterpillars which are the most common pests of the garden are the cabbageworm, the turnip root miner, the tomato worm, and the cutworm. These caterpillars are all members of the same family, the Tortricidae, and they all feed on the same kind of food, the leaves of the plants. They are all very voracious and they can do a great deal of damage in a very short time. It is therefore important to take prompt action when they are first seen.

Control of Beetles
 The most common beetles which are pests of the garden are the Colorado potato beetle, the cucumber beetle, and the bean beetle.
