

Farm and Garden

A MACHINE THAT SAVES.

Manure Spreader is a Conservator of the Farmer's Time and Money. Any machine that saves time or bank account in a commercial house or bank. Any business man will listen to a proposition to buy an appliance that saves time, as time is money, because help costs money. If the machine makes work lighter, does it better than the old way, there is a double argument for owning it. The manure spreader does for the farmer what the letterpress accomplishes for the merchant, and still it is not properly appreciated, says the American Cultivator. A little gunpoint is required to learn to operate one, and many who own spreaders have not given sufficient attention to acquiring the knack of running them so that they are well liked and used as much as should be the case. Most persons have never considered the saving made by this machine. It will distribute a load of manure, coarse or fine, in three to five minutes. Where are the two men who

LOADING A MANURE SPREADER.

can do this? In many instances it can be set where the stables may be cleaned directly into it, thus saving one handling of the heavy, disagreeable stuff and the time required. Under these conditions the daily spreading and closer conservation of this valuable manure made a habit, which in itself is an inestimable acquisition. The saving in manure values is estimated at fully one-third the total amount made where drops and absorbents are employed, as they should be on every farm. This amounts to at least \$5 per cow per year. All other farm machines are used only four to six weeks in a year, while the spreader is paying for itself the year round. The boy who is not strong enough to spread manure in the old way may easily put on the horses and by the use of the machine do this heavy work before going to school in the morning, and he can do it better than the strongest man with a fork. Then there is the advantage of having the fertilizer spread fine as well as evenly. The farmer who doesn't own and use a manure spreader is behind the times and is in a losing race.

"The Fool and His Pipe."

The surest test of stupidity of the think tank is to see a man light a cornucopium pipe in the haymow. This indicates a brain expansion that would make a bullock shed tears. Many a man has had a bright red barn with twelve foot posts laid low in the dust because some fathead with the intellectual reach of a flank steak mistook the haymow for a buffet diner. The man who retreats to the classic confines of a box stall to experiment with "the makins" ought to be cured of the tobacco habit by being kicked in the epiglottis by a blind mule—Kimball's Dairy Farmer.

Loosening a Tight Nut.

When a wagon wheel nut has become so tight that it does not yield readily to the wrench, center a stream of hot water on the nut from the spout of a teakettle. In a few minutes the nut can be turned off with the fingers, says Farm Journal.

HUMS FROM THE HIVE.

Every beekeeper needs one or more books on bee culture. Look well after your bees and don't let them swarm if you expect to get the most out of them. Don't wait until your bees get to swarming to order hives. It's better to keep them from swarming. Hives should always stand level side when comb building is being done so the combs will come down even with the bottom bar of the frame. Bees like to work better probably than any other living thing. There is room for a few liters of bees on every farm. Fruit, poultry and bees make a splendid combination. Every beginner should paste a label on the front of each stand, wholly for his own benefit. Nothing will "leave this hive alone." Nothing will more disturb a swarm of bees and interfere with the economy of the hive than to be constantly opening it and lifting out the frames. A smoker lying on its side will not consume as much fuel as when standing upright. Therefore when you do not expect to use it for several minutes lay it down. If the wind is blowing from the rear, it will save fuel and the time necessary to replenish it by laying it down and placing a box or hive body and cover over it.

BEAN CULTURE.

Instructions For Growing of Vegetable For Use During Green State. These cultural instructions pertain to the growing of beans for use during the green state or for snap shaws, as it is generally known, says the Iowa Homestead. It is an old saying that land which will not grow any other crop may be planted to beans. However, this is a great mistake, for in order to grow a good crop of beans the soil must be fairly rich or you will have a poor crop. Beans will come into bearing earlier on light, sandy soil, but larger crops and pods of better quality can be grown on heavier soils, only they will be a little later in coming into bearing. This point should be given consideration when planting for market, as the early crops always bring the best prices. Beans are very tender and should not be planted until the ground has warmed up. The seed may decay in the ground. Planting should be done about the time corn is planted or a little later for snap crop. Plant in rows eighteen inches apart.

CULTIVATION OF THE PLUM.

Spring the Best Time For Planting Plum. Discussing the cultivation and propagation of the plum, a bulletin of the Iowa State college says: The plum may be propagated either by budding or by root grafting. In general practice the former is the more successful, the work being done at the close of the active growing period, which is usually the fore part of August. In top grafting the plum it is

GOLDEN PLUM. [From bulletin Iowa State college.]

important that the stock and the scion belong to the same or a closely related species. If this is not the case the union is apt to be unsatisfactory and the tree becomes poorly developed and is short lived. For the American varieties stocks of the native species should be used. Miner is highly recommended as a stock for the American plums by some of our Iowa growers.

Under average conditions spring is the best time for planting plum trees. In exceptional seasons, with a favorable moisture supply, fall planting may be done with success, provided the work is done early, so that the trees may become re-established before winter sets in. Often, however, the moisture supply in the fall is an uncertain quantity, and if the ground is at all dry the tree which has been recently disturbed is likely to suffer severely during the winter.

Right Way to Grow Sweet Corn.

Shallow cultivation of sweet corn should be practiced to preserve the soil moisture. It is well known that corn requires a large amount of water in its growth and is likely to suffer from drought. The Maine experiment station publishes the following recipe for the dry lands which it has tested and found excellent as a poultry feed: Two hundred pounds good, wheat bran, 100 pounds cornmeal, 100 pounds middlings (or Red Dog food), 100 pounds gluten meal or brewer's grains, 100 pounds linseed meal and 100 pounds feed scraps. This should be thoroughly mixed on a clean floor before being put in the feed hoppers. The scratch mixture consists of four quarts of screened cracked corn, two quarts of wheat and two quarts of oats for each hundred lbs. (Plymouth Rock daily).

Dehorn in Cool Weather.

If the animals are dehorned in warm weather it is well to apply some pine tar with a view to keeping flies from the wound. Some operators do this in nearly all cases, thinking that it facilitates healing. The dehorning operation should always be performed in cool weather and upon animals which have at least attained the age of two years.

Where there are no trees in the pasture which will furnish ample shade for the stock during the heated months of the summer some kind of shelter should be provided, if nothing more than a shed made of poles and thatch.

Where there are no trees in the pasture which will furnish ample shade for the stock during the heated months of the summer some kind of shelter should be provided, if nothing more than a shed made of poles and thatch. A number of instances were reported during July of last year where many head of cattle died from the heat, being found piled up in a seeming attempt to gain the shelter of a little patch of shade.

Quite accurately the spread of the root system of shrub or tree is indicated by its visible spread of branches.

Quite accurately the spread of the root system of shrub or tree is indicated by its visible spread of branches. This should be of aid in pruning roots and branches at the time of transplanting and also in the cultivation and care of trees after they are set, including the growing of tilted crops in orchard tracts.

Summons.

In the Circuit Court of the State of Oregon for Polk County, Department No. 1. A. L. Sperring and C. L. Sperring, Plaintiffs, vs. Luther Williams, and Kate G. Williams, Defendants. The said defendants do hereby severally and jointly answer the within summons, and they further notify the said plaintiffs that they will appear in court for the relief therein demanded, to-wit: \$1000.00, on the 24th day of August, 1916, at 10 o'clock a. m. in the Court House at Dallas, Oregon. Commencing at the Northwest corner of the Thomas L. Burbank D. L. Co. in T. P. S. R. 4 West of the Will. Mer. in T. P. S. R. 4 West of the Will. Mer. 14 chains; thence North 21.50 chains; thence East 58.20 chains; thence South 17.40 chains; thence West 17.40 chains; thence North 21.50 chains to the place of beginning, containing 197.88 acres, more or less, containing 80 feet of the Southeast corner of the above described tract of land; thence East 19.75 feet to the place of beginning; thence North 21.50 chains; thence East 58.20 chains; thence South 17.40 chains; thence West 17.40 chains to the place of beginning, containing 1.13 acres, more or less. And that said defendants do hereby severally and jointly answer the within summons, and they further notify the said plaintiffs that they will appear in court for the relief therein demanded, to-wit: \$1000.00, on the 24th day of August, 1916, at 10 o'clock a. m. in the Court House at Dallas, Oregon. Commencing at the Northwest corner of the Thomas L. Burbank D. L. Co. in T. P. S. R. 4 West of the Will. Mer. in T. P. S. R. 4 West of the Will. Mer. 14 chains; thence North 21.50 chains; thence East 58.20 chains; thence South 17.40 chains; thence West 17.40 chains to the place of beginning, containing 197.88 acres, more or less, containing 80 feet of the Southeast corner of the above described tract of land; thence East 19.75 feet to the place of beginning; thence North 21.50 chains; thence East 58.20 chains; thence South 17.40 chains; thence West 17.40 chains to the place of beginning, containing 1.13 acres, more or less. And that said defendants do hereby severally and jointly answer the within summons, and they further notify the said plaintiffs that they will appear in court for the relief therein demanded, to-wit: \$1000.00, on the 24th day of August, 1916, at 10 o'clock a. m. in the Court House at Dallas, Oregon.

USEFUL SUMMER SPRAY.

Effective at Same Time Against Plant Diseases and Injurious Insects. Fruit growers are desirous of using a spray that will be effective against both plant diseases and injurious insects so that all can be dealt with at the same time. The department of entomology of the University of Kansas, therefore, recommends the following: One, six pounds; sulphur, four pounds for 100 gallons of water for 100 gallons of water. Strain, mix in a barrel of water and add two pounds of arsenate of lead.

BEE FEEDER. [From the American Agriculturist.]

When extensive feeding becomes necessary in a colony the device here shown will be found very useful. It consists of a paraffin coat-

ed box with a perforated wooden float almost as large as the inside of the box in a snapper. For convenience in handling the feeder should be about two inches shorter in front, one-half inch at the back and three-quarters inch at each side than the super's inside measurements, and the front should be partly cut away. To use the feeder, the mixture to be fed should be poured into the chamber with, say, twenty or twenty-five pounds of syrup in the feeder. This amount will be taken up by a strong colony in about two days. It is essential that paraffin be used freely around the creek to prevent leaking. -American Agriculturist.

Fertilizers For Watermelons.

Where stable manure is not available for watermelon growing the Georgia experiment station recommends the following mixture of commercial fertilizer: Nitrate of soda, 400 pounds; high grade acid phosphate, 800 pounds; quartzite or sulphate of potash, 200 pounds. This should be mixed and applied at the rate of 700 pounds and upward per acre. For later melons a mixture of 800 pounds of cottonseed meal, 800 pounds of high grade acid phosphate and 800 pounds of kainit per acre may be used.

Protecting Seed Corn From Crows.

Seed corn should be protected from crows by a peck of shell-corn, mixing it well. It is a very cheap and easy way, and the seed is more agreeable to handle than when coated with tar after the more common method.

Dehorn in Cool Weather.

If the animals are dehorned in warm weather it is well to apply some pine tar with a view to keeping flies from the wound. Some operators do this in nearly all cases, thinking that it facilitates healing. The dehorning operation should always be performed in cool weather and upon animals which have at least attained the age of two years.

Where there are no trees in the pasture which will furnish ample shade for the stock during the heated months of the summer some kind of shelter should be provided, if nothing more than a shed made of poles and thatch.

Administrator's Final Notice.

In the County Court of the State of Oregon for Polk County. In the matter of the estate of Thomas H. Denny, deceased. Notice is hereby given to all whom it may concern that I, Ziba Denny, the executor of the above named estate, as above named administrator, has filed his final account in said court, and the same has been allowed by the court on the 25th day of July, 1916, at the hour of 1 o'clock P. M. at the court house in Dallas, Polk County, Oregon, as the time and place for hearing said final account and any objections thereto, and directing that the notice thereof be published in the Polk County Observer, published at Dallas, Polk County, Oregon, for four consecutive weeks successive weeks prior to said date.

A Few Short Weeks.

Mr. J. S. Bartel, Edwardsville, Ill., writes: "A few months ago my kidneys became congested. I had severe backache and pain across the kidneys and hips. Foley Kidney Pills promptly cured my backache and my kidneys were cured by Foley Kidney Pills. I was loaded with as little shaking as possible and moved away, being suited at the rate of three pounds per ton as unloaded. I can heartily recommend them." For sale by Conrad Stafrin.

The animal husbandry department of the Pennsylvania Agricultural college reports the case of a creamery manager who refused a graduate of the state dairy school a ten dollar month advance in wages, hired a man at the lower figure, and on the 49,000 pounds of butter made during the ensuing months lost \$800 as a result of a slump in the market from 15 to 13 per cent.

The animal husbandry department of the Pennsylvania Agricultural college reports the case of a creamery manager who refused a graduate of the state dairy school a ten dollar month advance in wages, hired a man at the lower figure, and on the 49,000 pounds of butter made during the ensuing months lost \$800 as a result of a slump in the market from 15 to 13 per cent. The main disadvantages of the system are that it often furnishes an easy excuse for turning the orchard lot into a pasture, that it consumes moisture and fertility that the trees sorely need, while it reduces the size of the fruit from a third to a half of its normal size. It is a method which should be abandoned.

"Is Life Worth Saving?"

Mrs. Mollie McManey, Prentiss, Miss., writes that she had a severe case of kidney and bladder trouble, and that four bottles of Foley's Kidney Pills cured her sound and well. She closes her letter by saying: "I heartily recommend Foley's Kidney Pills to any sufferer of kidney disease. It saved my life." For sale by Conrad Stafrin.

Company to establish a new bath house in Newport is being formed.

Hay Fever and Asthma.

Bring discomfort and misery to many people but Foley's Honey and Tar gives ease and comfort to the suffering ones. It relieves the congestion in the head and throat and is soothing and healing. None genuine but Foley's Honey and Tar in the yellow package. For sale by Conrad Stafrin.

Must be Above Suspicion.

Kidney and bladder ailments are so serious in their consequences and so often unchecked so often fatal that any remedy offered for their cure must be above suspicion. Foley Kidney Pills contain no harmful drugs, and have successfully stood a long and thorough test. For sale by Conrad Stafrin.

On Ontario two concrete machines are busy all the time, making material for laying walks, floors, foundations, etc.

"Foley Kidney Pills Have Cured Me."

The above is a quotation from a letter written by H. M. Winkler, of Evansville, Ind. "I contracted a severe case of kidney trouble. My back gave out and I was unable to get on my feet. I took Foley Kidney Pills regularly and am now perfectly well and feel like a new man. Foley Kidney Pills have cured me." For sale by Conrad Stafrin.

Relief comes quickly—comes to stay.

Doan's Kidney Pills cure kidney ills. Prove it by your neighbor's case. Here's Dallas testimony. The story of a permanent cure. Mrs. John P. Byers, Oak Street, Dallas, Ore., says: "The public statement I gave in praise of Doan's Kidney Pills in 1907 still holds good. Although I never used this remedy myself, I know that it can be depended upon to bring relief from kidney trouble. One of my relatives has used Doan's Kidney Pills with great benefit."

Work 24 Hours a Day.

The busiest little things ever made are Dr. King's New Life Pills. Every pill is a sugar-coated globe of health, languor into energy, brain-ache into mental power; curing Constipation, Headache, Chills, Dyspepsia, Malaria, etc. at all druggists.

Another stamp mill will be in operation in the Bohemia district within 20 days.

Beware of Outlets for Catarrh that Contain Mercury.

As mercury will surely destroy the sense of smell and completely derange the whole system when entering it through the mucous surfaces. Such articles should never be used except on prescriptions from reputable physicians, as the damage they will do is ten fold to the good you can possibly derive from them. Hall's Catarrh Cure, manufactured by F. J. Cheney & Co., Toledo, O., contains no mercury, and is taken internally, acting directly upon the blood and mucous surfaces of the system. In buying Hall's Catarrh Cure be sure you get the genuine. It is taken internally and made in Toledo, Ohio, by F. J. Cheney & Co. Testimonials free. Sold by druggists. Price, 75c per bottle.

CRESCENT BAKING POWDER. RAISES THE DOUGH AND COMPLEXES WITH ALL PURE FOOD LAWS.

After testing several methods of making clover hay Professor Roberts of the Cornell N. Y. experiment station recommends the following procedure as most satisfactory: Do not cut clover when moderately ripe and only during those hours of the day when the dew is off. The hay cut and left until the following day and while hot is put in small bunches and left until the next morning, when they are turned lightly and carefully with a pitchfork, and so on until the rate of three pounds per ton as unloaded.
