Kindness is the only means that it is worth while using to get even with another. It is all right to use this "on the other fellow, and do it first."

If forest fires are threatening in north, central and eastern states in May, what may we look for in late August and September if we should have a dry summer?

The secretary of the Kansas state to the solution of the omnipresent fly problem when he declares that flies can be kept away from kitchens and barns by painting them blue and by growing hops around the doors.

The toad has little to commend li in the way of looks, but in its quiet. sluggish way it renders a service to the tiller of the soil in the destruction of burs, worms and insects that can hardly be measured. The small boy should be told of its usefulness and taught to protect rather than harm it.

Life is all too short to spend very much time wearing a fellow's patience and religion out fooling around with a and defraud have been run to earth kicking cow or a balky horse. The and in many cases have not only had cow will fulfill her mission on the to pay heavy fines, but many of them block in the butcher's shop, and as for the horse-well, sell him for just what Let the good work go on, for there are he is to some one else who enjoys sub still others who should be chased into duing brute orneriness.

That a cow is better for a rest between her milking periods is ulcely an all around nuisance, but when teleshown in the case of the world's phone linemen lay wires in undermilk and butter record cow. Colantha ground conduits they come in handy IV.'s Joanna, she being dry a full year A light cord is fastened around a rat's prior to the interval in which she made neck, and it is released at the mouth her great record. The common cow of the conduit. Instinctively it runs giving an average yield of milk is the through to the other end. Here it is better for a couple of months' rest be caught and the end of the string setween her periods of lactation, and for cured. This is used to pull a wire the same reason as in the above in-through, and this in turn to pull

A reader of this department asks what to do to get rid of moles. Perhaps it would be well first to find out reaching effect upon the forest conser whether the offender is really doing vation problem and along the line of more harm than good, which is an giving definiteness to the heretofore open question. If the little chap is quite hazy relation existing as between plowing up the lawn in bad shape and national and state prerogatives was is not rendering a compensating serv ice in flower or vegetable garden be the United States a short time since. may be dispatched by buying and In brief it holds that the federal govsetting one of the mole traps for sale ernment without consent of the states at most any hardware store.

naturalist, recently shot in East Af- ject to state fencing laws. rica what is said to be the largest elepliant on record. The great beast stood eleven feet four luches at the tribute so large a measure of the skill one or two weeks earlier than in the shoulder, and the circumference of a of birds to instinct, the fact seems to case of soil affected by surface drains front foot was sixty-seven and a ba inches, while the two tusks weighed along the lines of nest building and the soil is made more porous, open and respectively 95 and 110 pounds. The foot of Jumbo, the famous circus ele- tative, learning the "how" by watch- ly than they do into surface drained phant, is said to have had a circum ference of but sixty-one inches.

A lady friend who is interested in bird life tells us that a flock of about a dozen bluejays visited the neighbor hood in which she lives the other day and played havoe with the nexts of a number of other valuable birds. Collectively and individually the titue ayare outlaws and pirates in the bi-c world, and their nests and eggs should be destroyed, particularly when found in the vicinity of other useful hirds like the robin, bunting and cathird. Added to this destructive trait which they possess, like the sparrow they render very meager service in the destruction of insect life.

Peanut butter is not only an a petizing food product, but very nutritious. and it is not difficult to make. The pennuts-ments-may be rousted in a moderate oven either before or after shelling, but in either case they should stirred quite frequently to insure even coasting. The skins should then be rubbed off. The means may be bank accounts if every county in the ground in an ordinary meat grinder corn belt had just such an organizausing the duest plate and should flon. be run through a second time if neces sary. If the butter is quite oily after grinding the only ingredient that need kind Ot is more frequently done in the not as only as desirable a little office not only that stocks on which the or peanut oil may be added.

to blossoms this spring we would suggest they make an experiment with them in the matter of summer pruning, which means the removal during gust of the limbs and newer growth outgrows the stock the top of the that would normally be removed durtion of fruit bads for the following year. Often trees grow so thriftfly and vigorously that they will produce atherk that tends to the production the state experiment station. of fruit buds.

The damp celtar may not be primarily due to too much shade about the bouse, but there is no getting around the fact that the situation is aggravated by such shade. The germ destroying sunshine and fresh air pught to euter the cellur windows during a part of every day.

Not a little pleasure and real satisfaction can be got out of placing a shallow dish on the lawn and supply ing it with fresh water every day or reso. The birds will discover it very ckly and will come to the dish to drink and baths, where their performances will pruse very interesting to the members of the household.

Another Helatric cow has establish-Contine Clothilde de Kei, a New York cow, that in seven days produced disease, the infection will be more discover a medicine that will kill the 666.1 pounds of milk, from which 37.2 quickly communicated to the trunk or germs that cause cancer and tubercu-

It is a first rate idea to keep disher door, for a dead fly looks a whole lot picer there than he does in a frying pan, in a glass of milk or a bowl of

The finest beverage that the good Lord ever made is also the cheapest-H₂O, otherwise known as plain water. snakes, soften his brain, deplete his bank account or curse his family.

Now and then a pig will get thin and stay in poor condition simply because of poor teeth. We have seen hogs of this type being fed on ear corn that picked up right away when the amount of corn or less was fed In the shape of meal.

it is usually greedy folk-those who want to get something for nothingthat most often fall prey to multitudinous skin games. That is, they get plucked by a class of sharks who are busy at the same game as they are. the only difference being that the sharks succeed and wax fut on it.

The fear that is sometimes felt by the one just installing a slio that enslinge not used within a year may spoil does not seem to be justified in view of the experience of the Wisconsin station, where ensilage has been board of health contributes his mite kept in excellent shape under proper conditions for a period of five or six

> Time was when it was thought out of the question to separate little chicks any distance from a clucking old ben. Today literally tens of thousands of downy little fellows but a few days old are shipped by express from meny ble poultry centers and given the kindly and louseless housing of a brooder on arriving at their destination.

Thanks to recent alertness and activity on the part of the postal authorities, a whole lot of grafters who have been using the malls to misrepresent are now doing time in federal prisons. the open.

From most points of view rats are through the cable containing many

> Notwithstanding the fact that we atbe pretty well established that both only. (6) Where stiff clays are found song they are in a large degree imiing older birds of the same breed with which they are usually mated and by hearing their songs. It has been noted along a similar line that little chicks that are hatched in an incubator and that are not with a ben at all will not do one-quarter of the scratching that those will that are hatched and brooded in the usual way and have an example of scratching set for them.

The farmers living in Sangamon county, Ill., have organized an association whose watchword or slogan is "200 bushels of corn per acre." This smacks just a bit of the high school graduating motto, "Hitch your wagon to a star," yet it has a deal in its favor. The country over the average vield of corn is thirty-five bushels per acre or less while there are isolated instances where as high as 160 bushels per acre have been grown. It is to do what lies in their power to better this thirty-five bushel yield. It would

In top working fruit trees of any be added will be a little sait. If it is case of apples it is well to remember grafting is done should be naturally vigorous and as hardy as possible, but If any of our readers have apple that its rate of growth should be as trees that rested last year and bore nearly as possible the same as the varlety with which it is top worked. A slow growing top on a more vigorous stock produces a tree that at best is anshapely and uncouth, but where the latter part of July and early Au- reverse is the case and the top far 's almost sure to split and break down ing the spring mouths. BENEFITS OF TILE DRAINAGE.

department of agriculture, has sum-

murized the benefits derived from tile

drainage in the following paragraph.

The reasons in favor of tiling given

are so pertinent and plain that they

might well be committed to mem-

ory by every farmer who has wet

acres that are fetching him in little or

no revenue: (1) In the land that is

properly tiled the surface soil is re-

most fertile parts being carried off

with every considerable rainfall. (2)

Any plant food in manure or other

fertilizer deposited upon the soil is

carried into it with the water as it

percolates downward from the sur-

face, and so becomes thoroughly in

corporated with the soil. (3) Rain-

water as it passes through the soil

solving and preparing crude soil mate-

rial for the nutrition of plants. (4)

The soil having been well prepared, it

is at all times during the growing sea-

plants, such growth not being hinder-

ed by stagnant water or saturation.

(5) The frost goes out earlier in the

spring, so that the planting season opens

friable and roots penetrate more deep-

soils. (7) The effects of drought are

diminished, as has been found by ex-

perience, owing to the enlarged and

deepened soil bed and to the more fa-

vorable condition of the surface for

preventing excessive evaporation of

moisture. (8) It aids in making new

soil out of the unprepared elements.

since it permits a freer entrance of air

and atmospheric heat, which disinte

grate soil material hitherto unavail-

able for the use of plants. (9) Stub-

born and refractory soils when drained

Time was when cows needed their horns for self protection, but under modern domestic conditions they are useless and often dangerous appendages. The best and easiest method of dehorning is by the application of some caustic potash to the germ of the horns when the calf is a few days old. After the born has got a good start the job must be done by saw or clip pers. Many a dalryman besitates to dehorn his cows because of the harmful effect he thinks it will have in re ducing their milk flow. However, this tained entire instead of the finest and is likely to be overestimated. A test made at the Kansas Agricultural college in a herd of twelve cows with a view to determining the shrinkage as a result of deborning showed that in the five days prior to the operation it rave 1.142.5 pounds of milk, while in the five days following it gave 1.100.7 pounds, or a total shrinkage for the twelve cows of 40.8 pounds. This serves a most useful purpose by dis- amounts to sixty-nine one-hundredths of a pound of milk per cow each day. or about half a pint. On the fifth day after dehorning all except two of the cows were giving as much milk, and fore their horns were removed.

> An Avrshire cow, Netherall Brownie IX., owned by J. W. Clise of Seattle, Ladies' World Wash., has lately completed a year's test in which she surpassed the record previously held by any cow of this excellent breed. She gave 18,110 pounds of butter fat, equivalent to 958 pounds of butter. While this does not establish a world's record for cows Woman's Home Companion....\$1.50 of any breed, it is a performance that Pacific Monthly 1.50 Ayrshire breeders of the country are much pleased with.
