FARM ORCHARD AND GARDEN
BY **FETRIGG**
CENTRAL POINT, ROGUE RIVER VALLEY, OREGON
CORRESPONDENCE SOLICITED

[This matter must not be reprinted without special permission.]

Officials of the Canadian department of agriculture put the damage to sacked wheat in the western provinces at \$2,000,000 annually.

Some one has found out that eating popcorn during the entire journey will prevent car sickness. Incidentally it will please the "newsie."

Missouri does not excel in some lines of production, but she holds the banner for the biggest mules and corn-cobs produced in the country.

If one is located in a section where broom corn does well it is a paying crop, the price per ton of good quality product being about \$240 per ton.

Anaheim, Cal. is the center of an extensive celery raising district, from which 1,000 cars of the vegetable will be shipped during the present season.

New Zealand has twenty-four sheep for each inhabitant. Farmers of the United States would be better off than they are today if, as a country, we could make as good showing.

Sand and gravel are usually viewed as sort of plebeian stuff in nature's economy and the business world, but it took \$21,037,630 in 1910 to buy what was used in building and other purposes.

The Danes are the greatest butter-makers of continental Europe, and in the United States buttermakers of this same nationality take most of the prizes for the manufacture of gilt edged butter.

A law has been recently passed by the Florida legislature prohibiting the shipment out of the state of green or unripe oranges. The law was passed primarily in the interest of the grower, but will benefit the consumer also.

During the winter months, when severe colds are frequent, it is well to have handy a bottle of turpentine, camphor and sweet oil mixed to rub on to the neck and chest when a severe cold is contracted. Often such an application made before a doctor can be summoned will head off many a severe cold and possibly pneumonia.

The pruning of the sugar orchard maple may be done any time from the middle of July up to the 1st of December, but if done in the other months of the year the trees will suffer much from loss of sap. The worst time in all the year to do the job is in the latter part of February, just before the sap starts or while it is flowing heavily.

A chap down in Florida is out after snickers with a vengeance, claiming to send to any inquirer the secret of controlling sex in farm animals in return for a money order or draft for \$2. The greatest medical experts and anatomists have been and are today absolutely in the dark in regard to the influences which determine sex, one secret nature has withheld from the prying human intelligence.

The husking records have gone glimmering again, Bert Van Houten of Fremont county, Ia., excelling all previous records about ten days ago by husking 254 bushels and 50 pounds in ten hours. In a contest some two weeks prior to this performance he was defeated in a competitive husking contest in which he husked 230 and his rival 231 bushels. The new record also surpasses by three bushels the record made by Claude Wilson of Silver City, Ia.

Among the most striking figures which have been compiled in connection with the products exported during the past ten years are those having to do with live stock and meat. Statistics show that in 1901 there were exported from the United States 799,000 head of farm animals and 1,289,000,000 pounds of beef and pork. In 1910 the export of the meat animals had fallen to 188,000 head, while the exports of beef and pork were but 370,000,000 pounds.

The gospel of a better agriculture has been thoroughly preached in Ohio during the past year. Thirteen special trains, equipped with demonstration paraphernalia and lecturers, have made trips over the lending railroads. The campaign resulted in forty-eight days of instruction being given in practically every county in the state, while 3,300 miles were traveled by the special trains. Instruction of the most practical kind was given in soil fertility, selection of seed corn, wheat and sugar beet culture, poultry keeping, hog raising and horticulture. It is estimated that the lectures were heard by 40,000 people.

New York's Enthusiastic Welcome to Cardinal Farley

Copyright by American Press Association, 1912.

THE reception accorded to Cardinal Farley on his return to New York after his elevation to membership in the sacred college at Rome was unprecedented in the history of the Roman Catholic church in America, and its only parallels in recent times were the popular outbursts of enthusiasm at the homecomings of Dewey and Roosevelt. It was estimated that nearly half a million people lined the route by which he passed from the ship to the cathedral. The religious enthusiasm of the vast crowd was evidenced by the breaking of the police lines by men and women bent upon kissing the cardinal's hand, while more than one richly dressed woman was seen kneeling in the street to receive the apostolic benediction. Fifth avenue and other streets were decorated with flags, and 40,000 electric lights blazed on St. Patrick's cathedral on the night of the cardinal's return and for nine nights thereafter. Our photograph shows the cardinal in the full costume of his rank as a prince of the church.

BOOTS AND DOCTOR BILLS.
There never was a man with so strong a constitution but continued disregard of the laws of health would undermine and destroy it. We have in mind just such a case which came to our notice the other day. The young fellow in question for years took no pains to guard himself from exposure, thinking nothing of wading into the river in the spring of the year when repairing fences or of exposing himself in sleet or rain storms without putting on dry clothing afterward. He thought he could keep this up, and it seemed as if he could. But today he has symptoms of tuberculosis and is making regular visits to a doctor. It is to be hoped the disease can be headed off, but if not it can only be viewed as the direct result of carelessness. The outdoor life on the farm is most favorable to physical health, but perhaps in no other occupation is there greater exposure when one is overheated, and great care should therefore be exercised. Water tight footwear and rubber coats cost quite a bit, but they are a good deal cheaper than doctor bills.

OUR OWN POTASH.
Some capitalists over in Germany, aided and comforted by the imperial government, sought to monopolize and set their own price on phosphate shipped to the United States. With this situation as an incentive the department of agriculture has been making some investigation, and, while the preliminary work is not yet finished, enough facts have been gathered to make clear that we have vast deposits of phosphate in our own country, more than enough to supply our needs for generations to come. Florida, Kentucky, Tennessee and Idaho are states in which deposits are located. In this case, as in many another, necessity is the mother of invention or discovery.

A CONDITION—NOT A THEORY.
Tillers of the soil and especially those interested in the production of wheat would do well to realize the meaning of the figures showing exports of wheat for the past few years. Figures compiled show that ten years ago the exports of wheat from the United States were sufficient to feed 36,000,000 people, while last year the amount of wheat exported was barely enough to feed 11,000,000 people. At this rate the balance of trade in wheat will be against us in a half dozen years. Two things are responsible for this decrease in exports—an increase in our population, but, far more than this, a rapid decrease in the productive capacity of wheat producing lands.

AN IMPROVEMENT ON SERUM TREATMENT.
A Missouri farmer, H. R. Rust, who lives near Hardin, has discovered what he contends is an important fact in connection with the serum treatment of hogs for cholera. In addition to the use of the serum, which is being furnished at cost by a number of state experiment stations, he states that at the same time the serum is injected an injection should also be made of blood from a hog affected with the disease at the time it was drawn. He contends that if the serum is used alone it renders a hog immune but for a limited time, while if an injection of blood is also made the hog contracts the cholera at once and the serum injected at the same time counteracts it, with the result that the animal is rendered cholera proof for the rest of its life. Mr. Rust has a farm of 1,500 acres and within the past year claims to have given 10,000 hogs this double or simultaneous treatment and that his losses from the disease have not been more than 3 per cent.

CARE OF THE BROOD SOW.
Most of the trouble that sows have at farrowing time is due to their not receiving the right kind of ration during the weeks preceding the birth of their pigs. The difficulty does not seem to be due to any intention on the part of the owner to scrimp the ration, but rather to feeding a ration that is not well balanced. Corn is a titbit ration to give to a sows or hog that is being fattened for market, but it should form a very small part of the ration for the brood sow. What she needs rather are feeds that will give her bone and muscle forming elements. These are most readily secured in skim milk, bran, oats, gluten meal, barley, clover and alfalfa. Besides these feeds, which will form the basis of the ration, the sows should be given as much cob

J. E. Trigg
A Practical View.
"He's nothing but a hypocrite. Isn't it disgusting for a man to use his religion as a cloak?"
"Yes, and, what's more, it's foolish, for religion such as his is necessarily so flimsy that he's liable to catch cold in it."—Exchange.
