DESERTION IS ALLEGED

Virgil Tompkins Asks Court to Seize Marriage Bonds and Give Her Custody of Two Minor Children.

Alleging desertion and non-support Virgil L. Tompkins has begun an action in department No. 2 of the Polk county circuit court against Frank D. Tompkins, for absolute divorce and the custody of the two minor children of the union, according to papers filed in the county clerk's office Saturday by L. D. Brown, attorney for plaintiff.

The complaint relates that the couple were married in Pendleton, Ore., October 2, 1905, and that, on October 19, 1911, in Medford, Jackson county, the defendant "willfully and without cause deserted and abandoned said plaintiff." Plaintiff asks for the care and custody of two minor children, Emma D., aged 4 years, and Lloyd F., aged 2.

Wants Balance For Horse. W. E. Schafer, by his attorney Oscar Hayter, has begun an action in county court against C. P. Cooper praying for judgment in the sum of \$60 and costs, alleging the amount due him as the balance on a horse trade.

POLK PIONEER ANSWERS GRIM REAPER'S SUMMONS

John Murphy Passes Away at His Home in Monmouth Following Long Illness.

Monmouth, July 2.—(Special)—John Murphy, a Polk pioneer and well-known resident of the county, died at his home in Monmouth Saturday morning of a complication of diseases following an illness of several years' duration, aged 69 years, eight months and two days. Funeral services were conducted at the Christian church in Monmouth on Sunday afternoon at 2 o'clock by Rev. W. A. Wood and interment took place in the Monmouth cemetery.

Deceased is survived by four sons and three daughters as follows: Chester, Santa Cruz, Cal.; George and Charles, of Waldport, Ore.; William; Misses Inez and Mary, of Waldport, and Mrs. Lenna Guthrie, of Corvallis.

Mr. Murphy was born in Knox county, Ill., on October 27, 1842, and came to Oregon in 1852 settling in Polk county where he has since resided. He was recognized as a faithful representative of the pioneer days and was always foremost in

public matters. He liked nothing better than to promote all matters for the public good and was at all times a good citizen, agreeable neighbor and faithful friend.

FARM PROBLEMS IN CLASS

O. A. C. Professor Advises Teachers to Use Babcock Milk Test.

Oregon Agricultural College, Corvallis, July 1.—That rural school teachers use the problems of the farm in their arithmetic classes, especially the testing of milk in teaching percentage, was suggested by Prof. E. L. Kent in a lecture before the teachers attending the summer session at the Oregon Agricultural college this week.

"The Babcock test is one of the best ways of teaching percentage in arithmetic classes," said Prof. Kent after a careful demonstration of the test with a simple outfit such as any teacher could have on their desk.

"For instance, if a cow produces 50 pounds of milk a day which tests 2.5 per cent of fat content, her production is 1.456 pounds of fat a day. If a cow gives 42 pounds, but the test is 2.5 per cent, she will give 1.47 pounds of fat. Carrying the problem out by means of daily records to the end of the month, a cow producing 725 pounds in a month with a test of 2.5 per cent will give 25.375 pounds of fat a month. Or, a cow giving 42 pounds a day testing 3.5 per cent, gives 1,260 pounds of milk and 44.1 pounds of fat a month. The problems may be further elaborated by finding the gain in dollars, supposing the value of the butter fat on the market to be, say \$2.7 a pound. By using the cost of feed and other items, further complications and variations of the problems can be made for the older pupils.

"These problems will help, no doubt, in moulding the attitude of the parents toward the schools and the branches taught. A farmer sees more 'sense' in a study which has evident bearing on farming, and it will often, too, stir up rivalry among the farmers. One will be unwilling that his favorite cow be outdone by a neighbor's. Thus the teaching of the Babcock test and its use in the arithmetic class may not only interest the boys and keep them in school longer, but may benefit the whole community by raising the dairy standard."

LIVING HIGH IN OLD DAYS

Old Account of Former Dallas Store Tells Interesting Tales.

That it cost something for luxuries in the old days is evidenced by a perusal of an old account book kept by W. C. Brown and Lucien Heath who, years ago, were engaged in the mercantile business in Dallas. The entries made show dates from 1854

The Bridal Party at the Recent Leslie-Ide Wedding

Photo by American Press Association.

A WEDDING of international interest was that of Miss Marjorie Ide and Shane Leslie, which was solemnized recently at the home of W. Bourke Cockran at Port Washington, N. Y. The bride is the daughter of Henry C. Ide, minister to Spain, and the bridegroom, who is the son of Colonel and Mrs. John Leslie of London, is well known in this country through his work for the Gaelic league. Mrs. Cockran, the bride's sister, who was her only attendant, is seen in the photograph at her right. Her father stands on the steps in the background. The ushers were Representative Nicholas Longworth, Peter Finley Dunne ("Mr. Dooley"), Frank J. Griswold and J. Norman de R. Whitehouse. Mrs. Leslie's veil was of Carrickmacross lace, a gift from the brothers of the bridegroom.

to 1858 and among the names appearing are those of T. J. Hayter, David Guthrie, Joseph Edwards and others. Customers of Brown & Heath paid \$1.00 for five pounds of sugar and \$1.00 for five and a half pounds of coffee. The coffee was sold in its natural state, just as picked from the bush and required two roastings before using, one to remove the berry and another to brown it. Salt was four cents a pound and ap-

ple \$2.00 a bushel. One could buy six pounds of rice for \$1.00. Supplies for the grocery were hauled from Portland by team, but later, or during the winter months when the water was high in the Willamette they were shipped up by river and teamed from the landing place to Dallas.

ALEXANDER MEIKLEJOHN.

He is the New President of Amherst College—His Career.

Alexander Meiklejohn, who was recently elected president of Amherst college, is probably the youngest teacher in this country who ever succeeded to a post of such responsibility and authority in educational affairs. Although for a quarter of his lifetime he has been dean of Brown university, an administrative post of first importance in the college world, he is only forty years old. Like President Schurman of Cornell and Dr. F. L. Patton of Princeton, he was born outside the United States.

Of pure Scotch descent, Dr. Meiklejohn came to this country when eight years old from Rochdale, England, where he was born on Feb. 3, 1872. He was graduated from the public schools of Pawtucket, R. I., and entered Brown university, finishing in the class of '93. Two years later he got his degree of A. M. and became instructor, and about that time also began to take up postgraduate work at Cornell. He had determined upon teaching for his life work, and at that time the Ithaca institution was the active home of the new psychology.

After two years at Cornell, Dr. Meiklejohn took his degree in 1897 as doc-

tor of philosophy and returned to Brown. There followed four years of classroom work, and at the end of that time he was made dean of the university, an almost unprecedented advance. In spite of the trying duties which devolved upon him, he refused to give up his classroom work and as a result became an associate professor in 1903 and a full professor in 1906.

Although a man of medium height and physique, he was an all around athlete in his college days, played on several varsity teams and is still an expert cricket player. He has been intimately connected with athletics at Brown during his term as dean, is a fraternity man and has worked hard to improve the scholarship of the fraternities at Brown.

"Critic" Wisdom.

The Merino ewe and the mutton ram make about as profitable a sheep combination as it is possible to get.

When you buy a beef or dairy animal insist on getting an official certificate showing that it has been tuberculin tested with no reaction.

The farmer in New Zealand provides his horses and cows with a heavy canvas cover during the winter and in wet weather, the covers being generally used for animals turned out to pasture.

Nine parts of corn and one part of tankage make the best and cheapest ration for growing shoties and will operate to reduce the amount of corn consumed for each pound of gain when compared with a ration of corn only.—Kansas Farmer.

You can make your harness last twice as long by giving it proper care, and it takes but a very little time to do it. "A good set of double harness," says C. F. Chase, assistant in farm mechanics at the Kansas Agricultural college, "if properly cared for should last the working lifetime of a horse."

Accepting the average price of commercial feeding stuffs at \$30 a ton and considering one pound of dry matter in manure equal to one pound of dry matter in grains, manure may be used economically in the ration to replace one-half the grain ordinarily fed when they can be produced and stored ready for feeding at \$4 per ton.—New Hampshire Station.

Health Hints.

People cultivate nerves to a large extent and do not apply simple rules to cure them. Healthy work, particularly out of doors, is an excellent antidote to nerves.

Onions are a very good tonic for nervous people. Cranberries are good for sufferers from inactive liver.

Our bravest lessons are not learned through success, but misadventure.—Alcott.

ALEXANDER MEIKLEJOHN.
