

NEW RULES FROM BUREAU OF LABOR

Deputy Labor Commissioners Ordered to Enforce Following Rules:

In pursuance and according to the conclusion reached at our conference, the following rules will be enforced: Slashers—All guards on slasher sawmills must be continuous so as to cover the entire series of saws; the guard to be made solid and to extend beyond the edge of the saw at least 24 inches, and the height from the platform to be not over an inch above the arbor line. Boilers—1. All horizontal tubular boilers must have fusible plugs, placed in rear tube sheet at least 2 1/2 inches above top row of flues. 2. All fire box boilers must have fusible plugs, to be placed at the highest point of crown sheet. 3. All safety valves must be examined frequently and kept in good working condition. 4. All boilers must be provided with three water gauge cocks. 5. All boilers must have blow off connection at the bottom of the back end or lowest point of boiler. 6. All water glasses on boilers must be properly guarded. Spike Rolls—Spike live rolls used for conveying lumber in the mills or yards must be discontinued. Linotype and monotype machines—All metal pots on linotype and monotype machines must be piped so as to carry vapor out of room. O. P. HOFF, Commissioner.

Death of Former Polk Resident.

From the Advocate, Greenville, Ohio. It is taken the notice of the death of Frank Arnold, who up to six years ago was a resident of Polk county in the Lewisville neighborhood, where his father had charge of the Evangelical work in that circuit.

Frank Arnold, second son of W. L. and R. C. Arnold, was born near Jaysville, Ohio, April 4, 1886 and died at his home near Ninevah, July 29, 1913, aged 27 years, 3 months and 16 days.

At the age of two years he was taken by his parents to the state of Oregon, where he lived until six years ago, when he returned to Darke county.

As a boy and young man he was a steady and efficient worker on the farm and in the logging camp. In all these places he won the respect and love of his employers and his fellow-workers. Through all the temptations of these surroundings he lived a clean, upright life.

On October 30, 1909, he was married to Miss Lenna Poe, daughter of Joshua and Susan Poe, of Van Buren township. To bless this union were born two daughters, Dorothy Lorent, April 17, 1911, and Edith May, December 15, 1912.

There are left to mourn his untimely departure the grief-stricken widow, two small children, father, mother and five brothers, one, the baby brother, having preceded him to the other world, grandfather, aunts, uncles and many other relatives.

THE ONLY WAY

Many Dallas Citizens Have Discovered it.

Just what to do when the kidneys are affected, is a question that concerns both young and old. Weak kidneys neglected in childhood lead to life-long suffering. People of advanced years, with less vitality, suffer doubly. In youth or age, languor, backache, urinary irregularity, dizziness and nervousness make life a burden.

There is one remedy that acts directly on the kidneys. Doan's Kidney Pills owe their world-wide fame to the fact that they have cured thousands of cases of sick kidneys and cured them permanently.

Mrs. Joseph Hoberg, Grant St., McMinnville, Ore., says: "I am always glad to tell other kidney sufferers what a good remedy Doan's Kidney Pills are. I gave a statement publicly recommending them in 1907 and I willingly confirm all I then said in their favor."

For sale by all dealers. Price 50 cents. Foster-Milburn Co., Buffalo, New York, sole agents for the United States.

Remember the name—Doan's—and take no other.

All Kinds of Insurance. Fire, Casualty, Automobile and Plate Glass Policies on liberal commissions. Money to loan on farm mortgages. C. L. Prielhard, with McBee Land Co.

We have students to send their own way. Doubtless for girls, Christian instruction, excellent surroundings. Tuition \$100.00. For more information write to Albany College, Albany, Oregon.'

SOME ALFALFA EXPERIMENTS.

In view of the widespread as well as increasing interest in the subject of alfalfa growing it is worth giving a summary in this department of Bulletin No. 136, which has been lately issued by the Nebraska experiment station and tells of the experience of farmers in different parts of the state in getting a start with this valuable legume. Twelve farmers co-operated in the work, carrying it on according to suggestions and directions of the station directors. In this co-operative experimental work it was the aim to try out and compare the effect of three treatments in securing a stand of alfalfa and on subsequent growth—first, liquid nitrogen cultures sent out by the United States department of agriculture; second, soil from well established alfalfa fields, and, third, farm manure. Owing to the prevalence of drought and grasshoppers during the years 1910 and 1911 there was a failure on the part of some of the co-operators to get a stand, but the results secured by those who did get a stand brought out the following conclusions: That the use of farm manure in proper amounts and properly applied is to be strongly recommended, that where difficulty is experienced in getting a stand the soil should be inoculated and that inoculation with soil from a well established alfalfa field or sweet clover patch gave uniformly better results than were secured by the use of liquid cultures.

FOR CANNING SMALL FRUIT.

A lady reader of these notes gives the writer the following recipe for canning strawberries, raspberries and other small fruits and has given him a can of fine looking strawberries as proof that the method she follows is a success: She first sterilizes her cans and covers with boiling water, then fills them with the uncooked berries, setting the cans in a dishpan containing a quantity of warm water. Prior to this she has prepared her sirup, which is boiling hot. As soon as the water in the pan is brought to a boil the cans containing the berries are removed to a platter and the sirup is then poured over them. As the berries shrink some, reducing the volume in the cans, enough sirup is added so that the cans run over. The covers are then screwed on, and the job is done. The chief advantage of this method seems to be that the berries retain their shape much better than where they are cooked for some time.

SEED CORN TESTS.

Recent tests which the students of the agricultural course of the high school in the writer's home town have made of a large supply of seed corn saved last fall have brought out two interesting facts—first that ears that were picked and hung up in September before any heavy frost occurred show a practically perfect germination test, while ears that were picked after the first heavy freeze not only show a larger number of dead kernels, but in many instances the germinating power of those that grow is weak. If the average farmer would act on the information contained in these tests—pick his corn before there is any frost and use care in keeping it dry during the winter—there would be practically no such thing as a seed corn problem.

IMPORTANT TO DAIRYMEN.

It looks very much as if the day was not far distant when all dairymen furnishing milk to cities of any considerable size would be compelled to test their cows yearly for the detection of tuberculosis. The supreme court of the United States has affirmed the decision of a lower court granting municipalities the right of insisting on this test, and this gives the necessary foundation. The wise dairyman who looks to the future of his business will not only take the steps necessary to eradicate the disease, but will look carefully to the conditions under which his cows are kept so as to reduce to a minimum the likelihood of the development of the disease. And he will be justified in advertising his milk as from tuberculin tested cows.

POOR MANAGEMENT.

The Nebraska College of Agriculture last year sent out inquiries to 2,000 farmers who are engaged in the growing of wheat and found that with but few exceptions they burned their straw. The station officials say that in effect these farmers, as well as thousands of others who follow the same practice in Missouri, Kansas and Oklahoma, are guilty of arson and are directly impairing the productivity and physical quality of their soils. The station discourages this practice and urges the use of the straw as a roughage for winter feeding, as a fertilizer, as a preventive of soil blowing, to improve the drainage, to loosen heavy and adhesive soils and for bedding.

A PRACTICAL EXPERIMENT.

No more needed or practical experiment could be conducted by the class in agriculture in many sections than that of making a test of alfalfa growing. Directions best suited to the climatic and soil conditions of any locality would be gladly furnished by the directors of the state agricultural college. Rightly conducted, such an experiment would furnish just the data that dozens of farmers in the territory tributary to the school would be only too glad to get. The experiment would unquestionably prove both practical and interesting.

UNIQUE NAME

Can You Pronounce Name of World's Most Famous CATARRH Remedy. High-o-mee—that's the proper way to pronounce HYOMEI, the sure breathing remedy that has rid tens of thousands of people of vile and disgusting Catarrh. Booth's HYOMEI is made of Australian eucalyptus combined with thymol and some listerian antiseptics and is free from cocaine or any harmful drug. Booth's HYOMEI is guaranteed to end the misery of Catarrh or money back. It is simply splendid for Croup, Coughs or Bronchitis. Complete outfit, including hard rubber inhaler, \$1.00. Extra bottles of HYOMEI, if later needed, 50 cents at Stafrin's, and druggists everywhere. Just breathe it—no stomach dosing.

Original prices remain marked in plain figures. Look at the price tag. Give us one-half of the price marked and take the suit. REMEMBER--- This extraordinary offer is good until September 1st only so don't delay. Take advantage of the unusual opportunity. Many of the suits are heavy fall weight and will do nicely for your next winter suit, and at HALF PRICE. All Other Summer Goods at Remarkably Low Prices. Leading Clothier WM. HERZOG Dallas Oregon'

FIFTEEN THOUSAND PEOPLE DO HOMAGE TO GREAT MAN Birthday of Founder of Osteopathy Is Fittingly Celebrated. Monster Parade in Honor.

For a hundred years or more to come people will tell their children and their children's children of one day in the long ago of the celebration of the birthday anniversary of the great man who made Kirksville possible. It was an epoch making day and celebrated in the most fitting way possible. Kirksville has seen many great times in her history, but nothing comparable with this, and in the elements that entered into it shall probably never see its like in all the years to come.

Sitting under the shade of a magnificent tree in the midst of those splendid institutions which were the product of his brain, sat an old man, whose years will soon reach the long mark called a century, and who is crowned with the hoary glory of an honored and successful life. As he watched the procession sweep by with its thousands of people doing him homage and rendering him obeisance, one wonders what were his thoughts and if they did not go back a comparative few short years when unknown, unloved and alone, he battled against fearful odds for the great thought which has meant so much for humanity. Even where he sat he could look across to where stood the little hotel where he taught his first class and where was born the great institution which now bears his name.

It is given to but few men of great ideas to linger long enough in this world to see those ideas reap an abundance of rich fruit and receive the recognition and applause of the world. One of these is Dr. Andrew Taylor Still. Great pageants and parades have often been held in the world's history in honor of victory of both war and peace. This of yesterday was unique, in that it represented both—a war against the tyranny of fear, sickness, sorrow and suffering—of peace, because with its blessed healing power it has brought into countless homes in the uttermost parts of the earth blessed relief from the things that afflict human kind, brought a serenity and peace which before his time the world knew not of.

It was a great parade, conducted by a great people, and in honor of a great man. It shall not be forgotten as long as the human heart is stirred by the holy sense of gratitude and love. The procession was without doubt the largest ever known in any city of this size in the western country. It

only a small portion of them. Then come Oregon, one of the prettiest things in the entire parade. A huge crowd arranged by members of the delegation and with a little girl in the center, with appropriate colors representing Portland, Oregon, known as the Rose City.

And finally the local company of militia. The boys were all in their khaki uniforms and presented a splendid appearance.

It was beyond doubt or peradventure the largest crowd ever assembled within the gates of Kirksville in all her history.

They came on every train, by wagon, buggy, auto and every conceivable way, and they were all here, some of them coming quite early.

Good judges estimate the crowd at 15,000 and it seemed like there were many more than that. Nine thousand people were fed at the barbecue and it is certain that thousands were turned away empty.

It is to be regretted that there was not plenty and to spare, but no one figured on such vast throngs. It was estimated at first that 5,000 would probably be the limit of the number to be fed, but almost double that number were taken care of, and yet there was far from enough.

The meats were splendidly barbecued, those who got to feed fat on it say that nothing better was ever served and it was cooked absolutely to perfection. Some idea as to the number fed may be gained from the fact that 5,200 pounds of meat were roasted in the pits and proved all too little for the crowd. There were 12,000 roasting ears and a full carload of watermelons. A wagon load of them, containing 235 melons was cut and eaten by the crowd in 22 minutes. The corn supply was the first to give out and the meat the last.

A huge tent for the speakers had been erected on the grounds and this was soon filled, but so dense was the throng that the people who gathered in the tent could hardly be missed.

The afternoon program consisted of a speech by Attorney General Barker and addresses by Dr. A. G. Hildreth and Dr. Percy H. Woodall. All the speakers dwelt at some length on Dr. A. T. Still and his service to humanity.

Last night's program was one of the most enjoyable things of the entire convention and the tent where the exercises were held was filled to overflowing.

Dr. C. E. Still made a very tender talk expressing his appreciation of what had been done and said in honor of his father. He stated that his father watched the parade closely from his reviewing stand and after it was over and he turned to go back into the house his eyes filled with tears.

So our story begins and ends and has its center circumference with a dear old man whose great labor is finished and who is waiting quietly for the summons which will mean a just recompense of reward.—Kirksville Democrat.
