

There is a Real Difference

Cream of tartar, derived from grapes, is used in Royal Baking Powder because it is the best and most healthful ingredient known for the purpose.

Phosphate and alum, which are derived from mineral sources, are used in some baking powders, instead of cream of tartar, because they are cheaper.

If you have been induced to use baking powders made from alum or phosphate, use Royal Baking Powder instead. You will be pleased with the results and the difference in the quality of the food.
