"THE TIME IS COMING

WHEN THE ELECTRIC MOTOR
MILL MOVE THE WORLD"

Said Thomas A. Edison recently.

Certain types of engines have more than 200 reciprocating parts. The *electric motor* has but one moving or revolving part.

Many of the prosperous factories of the state are operated today with electricity served from *central generating stations*.

Central station electric power increases output and saves cost.

Our power engineers will make careful investigations of power problems and render dependable, scientific reports, without charge.

Does your watch need overhauling?

If it does, the sooner you have it done, the better it is for the watch. A neglected watch may be worn out before you realize that there is very much wrong with it. Don't expect a watch that needs cleaning, or other repairs, to run satisfactorily by merely putting in a new mainspring. Don't expect a mainspring to plough through too much dirt. Don't expect a mainspring to always endure extreme changes in temperature, or neglect from lack of oiling or cleaning. Your watch is subject to wear the same as any other machinery, and neglected machinery soon becomes worn out and worthless. A watch is a delicate machine; don't neglect yours.

"Honesty" is my motto.

WALTER G. BROWN, Watchmaker and Jeweler.
