"THE TIME IS COMING WHEN THE ELECTRIC MOTOR MILL MOVE THE WORLD"

Said Thomas A. Edison recently.

Certain types of engines have more than 200 reciprocating parts. The electric motor has but one moving or revolving part.

Many of the prosperous factories of the state are operated today with electricity served from central generating stations.

Central station electric power increases output and saves cost.

Our power engineers will make careful investigations of power problems and render dependable, scientific reports, without charge.
