

John Deere Spreader

The Spreader with the Beater on the Axle

Order Early

Thousands Sold for Quick Delivery

Two Sizes

The Simplest Spreader Made

No Clutches No Chains
No Adjustments

Easy to Load Roller Bearings
Light Draft

Decided Improvement in Spreader Construction

Up to this time every spreader on the market has been constructed along the same general lines. The John Deere Spreader, however, is different. It is entirely new and there is nothing else like it on the market.

All the working parts are mounted on the main axle. There are no struts and stressors on the sides of frame and no clutches or chains to give trouble. The John Deere Spreader is low down, easy to load, very simple, and always ready for business. It cannot get out of order.

Beater on Axle

Beater on Axle

All working parts on the John Deere Spreader are mounted on the rear axle. There are no independent struts or stressors to give trouble, nor chains or sets of gears to get out of order. All struts and stressors are borne by the main axle and are not transmitted

to the side of the box or the frame of the spreader. Power to drive the beater is taken from the rear axle and operates through a planetary transmission (similar to that used on automobiles) mounted on the rear axle within the beater.

Light Draft—Few Parts

There are at least two reasons why the John Deere Spreader is the lightest draft spreader made. One is that it has four sets of roller bearings—two in the front wheels and two on the main axle and beater. They reduce the draft materially. Another reason is that the John Deere Spreader has so few parts. It has about 150 less types of castings than the simplest spreader heretofore made. It is only natural that the fewer parts a machine has, the easier it will operate. When the John Deere Spreader is out of gear, it is simply a wagon.

Roller Bearing

Easy to Load

The first three feet of manure is lifted with an ordinary spreader are easiest of all. The real hard work is from this height to the top of the ordinary spreader.

The John Deere Spreader is low down. It is only necessary to lift each forkful three feet. Thus, the hard work of loading a manure spreader is done away with. Besides, the person doing the loading can see inside the spreader at all times. Each forkful is placed exactly where it is needed.

Easy to Load

Out of Gear

No Adjustments

On the John Deere Spreader no adjustments are necessary. On the simplest spreader heretofore made, it was always necessary to make from ten to twenty adjustments before the machine would work at all. John Deere Spreader is thrown in gear by moving a heavy dog back until it engages a stop at the rear of the machine. No clutch used.

Positive Non-Racing Apron

By the use of a very simple locking device inside the ratchet feed, the apron is positively locked against racing when spreading on hill or over exceedingly rough ground. The result is that when spreading with the John Deere Spreader, the manure is always spread evenly. This is not possible on any other ratchet feed spreader made.

Change of Feed

Change of feed is accomplished by a double shoe which is removed from the seat. This shoe determines the number of teeth the ratchets engage at each stroke. The John Deere Spreader has a variation of from five to twenty-five loads to the acre.

Substantial Steel Frame, Like the Modern Railway Bridge

Both the side sills in the John Deere Spreader are of high carbon channel steel with the channels turned to the inside. Into these hollows are fitted four large wooden cross sills. Being bolted, these cross sills can be kept tight, insuring rigidity and alignment of frame at all times.

Built Like a Steel Bridge

Even if You Don't Need a New Spreader Now—Come in and See It

WINEGAR & LORENCE

MONMOUTH, OREGON

Local and Personal Monmouth Heights

Misses Pearl Davidson and Blanche Stitt drove over to Salem, Monday.

Brown & Sibley, attorneys and abstracters, 610 Mill Street, Dallas, Oregon.

See our ad. BIG CUT IN EDISON WAX RECORDS. At Craven & Moore, Independence, Ore.

Several from here attended the football game at Albany, Saturday, between Corvallis and Eugene.
