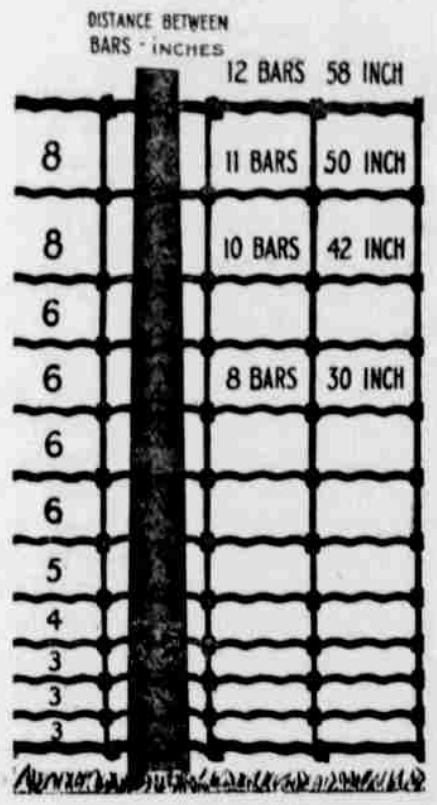
If you want the best in PLOWS buy

The farmer who buys either the **New Deere Gang** or **Sulky Plow** gets absolutely the finest, most servicable implement of its kind ever produced. Before buying such a tool you'll want to know how it's built, how it works and what it will do for you. As to quality of the material and workmanship the name **Deere** on it is a sufficient guarantee for you on those points. For ease of operation and light draft the **New Deere** will be a happy surprise to you. The many new features which enable the operator to do work with it he never could do before, with a sulky or gang plow, are marvels of simplicity and effectiveness. It takes a whole book and a lot of illustrations to explain them all, and we know you will want to read the book.

We feel sure we have just what you want in wire fencing



WINEGAR & LORENCE

Monmouth, - - - - - Oregon

Deep Moisture Storage

Deep storage of moisture, requisite to successful dry farming, can be secured only by keeping the surface soil in an absorptive, sponge-like condition, says Professor H. D. Scudder, the O. A. C. agronomist. This should be continued as far as possible through the entire precipitation period, by good preparation of the soil. Plowing and disking and increasing the humus content of the soil are the chief means of keeping the surface conditions favorable, permitting the moisture to strike in both by percolation and capillary attraction downward. If the surface soil is closely compacted during winter and early spring the surface water runs off, damaging the surface by washings and the subsoils by keeping them dry. Roots of crops grown on soils in this condition lack the moisture and feeding area to be secured in dry farming countries chiefly from deeply stored moisture.
