Portland, Oregon.

ITALIANS MUST MAKE GESTURES WHEN TALKING

The gestures of the Italian require a profound course of study, extending over several years, before they can be understood by the foreigner. When an Italian wishes to signal a person to approach, he flaps his hands as though to wave him away. This keeps an uneducated American on the jump when he is engaged, for example, in following an Italian through the endless corridors of an Italian government building.

The word "no" in Italian, when unaccompanied by a gesture, has no force whatever and is not considered to mean "no." To mean "no," it must be accompanied by a wagging gesture of the extended thumb and forefinger held ear high.

The motion of fondling the surface of a large imaginary sphere with both hands means that the motion is adopting a purely judicial attitude toward the subject under discussion, and that he is being in no way one-sided. The motion of holding an imaginary

bean in the finger tips of one hand while the finger tips in turn are held immediately in front of the eyes or nose of the finger owner's vis-a-vis means that the speaker is restraining himself with impatience and that any denial of his statements must be backed by proof.

When a speaker makes motions as though he were fighting an octopus, it means that he doesn't care to be interrupted in his remarks. The motion of dusting an imaginary bit of lint from the under jaw with the back of the finger tips means that the duster holds in derision the opinions of the person with whom he is speaking.

If Italians were prohibited by law from gesturing, the explosions from suppressed emotion in Italy would almost depopulate the country.—K. L. Roberts in Saturday Evening Post.

Violet scented seaweed grows in the lakes of the Manlyshlak peninsula in the Caspian sea.

Girl Kisses a Stranger; is Introduced Later

Columbia, Mo.—A party of university students was waiting at the Washburn station in Columbia to meet a girl coming in to attend a fraternity dance.

It was dark when the train arrived and the young folks rushed out on the dimly-lighted platform. The girl appeared and waved at the group. As she stepped off the train a young man reached out. She ran up, threw her

arms around him and kissed him. Then she turned to greet the rest of the party.

Another young man put his hand on her shoulder. It was her fiancé.

"Just a minute, Mary," he said. "I want you to meet my roommate, Bill Jackson—the man you kissed just now."

Cold is a natural disinfectant.

Mr. Wright Comes Along

By CLARISSA MACKIE

The fortune teller scanned Patty's pink palm with narrowed eyes. Then she peered intently into the great crystal ball before her.

"A lover for my lady," she said impressively.

"Oh, bother!" cried Patty, thrilled to the core.

"Perhaps he is not coming," gloomed the palmist maliciously. "Ah, I see that a pretty lady does not love him— he rides away—far away. The line in the palm and what the crystal reveals do not agree—"

"Try the cards, then, Jane," broke in a tart voice behind Patty. "Get on with your fortune telling, my dear. Here is poor Patty hanging by her ears, so to speak, and waiting—"

"Ethel, you are idiotic," offered the amateur seeress, forgetting pose and foreign accent. "Pretty Lady Patty, your lover is coming to you riding on a lion—there, greedy one, is not that your money's worth?" she glibed.

Patty Gray tossed another half-dollar on the scarlet cloth and went out laughing. This bazaar to raise money for daily vacation schools had been a huge success, and Patty, who had worked tirelessly from the beginning, was now enjoying a little of the fun. Jane's fortune telling was always amusing—her French girl had a ready wit that added a tank of credulity to her predictions, and she sent all her clients away happy, but Patty's fortune did not please Patty herself.

"How absurd! Coming on a lion, indeed! I don't believe there is a circus within a hundred miles!" With three or four eligible young men trailing after, not one of whom Patty cared a spic for, it was a pity that Jane Lamont could not have unearthed somebody out of the ordinary for one of her dearest friends.

"Perhaps she is not as mad as it sounds," thought Patty, sitting down on one of the deserted benches that overlooked the fountain and the merry-go-round. "I wonder where Dick Haben is tonight? He has acted simply horrid ever since the barbers' dance, when Ernest monopolized me. Well, I have sent them all away for good now, and I was hoping—"

Patty sat open-mouthed, which was entirely becoming, for she was a remarkably pretty girl.

Something was happening over at the merry-go-round. She hurried over and discovered that young Laddie Smith had been trying circus stunts on the wooden horses and had bumped his head violently. Patty rendered first aid—plenty of ice and a trip home in the family car. "That is that!" she sighed.

When the little crowd had scattered Patty remained near the carousel watching the children, and sometimes riding herself. Once she sat upon a camel and went circling and swaying around the ring trying to extract romance from the presence of the wooden camel upon which she rode.

"No use in 'pretending,'" she smiled to herself, "that I am a sheik's daughter speeding over the hot sands of the Sahara, when a glimpse over my left shoulder reveals the glimmering fountain."

The sheik's daughter pursued her innocent pastime, hailed by all the children as a rare playmate, until one by one they departed for the refreshment tent, leaving Patty alone with the flying music and the slowing carousel.

"I feel like the lonely lady that sits in the sight-seeking bus to draw customers," sighed Patty, when Henry, the owner of the carousel, started the music off with an alluring tempo that brought a wild scramble from the refreshment tents. Now there was fun a-plenty.

Patty clung to her mount and whirled dizzily; she wondered what her family would think to see her abandon herself to this child's play, when eligible young men were to be had for the acceptance thereof, for Patty had played about for a long time and her parents wanted to see her happily married. They were waiting patiently for Patty to really care for some one, because "Mr. Wright" had not yet appeared at the Gray home.

Patty yawned and turned around to see if her neighbors included any friends, because the children were leaving now and their elders were recklessly buying tickets for the merry-go-round.

"Oh," cried Patty, and turned face front again, her cheeks growing pink. Just behind her camel was a roaring lion in vain pursuit. Mounted on the lion was a man.

A man riding a lion!

Yes, indeed, a young man on a wooden lion, riding with all the easy manner of a thorough horseman. A stranger, yet the most fascinating man, not too young, with hazel eyes that regarded her surprisedly, admiringly, for the brief instant she had looked around. She would not look around again—no, indeed. For what the fortune teller had said in jest was really coming true—perhaps!

Her lover was coming on a lion!

"How silly I am," thought Patty, then a sudden dizziness as the machine slowed down and stopped short. She knew she was falling from her camel, then sinking down into utter blackness of oblivion, the "sheik's daughter" fell into the arms of the lion rider.

What could be more romantic than that he had seen her swooning and

leaping from his beast had caught her in his strong arms? It was he who bore her to the first-aid tent, and reluctantly gave her into the care of the nurse in charge.

"She is quite all right now, thank you," the nurse told him smilingly after he had waited about the tent for ten anxious minutes. "Miss Gray asked me to express her gratitude for your watchfulness, as it saved her from a severe fall."

"I am glad I was there, nurse," he said with his grave smile, and then hurriedly sought the fortune-teller's tent. His Cousin Jane Lamont was putting on a stiff-brimmed sailor hat and looked very smart and trim in her silk tailored suit; her black eyes were dancing.

"Jane, who is Miss Gray?" he asked abruptly.

Jane grinned impishly. "Miss Gray is Marcia, Josephine, Bertha, Harriet, Patty—"

"Stop at Patty, please. She sounds like Patty," he cried.

"You sound like a lunatic, Bobby," she retorted, but her eyes danced.

"What does she look like, dear Jane?"

"Dear Bobby, what does who look like?" she mimicked.

"You would tell my fortune," he complained.

"We needed the money," confessed Jane cheerfully.

"The means should be worthy of the cause."

"Fiddlesticks! Didn't you get your money's worth?"

"So far! But why not give me more? I am willing to pay for that, too!"

"It will cost you \$10 for the hospital and the vacation schools," she warned.

"Here is twelve ten—give it to me brimming full."

"I thank you! The motive behind the offering is worthy of the giver! What do you want to know, young man?"

"Did you really mean what you said about my meeting—"

"Yes; I said you would go forth upon a lion and meet the girl you would marry."

"Had you in mind the wooden lions of the carousel?" he hesitated with a boyish appeal in his fine eyes.

"They are the only lions it is safe to ride on the merry-go-round."

"You darling idiot, Jane. I met her; I was riding directly behind her—she on one of those ridiculous camels. She's wonderful, and I want to meet her, Jane! She fainted and I carried her to the tent. She sent out her thanks—name is Gray—is it Patty?"

"Who else could it be? And don't ask me where she lives, for she is staying with us for a week—and Bobby Wright, behave yourself! Ah, here is Miss Gray now. Patty, let me present my cousin, Mr. Wright."

Patty blushed divinely and Bobby blushed the way young men in love for the first time with the one girl can blush, and that is the way Mr. Wright came along—riding on a lion, straight into Patty's heart.

VENTILATION IS OF PRIME IMPORTANCE

"Ventilation in the dairy barn is of prime importance both from the standpoint of the health of the herd and for the production of clean, untainted milk." Is the statement of S. W. Mead, dairy specialist at the New Jersey state experiment station.

"Fresh air is the greatest enemy of tuberculosis. Furthermore, an abundant supply of fresh air drives out all unpleasant odors and thereby prevents them from tainting the milk. Thus, an abundant supply of fresh air is just as important for economical milk production as is proper feed."

"Various ventilating systems are on the market, all of which work on the principle of expansion and contraction. Warm air expands and becomes lighter than an equal volume of cold contracted air. The warm air, therefore, rises and the cold air descends."

"A proper ventilating system must provide for the entrance of fresh air and the exit of foul air in such a way that the warmth of the barn is preserved and the air kept pure and about as warm at the feet as at the heads of the animals. A cow weighing a thousand pounds inhales 224 pounds of air in 24 hours—nearly twice the weight of her food and drink. This is at the rate of 3.542 cubic feet per hour."

Haphazard ventilation may result either in the cows not getting enough air to supply their requirements or getting it in a way which chills them, thus making them susceptible to disease and reducing their milk flow.

"Farmers desiring information on good methods of ventilation may get it by writing to the New Jersey State College of Agriculture, New Brunswick."

WINDIEST ZONE OF NORTH HEMISPHERE

The windiest zone of the northern hemisphere embraces the northern United States and southern Canada. The windiest months are those of late August, winter and very early spring. August has the lowest average wind velocity, March and early April the highest. Wind is the flow of air from an area of low pressure. The greater the contrast of pressure between the masses of air over two adjacent regions, the swifter and stronger will the wind blow. Pressure differences are largely dependent upon temperature contrasts. In summer the temperature contrast between high and low latitudes is relatively small, in winter it is great, for while the snow and ice-covered North gets colder and colder, in low latitudes there is little temperature variation through the year. Therefore, the pressure gradient, to use the term of meteorology, is gentle in summer and steep in winter. The gradient may be likened to a slope of land. The air pushes down the gradient from high pressure to low, as water flows down a variable slope. The steeper the slope, the greater the velocity, whether it be air or water. Therefore, because the gradient is steeper in the cold months, the fiercer are the winds. There is, however, a curious difference between the flow of a stream of water and that of the air. The water flows down the slope, the air along it, owing to the rotation of the earth on its axis.

Meaning of Word "Sib"

Until a few years ago there were probably few people outside the makers of dictionaries who had ever seen or heard the word "sib." Yet in the rural districts of England it used to be a good enough word, a little rough and uncouth, like other short and ugly terms, but with a clear and definite meaning that no other single word had. It means a brother or a sister, or sometimes any collateral relatives of the same stock. Yet the expression never got into good society until the science of eugenics came along. The eugenists took to it right away for it fitted for them a long-felt want, and in papers on eugenics it is frequently met, meaning brother or sister. Science has given it a good character and new dictionary writers will have to take from it the tag which labels it as uncouth and out of date.

Many a Storm He's Weathered.
Wife—Why do you think Cassel the soloist has so little hair?
Hubby—It's probably been blown away by the storms of applause that have swept over his head.

DAIRY FACTS

VENTILATION IS OF PRIME IMPORTANCE

"Ventilation in the dairy barn is of prime importance both from the standpoint of the health of the herd and for the production of clean, untainted milk." Is the statement of S. W. Mead, dairy specialist at the New Jersey state experiment station.

"Fresh air is the greatest enemy of tuberculosis. Furthermore, an abundant supply of fresh air drives out all unpleasant odors and thereby prevents them from tainting the milk. Thus, an abundant supply of fresh air is just as important for economical milk production as is proper feed."

"Various ventilating systems are on the market, all of which work on the principle of expansion and contraction. Warm air expands and becomes lighter than an equal volume of cold contracted air. The warm air, therefore, rises and the cold air descends."

"A proper ventilating system must provide for the entrance of fresh air and the exit of foul air in such a way that the warmth of the barn is preserved and the air kept pure and about as warm at the feet as at the heads of the animals. A cow weighing a thousand pounds inhales 224 pounds of air in 24 hours—nearly twice the weight of her food and drink. This is at the rate of 3.542 cubic feet per hour."

Haphazard ventilation may result either in the cows not getting enough air to supply their requirements or getting it in a way which chills them, thus making them susceptible to disease and reducing their milk flow.

"Farmers desiring information on good methods of ventilation may get it by writing to the New Jersey State College of Agriculture, New Brunswick."

Sunning Rack for Milk Cans Is Best Sterilizer

The sun is the cheapest as well as the best sterilizer we can use. A rack for milk cans and pails can be built cheaply and easily so that the cans

will receive the full sun's rays, says Power Farming. The framework is two-by-fours and braces one-by-fours. The construction is shown in the sketch.

High Feed Bills Do Not Indicate Small Profits

High feed bills do not necessarily indicate small profits from milk cows. Take, for example, the high cow in an Iowa test association last year. Her feed bill amounted to \$54.68, but she returned her owner a profit of \$12,038. The lowest record in the same association was made by a cow of mixed breeding whose feed cost was \$1,485. Her owner's profit was \$5.39 for the year.

It is possible the low cow did not have the ability to return a good profit even though she had received a generous ration. However, a cow is like a cupboard, you can't take anything out unless you put something in. The ideal arrangement is, of course, good cows well fed.

Develop Calf Early if Thought Worth Raising

The young calf is often neglected. If a calf is worth raising develop it early. It is best to leave it with the cow for two or three days. Then feed it about nine or ten pounds of warm milk per day. Always see that your buckets are clean, in order to prevent scours. At about three weeks of age start substituting skim milk gradually. The calf should be on skim milk alone by the time it is seven weeks old.

Expensive Dairy Barns Not Requisite for Milk

Expensive dairy barns and equipment will probably make dairying more interesting, and increase somewhat the year's total production, but are not a requisite for success. Many great dairy cows have been developed and have produced wonderful records in barns that would not measure up to the standard so far as up-to-date dairy barns go.

Make Fall Pigs Profitable

To make fall pigs profitable it is absolutely essential to make them comfortable. The fall pig must be handled very differently in winter as compared to the spring pig in summer because the conditions are so different.

Mangels for Cattle.
Mangels have been more generally grown for feeding to cattle because they stand well out of the ground, are easily cultivated and harvested, and keep better in winter than do sugar beets.

WRIGLEYS

After every meal

A pleasant and agreeable sweet and a 1-a-v-1-t-a-g benefit as well.

Good for teeth, breath and digestion.

Makes the next cigar taste better.

Sealed in its Purity Package

WRIGLEYS SPEARMINT
THE PERFECT GUM
MINT LEAF FLAVOR

Gold in Black Mud.
Gold valued at \$1,806.89 was recovered from a trunkful of black mud purchased at a sale of unclaimed express by a buyer in Omaha, Neb., who was ridiculed for his purchase until a chemist's analysis proved its value.

People of Tasmania.
They are 79.2 per cent native Tasmanians, 11.5 natives of the United Kingdom and 7.3 natives of other Australasian colonies. There are 600 or 700 colored aliens and about 250 half-caste aboriginals.

Reap the Reward of Perfect Health

Salem, Ore.—"Thru heavy lifting I developed a severe case of feminine weakness. I suffered with backaches and bearing pains. I got so weak I could not do any work, I would get very severe dizzy spells and the least excitement I would faint dead away. I was so nervous I could not stand any noise, could not sleep, and had very little appetite. I went down in weight from 118 pounds to 96. I was a physical wreck when I began taking Dr. Pierce's Favorite Prescription but thru the persistent use of this wonderful woman's medicine I was completely relieved of my ailment and restored to perfect health. I gained in weight and never felt better than after taking the 'Favorite Prescription.'"—Mrs. Elizabeth Zander, 1370 Norway St.

Your health is your most important asset. So why not write Dr. Pierce, President 'Invalids' Hotel Buffalo, N. Y., and receive confidential medical advice free, or send 10c for trial pkg. tablets.

Pioneer Building for Oregon Urged

Erection of a building to the memory of the Oregon pioneers, which would provide a meeting place for patriotic organizations as well as house the valuable exhibit of the Oregon Historical society, was suggested at the annual meeting of the Sons and Daughters of Oregon Pioneers at their Admission day banquet at the chamber of commerce rooms in Portland last week, where 400 of the descendants of the earliest Oregonians commemorated the state's 65th anniversary.

The Final Goal.

Oh, yet we trust that, somehow, good will be the final goal of ill, that nothing walks with airless feet, that not one life shall be destroyed, or cast as rubbish to the void, when God has made the pile complete.—Tennyson.

Valuable Material for Doors.

Many of the fifteen-foot-high doors and portals to Havana houses are built of solid mahogany and other richly colored native woods.

Sea-Water Gold Unprofitable.

Average amount of gold in sea water is one ounce to 31,000 tons of water, but as it is in the "colloidal" state, the cost of production is about twenty times the market price of the metal.
