Famous Cartoonist Now Drawing for This Paper

SATTERFIELD AND HIS BEAR

Robert "Bob" Satterfield, one of America's greatest cartoonists, is now drawing cartoons for this newspaper. In all Satterfield cartoons is his famous little "Teddy Bear" mascot, which is known to millions of newspaper readers. Mr. Satterfield has just signed a contract with The Publishers Autocaster Service of New York, which makes him one of the highest priced cartoonists in the United States. This newspaper has exclusive membership in that service.

One, Two, Three, Fighting Roosevelt Faces

Young Teddy III has taken up boxing at Washington "and he's a chip," says the instructor. Arranged here with photos of daddy Theo. II and grand-daddy T. R. he runs true to form.

TOWN SEEKS TOURIST TRADE

Creede, Colo., Once Scene of Great Boom, Begins Struggle for Existence.

The story of the struggle of a small mining town in Colorado for existence has just been told by the Department of the Interior. It is of Creede, in the midst of the great mountain group called San Juan mountains, near the Rio Grande, just below the picturesque canyon of Willow Creek. The citizens of Creede are now doing their best to make their town a stopping place for tourists, to offset the decline in mining.

The first mining claims in the Creede district, as stated in a report by the Department of the Interior, through the geological survey, were located in 1883, but the great boom, which rivaled anything in the early history of other mining districts, did not begin until late in 1891, when perhaps 10,000 people rushed to the camp, a railroad was extended to it and the small amount of flat land available in the deep canyon was built up almost solidly. Early in the following year a disastrous fire destroyed most of the new city. The city was rebuilt, but the boom subsided almost as rapidly as it had grown.

It was in June, 1891, that two prospectors, Theodore Renninger and Julius Haas, grubstaked by two butchers of Del Norte, set out to prospect the Creede region. It is said that the search for their strayed burros led Renninger to the outcrop on the famous Last Chance claim. The poor surface indications led him to define his claim the "Last Chance." A short time later he sold his share in it for \$65,000, but by December, 1892, the mine had produced silver and other ore valued at nearly \$1,500,000.

After the great boom the district settled down to a more regular existence and has produced metals valued at more than \$40,000,000, about half of which was distributed as profits. The metal produced in largest quantity is silver, which makes up about two-thirds of the total value of the metallic output. Lead makes about one-fifth and gold about one-fifteenth. Most of the metal mined was taken from a single vein which extends along a great fault or earthquake rift that is several miles long and cuts volcanic rocks. Many thousand years ago the rocks on one side of this fault were dropped down more than 1,500 feet. A mining tunnel follows this vein for about two miles. Some ore has been produced from other veins, most of which extend along faults.

O. A. C. Man Tests Milk

The following is a letter received by Young Brothers Dairy in regard to some samples of milk sent to the Extension department of O. A. C. for testing:	1. 500 per c. c.	4.9
	2. 800 per c. c.	4.5
	3. 1500 per c. c.	4.6

If these are representative samples of your milk supply you ought to be congratulated for the tests show excellent quality from a bacterial standpoint, also from a butterfat content standpoint.

COUNTING THE "BEATS" IN A CARPET BEATER

RADIO HINTS

BY WHIT HADLEY

It will be static season in two weeks. Put a lightning arrestor on your aerial. Remember, lightning is NOT attracted by an aerial. The arrestor is to discharge any excessive electrical charge accumulated in the atmosphere to its shortest path, which is the ground.

Your plain variable condenser can be made into a vernier type by adding a small vernier control, sold by all radio dealers.

You cannot get too expensive or good a rheostat, or a grid. The best is far the cheapest.

If your antenna is stretched across a city apartment house roof, and the roof has a tin covering, or if water pipes or water drainways pass under the antenna, your antenna is only as distant from the ground as the tin roof, the water pipes or the water runways.

Hurry will never get you anywhere. Therefore, when you hook up a radio set, take your time and do it very carefully and slowly. Guard particularly against the plates in your condenser touching each other.

If you suffer from body interference when your fingers touch the knobs on the panel, place a shield of tin-foil or thin copper directly behind the knobs on the

inside of the panel and ground them by soldering them to the ground wire. Shields can be held to the panel by shellac.

The bugaboo of soldering has brought about another device for making quick and sure connections. It is a small semi-circle of brass, which will make a firm and instant connection for as many as six wires. This is specially valuable when you find it necessary to reverse wires to get the best out of a set. The new brass clip is being sold everywhere.

Sounded Familiar.

"I see a dancer has gotten a divorce on account of insults. The insults consisted in her husband asking her to leave him in peace."

"Is that grounds for a divorce?" asked ma.—Louisville Courier-Journal

U. S. EXPERTS LEAD WAR ON FOOT AND MOUTH DISEASE

This is Dr. U. G. Houck of the United States Bureau of Animal Industry, (left) who has been placed by Secretary Wallace in complete command of the fight being effectively waged on the foot and mouth disease outbreak in California, and G. H. Hecke, director Department of Agriculture, State of California, who is assisting Dr. Houck in quickly and permanently stamping out the epidemic.

SACRAMENTO, CALIF.—The full force of the United States government has been brought into play effectively against the foot and mouth disease in California. The disease has been confined to certain limited districts in the state and the work of stamping it out is proceeding rigorously under the direction of Dr. U. G. Houck, personal representative of Secretary Wallace, department of agriculture, who has complete control of the combined federal and state forces.

"Every method justified by our past experience and by scientific study is being used to prevent any possibility of spread of the disease and to wipe it out so thoroughly that there will be no chance of its recurrence," said Dr. Houck.

"There is no danger of spread of the disease through shipment of fruits, vegetables or dairy products from the great non-infected areas of California. We know of no instance where the disease has been carried by such shipments," Dr. Houck said.

Complete confidence in the men in the field was expressed by Dr. J. R. Mohler, chief of the bureau of animal industry, United States department of agriculture, in a message he has just sent to Dr. Houck and the local federal inspectors.

"We have in California," he said, "the best equipped force of inspectors that was ever assembled on a foot and mouth detail.

"Our methods are not experimental, but have been weighed in the balance of practical experience and have always produced the desired results."
